Preface

The present work is an attempt to edit and translate the first part of the Mālinī-slokavārttika, which deals with the origin of the Śaiva revelation. This text is, as its name indicates, a versified commentary on the Mālinīvijayottaratantra and was composed by the Kashmirian philosopher Abhinavagupta, whose literary activity must have centred around the end of the 10th and the beginning of the 11th century AD. It is written in a style which sometimes looks simple, but never is, and the high degree of abstraction it displays combines with the bad state of the transmitted text to present a formidable task to every reader. As this case proves, only initial naivety and the commitment to finishing a degree in a predetermined time can persuade one to pursue such a work. Even if it is not stated at every other verse, my interpretation cannot be anything but provisional. Nevertheless it is, I think, useful to make this attempt, because the text is important for further studies of Abhinavagupta's concept of the Śaiva canon.

The greater part of this work was completed during a one and a half year stay in Oxford, where I had the opportunity to discuss approximately half of my edition and translation as well as many issues relating to the interpretation of this text with Professor Alexis Sanderson of All Souls College. He very generously made available to me some of his unpublished articles and drew my attention to many of the sources utilized in this thesis; it is no exaggeration to say that without his guidance this work would have been impossible.

I also wish to thank Professor Michael Hahn to whom I owe most of my philological training in Sanskrit and who took upon himself the supervision of this doctorate. His unfailing support in every stage was crucial to the completion of this thesis.

For creating the lively and stimulating atmosphere in Oxford I would like to thank my fellow students, especially my colleague and friend Dr. Dominic Goodall, not only for numerous discussions on Saiva matters, but also for proof-reading and improving the English, Dr. Harunaga Isaacson, especially for his close inspection of my edition, and Somdev Vasudeva for his comments; furthermore, in chronological order, Dr. Johannes Schneider (Berlin), Dr. Jayandra Soni (Marburg), Dr. Peri Sarveshvara Sharma (Marburg) and Prof. Walter Slaje

Preface

.

(Halle), and Philipp Maas, M.A., all of whom contributed to this work through valuable suggestions.

Finally I wish to thank Prof. Raffaelle Torella, who was the external supervisor for the doctoral thesis, and who provided me with a substantial list of corrections that helped a great deal to improve the present edition.

I should also like to thank B.P. Sharma, Jammu, who has been so kind as to provide me with copies of the two manuscripts, to the Niedersächsische Staatsund Universitätsbibliothek, Göttingen, and the Bodleian Library, Oxford, for the permission to use their manuscripts for the present publication.

Introduction

Chapter 1 The Śaiva Revelation

The first part of the $M\bar{a}lim[sloka]v\bar{a}rttika^1$ deals with the origin of the five streams $(pa\bar{n}casrotas)$ of Śaiva revelation $(saivas\bar{a}stra)$, that is, with the divisions and hierarchies of the texts taught by Śiva. In order to understand the position of this religion in what we are used to call Hinduism, as well as the context of the $V\bar{a}rttika$, some preliminary considerations may prove useful.

Since the term 'Hinduism' as a modern creation is not considered sufficient for the description of Indian religions in a historical perspective, a distinction between Vedism or Vedic religion, Vaisnavism and Saivism is sometimes adopted in textbooks on "Hinduism". The first term is unfortunately confusing, for the word "Vedic" is used by medieval Indian exegetes not as a historical term, but as denoting one, namely the orthodox, 3 segment of Indian religions. One of the main criteria that defined the position of "sects" or "religions" in India was their position relative to orthopraxy, i.e. to the "vedic" religion. Acceptance of it was demonstrated through the practice of a social religion based on exegesis of a twofold canon of scriptures, "vedic" literature (śruti) and the more elastic category of smrti. Because of their abandonment of orthopraxy - for instance through rejecting caste - certain religious groups, like the Buddhists or Jainas, were considered to be "un-vedic" (vedabāhya). For the orthodox, even Śaivas and Pāñcarātrikas were vedabāhya - and therefore not fundamentally different from the Buddhist - as they based their system on scriptures that were revealed by Siva or Visnu and disputed the authority

¹ See 3.1. for the names of this text and Appendix 3 for the abbreviations used.

² The term śāstra is sometimes used in the singular to describe "scripture" itself. Despite the fact that oral traditions play a great role in Indian literature, I am using the word "scripture", since on the lowest level of revelation the śāstra is a written document, even if it is supposed to be learnt by heart.

³ I have usually followed the convention to use "orthopraxy" instead of "orthodoxy" in order to emphasize that not so much belief in, but practice of a specific cult is the defining characteristic; nevertheless I do not feel competent to coin a new adjective.

of the Veda. 4 In order to maintain their position, the Tantrics had to clarify of the Veda. In the Veda. Yāmunācārya therefore differentiates between several meanings of vedabāhya: "Is it just to be different from the Veda, to perform acts prohibited by the Veda, or to hate the Veda?" He then shows that none of these apply to his system, the Päñcarātra, but argues that it is the absence of a secular law that complicates the issue: some Vedic injunctions, like non-violence, apply to all parts of society and not only to the higher castes that are usually thought to be the addressee of Vedic injunctions. Otherwise brahmin-murder would not be a crime for an outcast to whom the Veda does not apply.

In this context the term "Śaivism" unavoidably occludes as much as it defines, for an important segment of Saivism is un-vedic in as much as it is based on a group of scriptures, the Tantras, which are held to be superior to the Veda 6 There is in fact a wide range of cults, some of which accept the Veda while others include it as a lower and soteriologically ineffective revelation. The generally compromising position with regard to the Veda, however nominal in nature. is perhaps sufficient to justify the inclusion of Saivism as a whole into "Hinduism". Abhinavagupta's own philosophy is certainly among the moderate majority of Śaiva cults that would not openly contradict orthopraxy, i.e. conformity to the rules of caste, purity and the like, but deny its efficacy in securing liberation. Such a position was explained, for instance, by the following line of reasoning: God, in order to preserve a functioning society, created lower scriptures that teach these behavioural rules and support them with the promise of reward. Proof for this is, according to Abhinavagupta's school, that the "wise men" who propagated these rules did not necessarily conform to them: "One should not do what they do, but do what they say."7-

In order to clarify the matter we have to distinguish at least between a Veda-

congruent devotion to Siva, as represented by the Saivism of the Puranas on the one hand, and Tantric Śaivism on the other. The word "Śaiva" for the latter then does not mean "a worshipper of Śiva", but one who follows a scripture taught by Śiva. 8 This distinction is crucial, because the fact that some Śaivas adhered to a system of worship with a predominantly female pantheon was not sufficient to rank them in a different religious category.9

These are however only outlines that facilitate the understanding of the complicated processes of adaptation on both sides. For, in reality, the distinctions are blurred by attempts on the side of these Tantric traditions to subsume Vedic religion, as well as by the efforts of the more conservative to integrate. Tantrism into orthodoxy; the most striking example for the latter is probably the cult of the Śrīvidyā which, although it started as a scripture associated with the Bhairava canon, was integrated into the system propagated by the Śańkarite order at Śrńgeri, which is today one of the safeguards of orthodox Hinduism. 10

If we exclude the Saivism of the Purānas and the Sivadharma, we arrive at a twofold distinction, namely between the so-called Atimarga and the Mantramarga. The Atimarga is more or less identical with Pasupata Saivism of different kinds, whereas the Mantramarga contains Tantric Saivism with its subdivisions. 11 In Abhinavagupta's time the main distinction within Tantric Śaivism was the dichotomy that subsisted within the Mantramārga between the (Śaiva-)Siddhānta and the non-dualistic schools. 12 The Siddhānta adhered

⁴ Cf. Agamaprāmānya, p. 53; šaivam pāšupatam caiva bauddham apy ārhatam tathā | kāpālam päñcarátram cety evam pásandatásmrtéh || valdikam tántrikam ceti vibhágakaranád api | gamyate pañcarātrasya vedabāhyatvaniścayah ||

⁵ kim anga vedād anyatvam vedabāhyatvam ucyate || tannişiddhārthakāritvam āho taddve-

^{6.} The fact that (Tantric) Saivism is defined by its unique revelation has not been recognized properly. Older textbooks on Hinduism or Saivism often conflate Puranic and Tantric descriptions of Siva and thereby fail to communicate the historical background characterized by an interaction of Tantric and Vedic elements. To state that the formless Siva (niskala) "is the Highest Brahman of the Vedantins" (GONDA (1976), p. 48) may explain the concept by analogy, but could not be more misleading when it comes to the relative position of Vedanta 3 yal te kuryur na tat kuryûd yad brûyus tat samācaret | See TĀ 4,244 with Viveka and 37.9.

⁸ See SANDERSON (1996), who refers to Astadhyāyī 4.3.101, 4.2.59 and 4.2.64. The derivation would be something like the following: sivena proktam = saivam. saivam adhīte =

⁹ See SANDERSON (1990a), p.128, and commentary on 191cd-194ab. Unfortunately the matter is complicated by the doctrine of a non-dualism of power (śāktādvaita) that was propagated by some Śaivas, but was contested by others. Saiddhāntikas like Nārāyanakantha unsurprisingly deny that Śāktas are still Śaivas (Vrtti on Mrgendratantra, caryāpāda, 1.2). But also Somānanda, in the third chapter of his Śivadrsti, criticises those Śaivas, who are "saktivādinah": if power is, out of devotion, extolled as if it were the highest deity, this is, as he says, unproblematic, because Siva and Sakti are inseparable. But he too makes the point that some Śāktas are no more Śaivas, despite being rooted in the same tradition and being non-dualists! If we look at Brhadvimarśinī, vol. 3, p. 331, where Abhinavagupta glosses viśeṣadarśana as śāktādvaita, we can only conclude with SANDERSON that the core of Abhinavagupta's philosophy must be called Sakta and that much of his exegetical effort is devoted to veiling this fact.

¹⁰ See SAWAI (1992).

¹¹ For the following, see SANDERSON (1995), p. 19f.

¹² In this thesis the term Siddhanta refers to the Kashmirian predecessors of the Tamilian Śaiva Siddhānta, i.e. to Sadyojyotis, Nārāyanakantha and Rāmakantha II (sadyojyotihpāda-

to a strictly dualist doctrine according to which Siva is merely the efficient to a strictly dual to a strictly levels of the universe. He is distinct from the souls and the world. "The soul is all-pervasive, eternal and equals Siva, [but] its Siva-nature is obstructed by mala. With its Siva-nature confined by that, it cannot know or act without a means. This [soul] which is dependent on means of experience acquires [for that reason a further] bond which is called māyā and consists [of the tattvas] kalā etc. [which are their products]. Māyā is the womb of the world,"13 Since mala was conceived of as a substance, it could, according to the Saiddhāntikas. only be removed through an action: the ritual of initiation which removes the veil and secures final liberation at death with the falling away of the remaining bonds. For Abhinavagupta's non-dualist school the soul is identical with Śiva and has only to recognize this fact in an act of intuition in order to be liberated. All the distinctions made by the Siddhanta are ultimately unreal. for there is only the one reality called Siva. Whereas the dualistic Siddhanta rejected the non-dualistic schools, the latter included the former as a lower form of revelation. The inclusivist hierarchy of Abhinavagupta's school aimed at explaining the whole spectrum of 'religions', since it included not only the Pāśupatas and the Siddhānta, but also Buddhist philosophy, Yoga and the like. In theory the relative position of a religion could be deduced from its doctrinal standpoint, 14 but - in the case of Saiva schools - more importantly from its basic ritual structure. If we rank the Saiva cults according to increasing heterodoxy, we can see that the defining characteristic in their pantheon is the degree to which female and ferocious deities come to the foreground. On the lower end of the scale, in the Siddhanta, only the consortless mild Sadasiva is

rāmakanṭhanārāyaṇakanṭhāghoraśivādivākyānusāreṇa ..., Sataratnasamgraha, p. 2). It must be emphasized that the distinction is not between a Northern Tantric Śaivism and a Southern Āgamic Śaivism. Nor is it the case that "Āgama" refers to dualistic scriptures and "Tantra" to monistic ones, neither by meaning, nor by their relative frequency in the primary literature (GOODALL (1995), p. xiv). Both are in fact interchangeable terms that primary literature (GOODALL (1995), p. xiv). Both are in fact interchangeable terms that are merely differentiated by the second meaning of āgama, namely in the sense of āgama-pramāṇa (see below), and by the pejorative use of 'Tantra' for magic. Nor is it true that pramāṇa (see below), and by the pejorative use of 'Tantra' for magic. Nor is it true that pramāṇa (see below), and by the pejorative use of 'Tantra' for magic. worshipped – his power being personified in his throne – a in the Krama, the most heterodox of the Kashmirian cults of our author's time, the ritual centres on groups of female, ferocious deities. We arrive at the following sequence; the Siddhānta; the cult of Netranātha represented by the Netratantra; the cult of Svacchandatharava based on the authority of the Svacchandatharava; the Trika with its sub-levels; and finally the Krama. The internal logic of this series is the notion that an increase of heterodoxy marks an increase of power and soteriological efficacy. One might wonder why Abhinavagupta did not base his exegesis on the Krama, which is on the top end of the scale of esotericism, but on the Trika. The reason is probably that the Krama would stand in too glaring contradiction to the Siddhānta to be a convincing model for the whole Saiva revelation, whereas the Trika with its multitude of levels could be seen to encompass a variety of cults.

It is true that the esoteric Śaivas saw their non-dualistic theory and practice as a mode that was superior to the Śaiva-Siddhānta, and even more so to the Vedic religion. But this superiority was apparently not something to be demonstrated by directly challenging "external" religion; according to the famous dictum that one should be "inwardly a Kaula, a Śaiva to the outside and a Vaidika in one's daily life", ²⁰ one was supposed to keep one's true religious identity secret. Since Tantric practice was essentially private and not a cult performed in the temple, the actual practice of an initiate would not be observed by the public. In other words, the practitioner envisaged by Abhinavagupta would probably have been known to be an initiated Śaiva, but would not appear different from other Śaiva Brahmins. He would regard himself to be beyond the limitations to which his peers were subjected, but he would not upset them by obviously violating their social code; he would be sure that his liberation would not depend, for instance, on him remaining pure by not eating with outcasts, but he would probably not advocate such a behaviour.

The term Śaivism is thus used collectively for two types of religious systems, Vedic and Tantric. For the orthodox any Tantric practice was to be rejected on the grounds that it disqualified for orthopraxy by ritually removing caste in initiation (jātyuddharaṇa), ²¹ and that their ritual overstepped the boundaries of pu-

a Souts-Indian Krama and Trika (SANDERSON (19900), p. 20).

²¹ The argument reported by Yāmunācārya is analogous: tantric dīkṣā proves that the

rity, namely by contact with people of lower castes and by eating and drinking my, namely by confact the more esoteric Tantric Saivas this insistence on purity impure substances. Visuality invalid, but also the very cause for bondage and therewas not only under-fore to be transcended. Again, these are distinctions that enable us to understand the mechanism of mutual adaptation and rejection; in reality we may not even find two completely separate and mutually opposing systems of worship, namely Vaidika and Tantrika, at any time in history, but a variety of compromises. If we take, for instance, ²² the Kaula injunction to offer and drink alcohol at the daily ritual we can see, even in our author's time, different approaches and reactions: on the one hand the Kaula attitude itself, according to which the status of the practitioner depends on the consumption of alcohol, just as the status of the orthodox on the avoidance of it; then a form of compromise, in which water is substituted for alcohol, and finally the rejection of this watered-down practice by the Kaulas themselves. In other words, we might, on the level of theoretical discourse, always find the whole spectrum between ortho- and heteropraxy, mutual adaption and rejection. 23

I Introduction

1.1 The Validity of Non-vedic Revelation

We saw that the defining characteristic of Tantric Saivism was a canon of scriptures that was different from Vedic revelation (śruti) and from the group of sect-neutral scriptures (smrti). The texts in this canon were called Tantras and, with the connotation of providing the highest authority, Agamas, Just as

the claim to superiority was inherent in the self-description of the dualistic system as Siddhanta, ²⁴ i.e. "valid doctrine", or "the definite answer to all other systems", 25 the word Agama suggested that texts that were revealed by Siva could claim highest authority. The definition of the word agama or sabda in logic²⁶ as instruction by someone trustworthy was applied to the scriptures spoken by Śiva, Visnu, Sūrya etc.

Despite all considerations of hierarchy within the Saiva revelation and attacks on the dualistic Siddhānta, Tantric Śaivism as a whole had to assert its validity against Vedic orthodoxy and we fortunately have a witness of this process only one century before Abhinavagupta. The Kashmirian logician Jayanta Bhatta deals with the validity of non-vedic revelations in two of his works, the Nyāyamañjarī (āhnika 4, āgamaprāmānyanirūpanam) and the Agamadambara.27 Jayanta Bhatta was in favour of an acceptance of the Śaiva Āgamas, but describes several hypothetical positions with regard to the validity of different Agamas, including those of the Buddhists. Even the least compromising position that demands congruence to the Veda for any scripture to be valid and therefore excludes Buddhist scripture does not reject the Śaivāgamas:

"But the scriptures other [than Śruti and Smrti] that are thought to be valid, 28 of which we know (yāni paridrśyante), are of two kinds: some proceed in complete contradiction to the Veda - like those of the Buddha etc. -, others through teaching rites that are formed without contradiction to it 29 - like those taught by Siva etc. Among these we teach the validity of the Śaiva scriptures [for the following reasons:] we do not perceive the many defilements that are the cause for doubt and contradiction in the knowledge created by it; it is proved by the Smrti and inference that they too were created by God; it is impossible to imagine another cause [for them] like greed, delusion etc; [...] and they do not exist in opposition to the Veda, because they do not discard the activities [peculiar] to the four

Pañcarátra is vedabāhya. upanayanādisaṃskṛtānāṃ bhagavadārādhanārthatayā dīkṣālaksanasamskāravidhānād avaidikatvam iti, Āgamaprāmānya, p. 105. Similarly in the case of the Saivas: kimca śaivādayo vedasiddhavarnāśramād bahih | kalpayanty āśramādīni tato 'pi śrutibāhyatā | Āgamaprāmānya, p. 96.

²² See commentary on 42-45.

²³ Even a contemporary introduction to a handbook of Śrīvidyā worship introduces the five makāras as the difficult path through which the devotee can easily fall and therefore advocates the "pure worship" taught by Śańkara, so-called because all impure elements are substituted by unproblematic ones: fruit-juice for alcohol and the like. See introduction to Srīkarapātrasvāmi-viracitā Śrīvidyā-varivasyā. Ed. Dattātreyānandanāthaḥ, Vārāṇāsī: Srividyāsādhanapītham saṃvat 2048, p. 29f: tantrašāstrom mem 'madya, māṇsa, matsya, mudrā, aur mauhuna' ina pañca makārom se pūjana kā vidhāna varnita hai | ...parantu saha badā hī kathina mārga hai | isameṃ kiñcit bhī asāvadhānī hone se niścita hī patana ho jatā hai ...isake sthāna para dugdha, phalarasa tathā sugandhi dravyom se mišrita sativika dravyom se arcana karanā hī hitakāraka hai | isase patana kā bhaya nahīṃ hai awa sarvatomukhi kalyana hi hota hai | jagadguru adya sankaracarya ke dvara pravati tita tantra-mārga mem sāttvika upāsanā kā upadeša hai

²⁴ siddhāntašabdah pankajādišabdavad yogarūdhyā šīvapraņītesu kāmikādisu dašāstadaśasu tantresu prasiddhah, Ratnatrayollekha 10-12.

²⁵ siddhānta eva siddhāntāh pūrvapaksās tatah pare | Ratnatrayaparīkṣā 11ab.

²⁶ According to the Nyāyasūtra 1.1.7: āptopadeśaḥ śabdaḥ.

²⁷ For a detailed discussion of Jayanta's position, see WEZLER (1976).

²⁸ āgama here means 'potential' Āgamas, scriptures the validity of which is to be examined.

²⁹ At the moment I see no other possibility than to construe kalpita- with the preceding instrumental. One could also consider emending to kalpavratāntaropadešīni and construe the instrumental adverbially.

castes and other [rules] known from the Veda."30

The author then discusses other, more inclusivist models that hold the Buddhist and even all Āgamas as valid and there is — as far as I can see — no clear statement of the author's opinion up to this point. Only an objection points the way to Jayanta Bhaṭṭa's conclusion: "If the validity of all Āgamas is proved in this way, then even I might compose an Āgama today and even its validity would be recognized within a few days." Someone might also try to cheat people by proclaiming something "written in an old manuscript as a great Āgama." Antiquity is therefore not useful in establishing validity and the criteria that our author considers appropriate are the following:

"Those scriptures that have acquired fame among a large number of respectable persons, that have been accepted by many people of high learning, that do not appear unprecedented although they thrive [only] these days, that are not motivated by greed etc., that people do not detest, the validity of those scriptures is accepted here." ³³

He then refers to the *nīlāmbaravrata* as "a doctrine of procurers which cannot be tolerated." ³⁴ This sect, whose practice it was to copulate more or less publicly—only wrapped in a black blanket—must, according to Jayanta, have been created by lechers and has therefore been prohibited by the king as unprecedented. This corroborates the *Āgamaḍambara*'s description of the settlement of a religious conflict in Kashmir during Jayanta Bhatta's lifetime. ³⁵ If this play is a more or less historical description of this religious controversy, then Jayanta

Bhaṭṭa's opinion could be a representative outside view of Tantric Śaivism not too far from Abhinavagupta's lifetime.

How the Siddhanta viewed the same issue in Abhinavagupta's time can be gleaned from Bhatta Rāmakantha's works. He reiterates an argument that is also used by Jayanta Bhatta: "Thus it would follow that the Vedas are to be accepted as valid only because they are composed by an omniscient being and therefore all Agamas would be valid."36 And he adds: "This is true. Even they are valid sources of knowledge, but they are not created by an omniscient being, because of their mutual contradiction." 37 For Rāmakantha even scriptures that are taught by beings not equipped with omniscience can be valid, but only scriptures taught by the omniscient Siva are not contradicted by other doctrines. We may assume that the proof for this is the one already given by Sadyojyotis: "The Saiva [scripture] is one that elucidates the particular nature of Pasu, Pasa and other [doctrines 38], and is uncontradicted [...]."39 Thus the Śaivaśāstra is the supreme revelation, because it cannot be contradicted by others. Abhinavagupta would probably agree, but for him the relationship between the levels inside Saivism is regulated by the doctrine of "general" (sāmānva) and "special" (viśesa) scriptures, according to which any rule of a more special scripture would cancel a conflicting rule of the more general one. And here the Siddhanta is of course on a comparatively general level.

Before dealing with the details of his theology of revelation, we shall summarize the pan-Śaiva account of the creation of the Śāstra by Śiva.

1.2 Śiva's 'Body'

It is difficult to ascertain how Śaiva theology conceived the production of scripture by Śiva, i.e. to which degree the abstract description given by Abhinavagupta in the *Vārttika* was meant to evoke the popular image of Śiva speaking to Pārvatī. ⁴⁰ Although such a model of communication is inherent in the dialogue form of the Tantras and in the accounts of the descent of the Śāstra into

³⁰ yāni punar āgamāntarāņi paridrýyante, tāny api dvividhāni – kānicit sarvātmanā vedavirodhenaiva pravartante bauddhādivat | kānicit tadavirodhenaiva kalpitavratāntaropadešīni śaivādivat || tatra śaivāgamānām tāvat prāmānyam brāmahe, tadupajanitāyāh pratīteh samdehabādhakāranakālusyakatlāpasyānupalambhāt | īšvarakartṛkatvasya tatrāpi smṛtyanumānābhyām siddhatvāt | mūlāntarasya lobhamohādeh kalpayitum aśakyatvāt,...na ca vedapratipakṣatayā teṣām avasthānam vedaprasiddhacāturvamyādivyayahārāparityāgāt, Nyāyamañjarī, p. 635.

1 The Saiva Revelation

the human realm through different divine and semi-divine beings, it is also clear that the mythology of deities plays no important role in Tantric Saivism. Basically Tantric Saiva practice is not a cult of images, but a cult of mantras and cally randic sand property of descriptions of aspects of deities do not involve mythology as known from Purāṇas. 41 For the Śaiva practitioner the iconic form of a deity is subordinate to the mantras that 'express' it.

Consequently Abhinavagupta's depiction of the "five streams (pañcasrotas)" of Saiva revelation as mantras or powers which are the sources of the knowledge that becomes the scriptures, is not an artificially abstract version of a five-headed Siva teaching an Agama, but more faithful to his sources than would be a mythological account. For instance the Mrgendratantra describes the body of Śiva that is made of power (śāktam vapus) in order to explain how God creates the world as follows:

"His body, starting from the head, is made of five mantras that are conducive to the five acts, namely Īśāna (īśa), Tatpuruṣa, Aghora, Vāmaldeval

In his commentary Nārāyaṇakaṇtha provides the identification of the five mantras with the five acts and a nirukti of vapus. He also adds, in his commentary on the next verse, a quotation from the Pauskaratantra according to which the purpose of Siva's body is to present the practitioner with an object for his worship. The text then describes how the five mantras form Siva's body:

"The supreme quality through which he governs the whole universe is called [figuratively] the head, because it occupies a similarly high position; 43 it is not a part of the body. 44

Narayanakantha notes that the 'quality', i.e. the mantra of 16ana, is supreme, because it is the topmost of all the streams of Saiva scripture with their subdivisions, and therefore resembles the head. The subsequent verses up to 15 describe the other parts of the 'body' of the ultimately bodiless God.

It is conspicuous that the Tantra itself tries to empty the names of the parts of the body through nirvacanas of their literal meaning: the 'head' is not really a part of the body, but only īśāna functioning as the supreme. This approach. which we rather expect from a philosopher who wishes to reinterpret terms to fit his own reading of the doctrine, is in fact quite appropriate for this theology, in which deities are first of all mantras. Only in a second step are these mantras used to create a form for the formless Siva, be it for the benefit of the practitioner, or for Siva himself in order to manifest the world, or to create the scriptures. In other words, one talks of the mantras as faces, not vice versa,

The connection between the names (īśāna, tatpurusa, aghora, vāmadeva and sadyojāta) and the parts of the body in the construction of Siva's form becomes clear, when we look at the form of these mantras:

om hom īśānamūrdhne namah om hem tatpurusavaktrāya namah om hum aghorahrdayāya namah om him vämadevaguhyäya namah om ham sadyojātamūrtaye namah45

Since these mantras are used to purify the corresponding parts of the body by dusting them with ash, 46 they are, from the perspective of the ritual, indeed associated with parts of the worshipper's, and therefore Siva's, body.

This pentad is correlated with many other sets of five, like the 'five acts': creation (srsti), persistence (sthiti), resorption (samhāra), obscuration (tirodhāna), and showing grace (anugraha) through bestowing liberation. Especially the correlation to the five "cause-deities" (kāraneśvara) is important

⁴¹ Compare for instance the description of the five faces given below with the Śnapuraja's account of the descent of the five faces, in which they are treated as mythological manifes tations of Śiva; Śivapurāṇa, p. 204 (=Śatarudrasamhitā, 1. chapter: pañcabrahmāvabb-

⁴² tadvapuh pañcabhir mantraih pañcakrtyopayogibhih || Hatatpuruṣāghoravāmājair mat sakādikam | Mrgendratantra, vidyāpāda, 1.3.8cd-9ab. Similar passages could probably be found in most Tantras of the Siddhanta, see, for instance, Matangaparametrara, vidy and 4.14-15sh, and in an unpublished recension of the Kölottaratantra, called Jianapok 1613 NGMPP B 118/7 ("Kālottaratantra").

⁴³ Lit.: "because it is in the same place as the head".

⁴⁴ liste sena jazot sarvam gunenoparisartinā | sa mūrdhasamadešatvān mūrdhā nāsapada

⁴⁵ See BRUNNER (1986), p. 93. KREISEL (1986), p. 59, fn. 190, has tried to explain the sequence starting with Isana as a reversal of the Vedic sequence (starting with Sadyojāta) in order to suit the cremation ritual. It is in fact the normal form of these mantras in Tantric Śajvism.

⁴⁶ See Somašambhupaddhati, 1.39: Išatatpurusāghoraguhyakājātašambaraih | kramenoddhülayen mürdhavaktrahrdguhyavigrahän | On sambaraih the editors of the text in the Kashmir Series of Texts and Studies note "mantrair ity arthah" (Karmakanda-kramavali by Somashambhu, ed. J.D. ZADOO, Srinagar 1947, KSTS 73) and it seems that nothing else can be meant here; this sense is however not recorded in the dictionaries.

for the treatment of the *paācasrotas* in the *Vārttika*. The *Svacchandatantra* derives it as follows: according to 11.33–36 the transcendent Śiva is completely pure and omnipresent like space. Beneath this formless and all-pervading siva are other deities with a limited 'pervasion', which means that they are situated lower in the hierarchy of the *tattvas*. They pervade all levels below them, but are pervaded by Śiva. These 'causal deities' (*kāraṇadevatā*) are then described:

"But now I will summarily teach how far the 'cause' [deities] pervade [the universe]. 47 Brahmā is presiding over the element earth, Viṣṇu over the element water, Rudra over fire, Īśvara over air and Sadāśiva over space. 48

Kṣemarāja adds that a similar identification can be made with the five *kalās*⁴⁹ and the text supplies a further set of identifications that are not relevant here. Then, in verses 40cd–41, the five *kāraņeśvara*s are correlated to the five *brahmans*, and in vs. 42 the four horizontal faces (i.e. except the Īsānā face which is directed upwards) with the four Vedas, so that the following picture emerges:

direction	brahma/face	karana	scripture
west	Sadyojāta	Brahmā	Rgveda
north	Vāmadeva	Visnu	Yajurveda
south	Aghora	Rudra	Sāmaveda
east	Tatpurusa	Īśvara	Atharva
zenith	Īśāna	Sadāśiva	'sarvavidyātmaka'

This is followed by another set of identifications with the same names for the faces:

Sadyojāta laukikaṃ vijñānam Vāmadeva adiyākam Aghora adiyākmikam Tatpuruṣa atimārgākhyam Īṣāna mantrākhyam

We will see that the mantramarga ('mantrakhya') is again divided into five parts, but the text gives no clue as to how we are to understand the relationship between these sets of five faces. Are they to be identified, so that, for instance, the same Sadyojāta is the source for the Rgveda and for 'worldly knowledge'? In some sense this may be correct, because the fivefold structure remains the basis of diversity and further multiplication would surely be seen as an internal differentiation, but on the other hand one has to conclude that the two sets of five faces form a hierarchy; the Isana in our first list was described as 'consisting of all knowledge' (sarvavidyātmaka), 50 which can only be explained as a summary of the next set. In the case of the next Isana, who is said to be the source of the mantramārga (mantrākhya), the same principle must be applied, for the mantramarga falls into five groups that are again associated to Sadvojāta etc. As far as I could see, none of the sources preceding Abhinavagupta specify how many sets of five faces are to be assumed for the explanation of scripture, and our author uses the doctrine of a further subdivision of the five more to hint at an infinite variety of scriptures, rather than to formulate a doctrine of more than five 'streams'. But some later sources proceeded further in this direction by determining the number of 'streams' as twenty-five, i.e. five five-fold faces.

The issue of a hierarchy of faces is further complicated by iconographical considerations. Sadāśiva is depicted as five-headed in sculpture and painting, but the fifth face, Īśāna, often remains invisible, ⁵¹ which means that the higher and more pervasive may be indicated by a lack of form. There may not be a hard and fast rule for sculptors in this matter, but this suggests that the doctrinal background of a specific number of heads may be difficult to determine. If we were to construct an image that would arrange the hierarchy of faces and corresponding doctrines in the *Svacchanda* passage quoted above, we would not be able to take the change of perspectives into account: viewed from below the first Īśāna would be a single head as the source of 'all knowledge' (*sarvavidātmaka*); from above the same Īśāna would not be *one* face, but five. The resulting image with two tiers of faces would ideally have ten faces, but in fact only nine could be

⁴⁷ In his commentary Kṣemarāja adds a note that here only the lower form of these 'cuses' as being five is described and that another list earlier in the text which had started with anāśritaśīva – and has therefore six instead of five – is therefore not contradicted. Statements like these can be understood as attempts to resolve inconsistencies which in reality are caused by careless, or hesitant redaction of the text and one might hope to unravel the redactional history of these texts by analysing these statements; cf. ARRAJ (1988). But the assumption of a coherent archetype may be futile; a specific Tantra may have always existed as a compilation of authoritative, but possibly conflicting accounts of Śaiva theory and practices.

⁴⁸ kāranānām punar vyāptim kathayāmi samāsatah | tattve tu pārthive brahmā adhiṣṭhādi vyavasthitah || aptattve tu sthito viṣṇū rudras tejasi saṃsthitah || īśvaro vāyutattve tu ākāle tu sadāśīvah || . Svacchandatantra 11.37–38.

⁴⁹ See tables below.

⁵⁰ This correlation follows naturally from the (Vedic) brahmamantra of Iśāna, which starts: "Iśānaḥ sarvavidyānām" Cf. also Śrikanthī 104c.

⁵¹ See KREISEL (1986) (p. 64, fn. 204) and SHARMA (1976).

depicted, since the lower Isana would lose its identity as one head. 52 This speculation shows that unless one were to produce a holographic image of Sadāsīva where the Isana could be one or five according to perspective, there might be an insuperable incongruence between the concept of different sets of five faces and the sculptor's practice, and our attempts to correlate specific doctrines with specific images may be fundamentally flawed. 53

Before discussing the accounts of the creation of the Śaivatantras we shall summarize the various correlations of the five faces with other hierarchies in Abhinavagupta's Trika. In the fifteenth chapter of the *Tantrāloka* he explains how the six directions in space evolve out of the uniform reality Śiva, who is conceived of as the light of consciousness (*prakāśa*):

As Lord Sadāsiva has the five mantras as his body, the points of compass evolve from the division into Īsāna, Tatpuruṣa (nṛ), Aghora, Vāmadeva, Sadyojāta and the lower face. Īsāna is above, as he consists of light. The eastern face is Tatpuruṣa [as it is] spreading out. Aghora (acanḍaḥ) is the southern [direction]. Vāma is pleasant (saumyakaḥ) [and] the northern; Sadyojāta is taught as the western as he is turned away. The face [tumed] to the subterranean paradise is the lower as it exists without light. 54

The faces are here naturally arranged in space by their relative position to the light of the sun and this description may seem commonplace, but – as will become clear in the Värttika – is in fact an elegant attempt to subject the five, or six faces to another element, namely "light".

The following table summarizes the correspondences of the five faces with other hierarchies: 55

vaktra kalā bhūta	isāna šāntyātītā ākāša	tatpuruşa śānti väyu	aghora vidyā tejas	vāmadeva pratisthā	sadyojáta nivrttíh
kāraņa	sadāsiva	īśvara	rudra	vișņu vișņu	pṛthivī brahman
śakti kṛtya	jñāna anugraha	cid tirobhāva	kriyā saṃhāra	ānanda sthiti	icchă srsti

Many other correspondences between the five brahmans or faces of Siva could be added, with the castes, 56 the parts of mantras like om and namah fiväya 57 etc., but having shown through the preceding examples their importance for structuring important coordinates of the Saiva universe, we may now turn to the hierarchy of Saiva revelation that is connected to the five faces.

1.3 The Structure of the Saiva Canon

A rather late but convenient summary of Siddhānta doctrine, the Śataratna-samgraha, gives an account of the origination of the Tantras:

"At the time of creation Siva creates pure knowledge characterized by five streams in order to make known the goals of man." 58

The commentary says that the five streams are the upper, the eastern, the southern, the northern and the western, and that knowledge is thus divided by this five-fold form of Sadāšiva, i.e. his five faces. Following the twofold division of knowledge, the higher one in the form of "understanding" or "realization", and the lower one in the form of "doctrine", the commentary says that in the first step 'sound' ($n\bar{a}da$) is produced from the formless Siva and then the Tantras from Sadāšiva whose form is that with five faces. But in fact there are twenty-five streams, if we include the lower faces of Sadāšiva, for we have to imagine a deity with five five-fold faces. Here the lower set of five faces are the source of worldly doctrine (laukika), the Vedas, adhyātmika, the Atimārga and

⁵² If we include the differentiation of the mantramärga we would theoretically arrive at three tiers with five each, i.e. fifteen, but only thirteen could be depicted in a three-dimensional medium.

⁵³ Still, the Saiva doctrine of twenty-five streams of knowledge will explain a twenty-five headed Siva better than the reference to the twenty-five tattvas of the Sainkhya system (Karasas, 1996), p. 64, fp. 2041.

⁵⁴ krumát sudošívádníkoh pokomantratanur yatah | [lanraghoravámákhyasadyodhobhedan disoh | što úrdhvom prakášatvát, pürvam vaktram prasári yat || puruso, daksindanda váma vámas tu saumyakah | paráhmukhatayá sadyah pasícimá paribhátyate || pálilvaktram adharam aprakásatayá sthíteh |, TÄ 15.203cd-206ab.

⁵⁵ See also BRUNNER-LACHAUX (1963), Appendix VI, where more identifications are given for the correspondence with the elements, see TA 15.207 and 11.20, Swarchandenama 11.3760–38; with the policokriyos, see Mrgendratantra, vidyāpāda, 1.3.8cd–9ab.

⁵⁶ Siddhäntasikhopanişat, in: Unpublished Upanişads, ed. Kunhan Raja, Adyar 1933, p. 380ff.

⁵⁷ ibid., p. 381. Also in: Šivatattva Ratnākara of Basavarāja of Keļadi, Vol. 1, Mysore: Oriental Research Institute 1964, p. 47f. (sadyojāto nakāras ca vāmadevo makārakaḥ | sādāro 'ghorasanyuāto vakārah paraṣas tathā | sadāsīvo yakāras ca pañcavaktrum prakīrtitam | tiānaḥ puruṣas caiva aghoro vāmadevakaḥ | sadyojātas ca pañcaiva kalā brahma prakīrtitāh |).

⁵⁸ stytikāle mahelānah purusārthaprasiddhaye | vidhatte vimalam jitānam paikcasnoto bhilaksitam |. Quoting Mrgendratantra, vidyāpāda, 1.1.23.

the Mantramarga. 59 These streams therefore encompass all forms of knowledge. 60

Being the source of Tantric Śaivism (mantramārga), the upper, fifth face is of course of primary interest and therefore often the only one mentioned. The five faces of this upper face are arranged in the same way according the points of the compass plus one directed upwards. With their respective names, the correlating scriptures and their characteristics they are the following: ⁶¹

direction zenith east north west south	īśāna	gāruḍa	description of the tantra granting liberation destroying all kinds of poison acquiring magical control over everything warding of spirits and planetary influences destroying enemies
-------------------------------------------------------	-------	--------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

As the worshipper is facing east, the northern face is called *vāma* in the sense of "left", the Aghora-face is on the "right" side. "*dakṣiṇa-tantra*" is therefore synonyous with *bhairavatantra*. ⁶² We shall not deal here with the names of the Tantras involved, as they play no role in the *Vārttika*. ⁶³

From the above account we can see that whereas the four lower faces are the source of scriptures that are devoted to temporary results with which a liberation-seeker could not wholly identify, the upper face is reserved for the scriptures of the Siddhānta. The monists contested the view that the dualist's interpretation of these scriptures was correct, but could only do so with the help of "higher" Tantras that provided them with the necessary exegetical

repertoire. Their problem was that these "higher" scriptures were associated with the faces of Vāma(deva) and Aghora. Thus an important line of argumentation in the Vārtika serves to explain why the Siddhānta that came out of the upper face is not the highest doctrine.

There are many later accounts of the same process, for instance in the first chapter of the Kāmikāgama, but it may be enough to quote a passage from the Sivatattvaratnākara, a voluminous encyclopedia that has a slightly naive, but rare characterization of the two less important 'streams', namely the eastern and the western. 64

"Below [the Isana face] are four streams. Through them were created Tantras; [these are] taken seperately the Garuda-, the Daksina-, Vama- and Bhūtatantras.

Of these it is said that in the Gärudatantra one should perform worship of the mantra of Tatpuruṣa and meditate on it in a particular way [?]. ⁶⁵ This Tantra teaches particularly and clearly Mantras and herbs for the cure of poisons, like that of snakes etc.

In the Dakṣiṇatantra one should meditate on and perform worship of the mantra of Aghora and it is taught that it alone is to be realized. Mantras and their applications are taught there which bring victory over enemies. In the Bhūtatantra the might of [the mantra of] Sadyojāta is told as well as mantras and herbs for the pacification of ghosts, spirits, goblins an the like. 66

1.4 Models of Integration

What must have concerned the theologians that advocated the worship of more heterodox pantheons was the fact that the pan-Saiva model of revelation with its five streams favoured the Siddhānta. In order to achieve an integration of other

⁵⁹ The interpretation of these terms is disputed; see TAV 13.346cd for a forced reinterpretation. For the idea that, for instance, even an Upanişat is taught by Siva, see PTV, p.713 yathokam ... [quoting Kathopaniṣat] iti vedānte paramefvareņa.

1 The Saiva Revelation

scriptures the doctrine that Sadāśiva's body consists of five mantras 67 and than these mantras are faces which are the source of the five streams of knowledge. was extended in two ways.

1.4.1 The Lower face

As shown above the creation of the directions in space is explained with the arrangement of the faces of Siva, and this, by analogy, demands a sixth face that is directed downwards. The lower face is called pātālavaktra (TĀ 15.206a), picuvaktra or yoginīvaktra and is the source of the Kaula doctrine. 69 In the logic of Abhinavagupta's system the position of this face as outside the normal pentad explains why it transcends the dichotomy of the other faces and is therefore the source of non-dual scriptures:

"This lower face completely destroys all stains of duality; for when it is worshipped, the multitude of upper and lower [levels] vanishes."70

Javaratha adds that this face is the sixth stream (srotas) of revelation, the source of the secret scriptures that teach non-duality. 71

We know from a quotation from the lost $Tri\acute{s}irobhairavatantra$ in the TÅ that this Trika-Tantra knew six streams:

"Of the Saiva scripture that has three objects, a twenty-five-fold nature, or a division of ten and eighteen [scriptures], or six streams, it is said here: Here several classifications of the Saiva revelation are given. Since the passage that follows is quoted from a Trika-tantra, it is not surprising to find that the three categories of the Trika, namely nara, śakti and śiva, are mentioned first. 73 The third refers to the division of the Siddhanta-tantras into two divisions (bheda), the ten Śivatantras (=śivabheda) and eighteen Rudratantras (=rudrabheda); the last item mentioned, i.e. the division into six streams is interpreted by Jayaratha as the five known to the Siddhanta plus the lower Picuvaktra, 74

Another acclaimed source that teaches the lower face is the Śrīkanthī which is discussed in the appendix.

1.4.2 Beyond the Higher

In the Vārttika Abhinavagupta does not mention the Picuvaktra; here the source for the higher revelation lies above the upper face (Īśāna) and is simply called ūrdhvordhva, the one "higher than the upper". This face, which is associated with the female power (śakti) of Śiva, is the source of higher scriptures and corresponds to the higher levels inside the Trika, namely the Kula, Kaula and Mata. 75 What is astonishing is that Abhinava does not mention one important source for this idea: the Javadrathavāmala. There we find, in the section analysed by DYCZKOWSKI, a system of six streams which adds a higher stream to the normal five. 76

1.4.3 Amrtesa

There is a further scriptural source that could have been adduced by Abhinava for an integration of conflicting pantheons: the Netratantra. It contains passages which could be interpreted in a similar way as the Mālinītantra's transcendence of all rules,77 and there are also good arguments for a nondualist. 78 In chapters 9-12 there is a description of a series of pantheons,

^{67 &}quot;pañcamantratanuh" appears in TĀ 15.203d and Tattvaprakāśa 6.

⁶⁸ pañcasrotomukhah, see Ratnatravapariksā 280c.

⁶⁹ See DYCZKOWSKI (1988), p. 63ff. One important source that mentions a sixth, lower

Surely the text means that Śaiva scripture, i.e. śaivam in the sense of śaiva uddyam, is thus divided. Compare the quotation "vedåc chaivam ..." in TAV 1.18 ad SANDERSON (1997); also Jayadrathaydmala as quoted in DYCZKOWSKI (1988), p. 20

⁷³ For the following, see Jayaratha's commentary on the passage: triprameyasyeti naraśaktiśivātmakatvāt | pañcapañcātmakasveti tantraprakriyayā vaktratayā, viśesaprakriyayā vāmešyādītayā ca evamrūpasvetv arthah | satsrotasa iti picuvaktrena saha |

⁷⁴ The interpretation of paricaparica is problematic. Jayaratha understands it as the five faces plus the five vāhas of the Krama; could it instead be an early reference to five five-fold faces?

⁷⁵ See SANDERSON (1997) for these terms.

⁷⁶ DYCZKOWSKI (1988), p. 124.

⁷⁸ See 21.20-32ab: 8 39-40

1 The Saiva Revelation

through which the main deity of this system can be worshipped:79 the ninth through which the request by the goddess that Siva may specify one point chapter starts with the worship of forms of the deity taught in taught before, namely how it is that the worship of forms of the deity taught in all the scriptures – the Vāma, Dakṣiṇa and Siddhānta, but also Saura, Vaiṣṇava and Vaidika – can be chosen at will and lead to the desired fruit. The answer is of course that the deity of the Tantra, Amrtesabhairava, is all-pervading consists of all the Agamas and therefore bestows the fruit of all mantras, He is multiform (9.14), like a wish-fulfilling gem: if worshipped as Sadāšiva, he takes on the form of Sadāsiva to bestow the fruit of the worship onto the worshipper (9.16cd-17ab), etc. This inclusivism is then specified through a description of some of these pantheons: in chapter 9 a description of Sadāsiva is given, chapter 10 is a description of Bhairava as worshipped according to the scriptures of the southern stream.

Tumburu's pantheon, 80 which is described in chapter 11, is noteworthy. first because there are not many sources for the Vāmasrotas and, furthermore because it supplies some parallels to the Vārttika. Kṣemarāja's verse that introduces this chapter uses the key words saubhāgya and vamana that will mark the description of Vāmadeva in the Vārttika. Verse 1 of chapter II mentions that his mantra grants all "the fruit of all siddhis", an expression which occurs also in 185b. It then goes on to describe the installation of the ten-armed, five faced and three-eyed Tumburu in an eight-petaled lotus, whose five faces should be designed according to the method followed for constructing the form of Sadāśiva, and who is surrounded by his four powers Jayā, Vijayā, Jayantī/Ajitā and Aparājitā.

The background for Abhinava's treatment of the left stream in the Vārtika⁸¹ is the observation that this stream is concerned with magical power (siddhi) and especially with rites for sexual attraction. Interestingly this connection between Tumburu and "desire" emerges from a passage in the Yogavāsistha. This Kashmirian narrative provides external evidence not only for the connection of Tumburu with the left current, but also for his association with the deity of the right current, which is one of the features of the Trika's theory of the

The series of pantheons in the Netratantra continues in chapter 12 with the Kaula pantheon formed by the eight mothers. Kşemarāja's introduction reproduces the doctrine that the Kula is the undivided essence of the preceding systems, i.e. Siddhānta, Daksina and Vāma, but the Tantra itself does not confirm the position of the Kaula, as its inclusivism extends, in chapter 13, to a description of Nārāyaṇa and Sūrya. 83 This explains why the Netratantra, despite all parallels, is ignored by Abhinavagupta in the context of the description of the canon: this Tantra is aware of the Vama, Daksina, Trika (13.37-43) and Kaula. but includes them merely as possible forms of the worship of Netranatha. In other words, it is for Abhinanvagupta too near to the truth of the Trika, but too far from his sectarian position.

1.5 Abhinavagupta's Definition of Āgama

In the last chapters of his Tantrāloka, Abhinavagupta expounds aspects of his philosophy of Śaiva revelation. Āhnika 35 deals with the "unity of all Śāstras" (vs. 1) as taught by his teacher Sambhunātha (vs. 44). The author starts by defining āgama as the basic knowledge (prasiddhi) on which every long established activity (vyavahāra) depends, 84 and which is a perception that expresses itself into sound, or words (19a). Without such prior knowledge even direct perception would be inconsequential, like that of a hungry child that - without instruction - would not be able to select eatables. So it is that without being aware of it everyone depends on the primary agama that has its source in Siva. In a parallel in the Tantrasāra85 he adds that, fundamentally, the Śāstras were not divided according to the variety of desired results and the diversity of qualifications (adhikāra), but through Siva's power of limitation people became devoted only to parts of this Ur-Agama: some to the Veda, where duality predominates; some to the Sāmkhya or to the Vaisnava scriptures in their fruitless search for liberation; some who hold that the nature of Siva is separate from the world to the Śaiva-Siddhānta; some who teach the highest deity as omniform to the Matangatantra; and very few to the Trika. In this way Siva leads every soul gradually to the "one fruit", i.e. true liberation, which is that of the Trika.

⁸⁰ See GOUDRIAAN (1985), p. 19–62 for a collection of material on and detailed analysis of

⁸¹ SANDERSON (1986), p. 188 (fn. 90) and p. 212-214.

⁸² Or, to be exact, the Moksopäya, see HANNEDER (1998).

⁸³ DYCZKOWSKI (1988), p. 43, quotes this Tantra for a division into three streams, but this is Ksemarāja's interpretation.

⁸⁴ The key term prasiddhi, which is, in the same context, used in its primary sense ("renown") by Jayanta Bhatta (mahājanasamūhe ye prasiddhim prāpur āgamāh, Nyāyamañjarī, p. 648), is here reinterpreted. The Nyāyakośa gives jñānam and khyātih as synonyms; GNO-

⁸⁵ See chapter 21, p. 193-4.

By way of fragmentation this *prasiddhi* spreads either as an unbroken chain of teacher and disciple (*paramparā*), or as scripture (TĀ 35.15). ⁸⁶ Although there is only one Āgama, it becomes manifold through its division into different goals, like the four aims of man, but this does not imply internal contradiction (25) and does not falsify its validity. There is, however, a clear hierarchy of these parts so that the higher fruit cannot be attained through the lower doctrines and practices; the adherents, for instance, of the Pañcarātra can only experience what they think to be liberation, whereas true liberation through identity with Siva is beyond them (29). Thus the whole range of knowledge, starting from worldly knowledge, and including all forms of religion, culminates in the Trika, but the unity of all knowledge can be seen only on the Kula level of the Trika, since the Kula is the essence of all Śāstras (30–34).

Having propounded the descent and abridgment of the original Śāstra in āhnika 36, he draws the conclusion that the lower doctrines, like that of the Veda, are dominated by delusion in order to preserve the world:

"Since [the lower systems] have perceived a part of the reality of the higher doctrine, but rejected it, we see the nature of delusion in these lower systems, because it protects creation. For instance in the holy Ānandaśāstraitis taught by Śiva that the word of the Rsis [is the cause of] much trouble, produces uncertain and minor result [and is therefore] limited; the wise should not take it as an authority, but resort only to the scripture of Śiva." 87

But this is not all; for the same reason, i.e. because the Veda is in the domain of delusion, all that goes against it will lead one beyond delusion: "Those very acts that are the cause of sin in the Veda produce rapid result in this doctrine of the left..." *** According to SANDERSON vāmaśāsane* here means the doctrine of the Vāma-srotas, as the Ānandatantra* which is quoted here, belongs to that part of the canon, *** and it seems that Abhinavagupta wishes to extend this to

the whole Śaiva revelation by following the more general definition of $v\bar{a}ma$ as $sams\bar{a}ravipar\bar{u}ah$. 90

The author continues by dividing the doctrine taught by Siva into two branches, one transmitted by Śrīkantha (Tantric Śaivism), the other by Lakuleśvara (Pāśupata-Śaivism) (14). Whereas both grant liberation, only the former has also the capability to grant "enjoyment". The doctrine of Śrīkantha is fivefold, because of the five powers of Siva, and is called the "fivefold stream" (16). It falls into three parts, a group of ten and one of eighteen scriptures, and above it are the sixty-four Tantras of the "Bhairava division". In verses 18-24 the system of Pīthas is introduced. According to this classification the Mālinīvijayottara is the "supreme essence of the Siddhayogīśvarīmatam". which is the main scripture of the highest Pītha, the Vidyā-Pītha. As further support for the supremacy of the Mālinītantra he quotes a few verses that introduce another model of explanation which will be used in the Vārttika, namely that the essence of all Tantras fused with the left and the right stream is to be found in the Kaula level of the Trika. For that reason the Trika is called "half of six" (sadardha), because its constituent parts are the following three: the sixth stream above Īśāna, i.e. the ūrdhvordhva, the left and the right. 91

It was difficult for the Śaiva Tantrics to be too selective in their choice of individual Tantras as valid, since divine authorship could hardly be rejected in some cases and accepted in others without weakening one's position. One criterion for the validity of the "Āgamas" as a group was their freedom from contradiction (<code>ekavākyatā</code>), because otherwise divine authorship would be difficult to uphold. It was therefore crucial that the theoreticians produced an account of the Śaiva canon that would declare all parts as valid, but hierarchize them in a way which would support the claim of one's own group for the highest level. On the level of the scriptures themselves this was done by inserting lists of Tantras in the chapters that deal with the "descent" of the scripture (<code>tantrāvatāra</code>). ⁹² On the level of exegesis it had to be shown that the hierarchy of possibly conflicting Śāstras was logical and intended by Śiva. The Saiddhāntikas had no difficulties in showing that their scriptures — which were associated with the highest face of Śiva — were superior, ⁹³ but the monists who based their philosophy not on the Siddhāntatantras had to find a model to explain why their own Śāstras repre-

⁸⁶ This may seem contradictory, as even "scriptural traditions" in India are transmitted often orally, but the verse is an attempt to show that both worldly knowledge, i.e. knowledge not transmitted in a text, as well as the knowledge that is crystallized in a scripture are derived from this primary revelation.

trom this primary revelation.

1 The Saiva Revelation

sented truth more fully. The first section of Abhinavagupta's Vārttika describes. such a model

1.6 The Threefold Division

In verses 374-391 of the Vārttika Abhinavagupta describes a division of the Saiva canon into three parts: the sivabheda with ten Tantras, the rudrabheda with eighteen Tantras and the bhairavabheda with sixty-four Tantras. The first two add up to the twenty-eight Agamas of the Siddhanta94 that are known from other sources. Abhinavagupta does not dispute the authority of these scriptures, but says that their main aim is to promulgate dualism and dualism-cum-nondualism respectively, whereas the Bhairavatantras teach only nondualism and are therefore a higher form of revelation.

This classificatory system, which is probably extracted from the lists in the Srikanthisamhita, 35 is a rearrangement of the pañcasrotas that gives more weight to non-Saiddhäntika scriptures: the first two categories, the sivaand the radrabheda are the Tantras that in the pañcasrotas come out of the idea-face, whereas the bhairavabheda fuses the Vāma and the Daksina, 96

The conflation of this comparatively early classificatory system with other systems that belong to later literature, or to the literature of radically different schools, has complicated the issue. Firstly, the sixty-four Bhairavatantras are not simply taught by the Aghora-face as are the daksinatantras; 97 if this were stated in a text, it would have to be interpreted as an attempt to reduce the status of non-dualistic scriptures to that of mere Daksinatantras; it would in other words deny their claim to supremacy.

It is important to note that none of these systems is neutral enough to be a candidate for a scientific description of Tantric literature. Since the structure of the canon is one of the vital parts of the self-description of a school, we cannot deal with any of these classificatory systems without assuming a hidden agenda.

The system described by FILLIOZAT as given in the Ajitāgama, in which the Saldbiantatantras are divided among all five faces, is anomalous and can he ignored here. 98 The confusion caused by such comparisons stems from the now obsolete assumption that the Tantras transmitted in South-India under the names of the twenty-eight are those very works to which the early exegetes refer 99 In fact, "of the twenty-eight tantras that are listed as scriptures of the Saiva Siddhanta very few are demonstrably early works. Most are South Indian redactions or entirely fresh compositions that were unknown to Rāmakantha."100 As none of the surviving early Tantras are from the Sivabheda, and only very few references to this part of the canon are known in early literature, 101 we cannot say that the siva- and rudrabheda are more real than the bhairayabheda 102

For the Kashmirian non-dualists of Abhinavagupta's school the scriptural authority on the details of the division of the pañcasrotas was the Śrikanthi. Fortunately this part of the text has been discovered by Prof. SANDERSON 103 in Taksakavarta's Nityādisamgraha, a Kashmirian ritual manual. The reader will see in the transcript that is given in the appendix that the Śrīkanthī provides us with a multitude of classifications among which we find the group of sixty-four Tantras. Its main classification of the canon is however not Abhinavagupta's 315-317). 104

^{56:} See GOODALL (1995), Appendix I, p. 228, for lists of Siddhintatantras compiled from early

But it should be noted that the Srikouphi calls the sixty-four Tantras the südülivan cakran.

Pace DVIVEDA: catalogustir advayapradhānā bhairavabhedās ca daksinavaktranihatāk.

^{99 &}quot;Among the numerous branches of the saiva tantric literature, Saiva-Siddhānta is one of the most accessible to us, as much of its ancient literature has survived to the present day. It is defined as a school of Saivism based on 28 agamas or tantras, a series beginning with Kāmika and ending with Vātula. It is thus differentiated from the other daksina school of Saivism associated mostly with Kaśmīr which is told to be based on a series of 64 agamas. The high number of texts in the latter series may be theoretical, and is not confirmed by the available documentation. But we can say that the number of 28 of the Siddhantins is a reality, as they are represented in manuscripts found mostly in South India."Sväyambhuvasütrasamgraha, introduction, p. xxiv. 1.7 Tantrālokaviveka 1.18

In his TA Abbinavagueta summarizes the threefold division only in one very in the beginning of the work and fortunately the commentator Jayaratha feels prompted to provide the reader with the details of this doctrine. Since the description of this division in the Vārttika would be virtually uninterpretable wis. out this passage, it is translated here in full: 105

The essence of the teaching of the pervading Lord, which is divided into ten, eighteen and sixty-four, is the Trikaslästra, and the essence of that is the Milinimata. [=TĀ 1.18]

[Viveka:] In our system, all scripture unfolds (ujjymbh) as supreme knowl. edge on the highest level of speech, which consists of a knowledge that is essentially the supreme form of articulation, as it is replete with all

On the visionary plane [of language] the articulation "I" (aham) appears inwardly; this articulation is unique, because in its nature denoter and denoted are yet undivided. Therefore the object of expression articulated by the perceiver appears here only inside ("veiled by") the nature of aham h Thereafter, on the intermediate plane [of language], the same scripture shines only inwardly as [differentiated into] the natures of denoter and denoted, because of the appearance of a multitude of subjects and objects of experience. For on this level, Siva himself brings down the whole Sastra in five streams [which he effects] through resting on the state of Lord Sadaliva by making manifest his five powers 'consciousness'. "bliss', 'volition', 'cognition' and 'action' [as Sadāsīva's body], and by combining his five faces. [The resulting group of scriptures] is manifold through divisions and subdivisions, because it is characterized by duality. duality-cum-non-duality and non-duality. 108

[How] it becomes manifest on the mundane level [of language] can be explained as follows: at first three scriptures appear when each of (the face)

105 The passage has been analysed in GNOLI (1972), p. 70, fn. 17.

 $\tilde{I}(\tilde{a}na~(\tilde{I}), Tatpurusa~(T)$ and Sadyojāta (S) are about to appear, and [another threel when they have appeared (No. 1-6). There are therefore six scriptures from single faces. There is one scripture when all three appear together (No. 7). When these three form groups of two, i.e. Isa-Tatourusa. I/(a-Sadvojāta and Sadvojāta-Tatpurusa, three scriptures appear (No. 8-10). These are the ten scriptures of Siva in which duality is predominant. This has been taught [in the following verse]:

[quotation of MVV 374-375ab].

The eighteen divisions of Rudra appear through blending these [three faces] with Värnadeva (V) and Aghora (A). That means that, in this Idivision L two scriptures are formed through Vāmadeva (No. 1) and Aghora (No. 2) alone. The reason [for taking only these two] is that although there are five faces, three faces, namely Isa, [Tatpurusa] and [Sadyojāta] have been taught [to form) the division of Siva, and a repetition of things taught before is not appropriate. [...] 109 As Tatpurusa and Sadyojāta lack own nature, they do not combine and four [theoretically possible] combinations 110 are absent. So only three texts formed of two faces remain: Isana and Vamadeva (No. 3). Isana and Aghora (No. 4), and Aghora and Vamadeva (No. 5); these are the three texts formed by two faces.

And by combining the five faces, namely Isana, Tatpurusa, Sadvoiata, Vămadeva and Aghora into groups of three, first by combining Îśāna with [two] other faces one by one, six combinations result. Adding three for Tatpurusa, and one for the combination of Sadyojāta with the remaining faces, we arrive at ten; but the first combination of three, i.e. Ka, Tatpurusa and Sadyojāta, has been mentioned in the division of Śiva, and the last combination of three, consisting of Isa, Vāma and Aghora will be used for a different purpose. Thus eight combinations of three remain and the result is eight scriptures from three faces (ÎTV (6), ÎTA (7), ÎSV (8), ÎSA (9), TSV (10), TSA (11), TVA (12), SVA (13)L

[...] There are also five ways to combine the five faces in groups of four, but according to the rule mentioned above that there is no connection of Tatpurusa, Sadyojāta, Vāmadeva and Aghora, only four combinations of four remain [ÎTSV (14), ÎTSA (15), ÎTVA (16), ÎSVA (17)]. By combining all faces there is one fivefold combination (No. 18). These are the eighteen

¹⁰⁶ The evolution of the Saiva canon is here explained as a process of articulation of knowledge. edge. Its stages are the four phases of speech, namely "supreme" (part sik), "visional)

In the visionary plane the letters of the Sanskeit alphabet appear in an undifferentiated from as a lines. This "engianation" of the first person protoons suggests that the subject of pe-

The interesting point here is that the five or six streams (anotar) are still above summaawage and that the categories to which actual sexts can be attributed are the three distant

¹⁰⁹ The next sentence seems corrupt.

¹¹⁰ Sadyojika/Vintadeva, Sadyojika/Aghora, Tatpurusa/Vimadeva, Tatpurusa/Aghora,

scriptures of Rudra which have duality and unity as their main [doctrine]. This has been taught [as follows]:

When the three faces [mentioned earlier] combine with the left and right face, then seven divisions of two, and eight divisions of three are the result. There are four combinations of four and one combination of

But of these twenty combinations [four have to be omitted] as Tatpurusa and Sadvojāta do not combine with Vāmadeva and Aghora, because the eastern and western face can never acquire knowledge independently thus sixteen remain.

But there is the nature of Vāmadeva and, even higher, that of Bhairayn Therefore [with these two added] there is an eighteenfold division of Rudra which has been taught by Siva in the Sastras, 111

And the same has been stated in the holy Srīkanthī in detail after giving the names of the [scriptures] (abhidhānapūrvam): 112

Iquotation of Śrīkanthī 108-112]

In this context the same [author, i.e. Abhinavagupta] teaches;

It has been taught that the division called Siva [receives its name from the fact that] it is taught by Sivas [i.e. different manifestations of Siva]. the division called Rudra [as it is] taught by Rudras. 113

Eight multiplied with the [number of] vasus, i.e. eight, are sixty-four, the division of Bhairava. To explain: in the southern face, which is free from duality and which [is of fourfold nature:] essence (svarūpa), Šiva, Šakti, and the yoginivaktra which is called "their union", 114 there is [in each of them] a fourfold form, i.e. being about to arise, arisen, about to disappear and disappeared. When this sixteenfold form [of Aghora] suddenly merges with all the other four faces, then their mutual combination results in the sixty-four divisions of Bhairava, in which non-duality is the main [doctrine]. This is

Iguotation of MVV 383-384 and 388cd-3901

The same has been stated in the Śrīkanthī in detail after giving the names

"Divided" (bhinnam)115 through these [divisions] implies that it is manifold through its divisions and subdivisions. This variety through other divisions and subdivisions has been taught in the Śrīkanthī with regard to the Tatpurusa-face [quotation of 151cd], also [with regard to the southern face] [quotation of 220ab] and the [Vamadeva-face] [the quotation that follows cannot be traced in the Śrīkanthī, but cf. vs. 269.]; this (tad) [variety] consists [also] of subdivisions that are caused by the fact that each of these faces (tata eva), but not dealt with it separately here. The same has been stated

And therefore it is an established doctrine that this Sastra was created in three parts, which are called Siva, Rudra and Bhairava and teach [respectively] duality, duality-cum-non-duality and non-duality. This has been

And thus the Lord 116 immerses this Sastra, consisting also of duality etc., in the nectar of supreme non-duality by embracing the sixth group of three, i.e.

¹¹¹ Of this quotation only the first line is identical with verse 376ab of the Vārttika. GNOLI GNOLI (1972), p. 70, fn. 17) assumes that this is taken from the lost Pürvapañjiki.

¹¹² This probably refers to the practice of the Śrikanthī to list the names of the texts and then to add subdivision and more detailed descriptions.

¹⁴ The reading accepted in the K_{st.} advayarvabhave svaripe, is redundant. Manuscript that more convincing, since it provides us with four items. It is rather odd to find the yoginfultrahere, as it is assaulty a name for the lower face. But here Jayaratha faces a dilemma On the one hand he wants to provide the reader with the names of the Tantras by quoting the followed, but he also wishes to interpret the passage in line with the Varnika. Now these two sources differ in one important point; the Srikanthi attaches much weight to the lower

face, the Vārttika does not mention it, and - more importantly - has no place in its system for it, since the sixth stream is already reserved for the undhwordhwa. I think that Jayaratha's way out of this impasse is to subsume the voginivaktra under the Aghora-face.

¹¹⁵ This refers to TA 1.18.

¹¹⁶ As this is intended as a summary of 395-396. I would propose to read parameterable here.

Isāna, Vāma, Dakṣiṇa, as places of rest for the three powers Parā, [Parāparā] and [Aparā] 117 according to the saying:

and [Apaid]
"Like the smell in the flower, the oil in the sesame seed, the living soul in the body and the taste in water, the Kula [doctrine] resides inside all Śāstras as their essence."118

Otherwise [without being bathed in supreme non-duality] the Śāstra will not become a means for attaining the supreme state. This has been taught [by Abhinavagupta]:

[quotation of 395cd-396 and 398]

[Opponent:] What is a valid source for this, as no such doctrine is found. [Answer:] 119 In this matter [Abhinavagupta] has taught that the lineage of teachers is the source for this:

[quotation of MVV 393cd-394ab]

[Opponent:] You are turning the objection, namely that this [doctrine] has sprung merely from human intellect [i.e. has no scriptural source], into its own answer. This is really an unprecedented feat of learning; therefore some scriptural source has to agree with it in order to answer this. [We answer:] No! For Agama itself is taught to be undisputed knowledge. J...]120

We need not quote the remainder of Jayaratha's commentary on this verse. For him the fact that great Gurus agree on this point is sufficient proof for the authenticity of this doctrine. The long discussion of objections that follows, and the rather strong tone of it, 121 might indicate that the arguments for this reinterpretation of the pañcasrotas, an interpretation whose hardly veiled purpose it is to contest the supremacy of the Siddhanta, were indeed without a clear scrip-

Jayaratha then concludes his commentary on TAV 1.18 with a discussion of the gradation of Saiva scripture. 122

Chapter 2 The Mālinīślokavārttika

The Mālinī[vijayottara]tantra is Abhinavagupta's main source for the Trika and four of his works deal with it: the lost Pūrvapañjikā, 1 the Mālinīvārttika, the Tantrāloka and the Tantrasāra. For Abhinavagupta this Tantra was the "supreme essence" of the Siddhayogeśvarīmata, which in turn is the main scripture of the Vidyāpītha division.2 The name of the Tantra reflects its claim that it is a shorter version³ of an earlier Mālinī, which in turn is a shorter version of the Siddhayogeśvarīmata. 4 The text is also called Mālinī or Śrīpūrva.5

If we look at Abhinavagupta's works that deal with this Tantra, we have one Paddhati of the Trika system as taught in the Mālinī (Tantrāloka), its summary (Tantrasāra), one work that was perhaps an extensive prose commentary (Pūrvapañiikā), and a Vārttika.

According to the popular definition we would expect a vārttika to examine what is taught, what is not taught or taught imperfectly in a work.⁶ If we look at the most famous Vārttikas on the traditional Indian syllabus, those by Kātyāyana and Kumārila, this definition seems justified; both include a critique or at least clarification of their sources, namely the Astādhyāyī and the Śabarabhāsya. This cannot be applied to an Agama, if one holds the view that it is in some sense the source of knowledge. The only method a

¹²⁰ I am grateful to Harunaga Isaacson for the interpretation of this paragraph.

¹²²¹ See for instance: yadi cărvăgdṛśāṃ bhavādṛśām evaṃvidhā śrutiḥ karṇagocaraṃ na gald

¹²² This is analysed in SANDERSON (1997).

¹ The name of this work, for which see GNOLI (1972), p. 887, is given as Pūrvapañcikā, which is an orthographic variant common in Kashmirian manuscripts (it is also used in an autograph of the Laghupañcikã on the Haravijaya by the famous scribe Ratnakantha, Bodleian Library, Ms. Stein Or. c. 11). The work is referred to and quoted in Parātrimśikāvivaraņa, p. 23f and p. 57. In TAV 23.75 two verses are quoted and it is referred to as a vivarana. The verses could be summary verses and the commentary itself a prose commentary like the PTV.

2 The Mālinīślokavārttika

commentator can adopt is to make explicit a hidden sense, which one could justify by the abbreviated form in which the Agama has come down or by the secrecy of the doctrine. Abhinavagupta commits himself to a very strict the secrecy of the desired that everything is told in the Mālinītantra explicitly or implicitly (lingatah). And he states in another passage that there cannot be any question of non-literal meaning (arthavāda) as regards the word of Siva.8 This, however, is a theological program; in concrete exegesis Abhinavagupta's system is well aware of non-ultimate statements in a valid scriptural text. The usual definition of a vārttika could therefore be justified: it would be a commentary that could find its way through conflicting statements about Saiva practice by rejecting some, namely provisional, rules like the injunction to perform a specific worship, and by providing the arguments that can establish a hierarchy of these conflicting injunctions. I think this approach can be discerned in the discussion of Mālinī 18.74-81 in the fourth chapter of the Tantrāloka (212-278)9 and the same principle applies to our text.

The text of the Vārttika falls into two disparate chapters, the first with 1135. the second with 335 verses which are mostly anustubh with only short passages or single verses in longer metres. There are not many quotations and astonishingly few from the MVT. The first question is therefore, on which parts or concepts of the Tantra the author is actually commenting upon.

One view to be found in the secondary literature is that of the Vārttika being a commentary only on the first verse of the MVT. It is based on the concluding verse by the author himself, in which he states that he has commented only on the first verse, and this impression is reinforced by the fact that the first verse of the Tantra is quoted in full in the beginning of the commentary. This has created some funny conceptions, as for instance in PANDEY's pioneering volume on Abhinavagupta, where he says of the Pūrvapañjikā:

"From its name, Pañcikā, which means a detailed exposition, and from the frequent references to it in most of Abhinava's writings it seems to have been a very big work. An idea of its size can be formed from the available part of the Mālinī Vijaya Vārtika which is an exposition of only the first verse of the Mālinī Vijaya Tantra, as he himself says in its concluding line.

pravarapuranāmadheye pure pūrve kāśmīriko 'bhinavaguptah Mālinyādimavākye vārtikam etad racayati sma.

What must have been the size of the detailed exposition of the whole of the above Tantra, it is not difficult to imagine. This work, however, seems to be irrecoverably lost. Its loss to śaiva philosophical literature is irreperable." 10

Although it does not become clear whether it is PANDEY's view that the Vārttika as it is is incomplete, it seems that he takes the statement about the Vārttika being a commentary on the first verse only as literally true.

We find another early statement on the Vārttika by MADHUSŪDAN KAUL, who writes in his introduction to the MVT: "The first verse of the Tantram he took up in his Mālinīvijayavārttika and explained it so thoroughly that connotations of several terms are made clearly intelligible. The points, that could not find room in the Varttika for want of space and owing to its limited scope as Vārttika, he discussed in the Tantrāloka."11

There is probably no word limit for a vārttika and the argument of space is therefore not to be taken seriously, but the impression that the connotations of the first verse of the Tantra are explained at great length is certainly correct. This first verse, which forms verse 14 of the Vārttika runs as follows:

The rays of the moon of knowledge which issue from the face of Parameśa [i.e. Siva] and are capable of destroying [everything] opposed to universal bliss surpass all. (14)

The light from the half-moon on Siva's head, which is identified with knowledge, is reflected in his face and sends out cooling rays. Although not easily understood from a north-European perspective, one standard comparison for saṃsāra is "heat", and the knowledge that destroys ignorance that is the cause for samsāra, is consequently associated with the coolness that is embodied in the moon. 12 But for Abhinavagupta this is not just an introductory poetic image in a mangala-verse. It implies the descent of this liberating knowledge from its source above Siva's head down to his five heads and, through this process of reflection, its differentiation into scriptural revelation. The explanation of this idea forms the first section of the Vārttika which is the topic of the present the-

^{*} TA 4 232: nārthavādādišarīkā ca vākye māhešvare bhavet. This is in contrast to Saiddhāntika exegesis: Sadyojyotis talks of anuvādasūtras and arthavādasūtras as being part of a Tantra. See Sadyojyotis on Svayambhuvasūtrasamgraha 1, p.4.

⁹ The TA is also called Varttika by Abhinavagupta himself in a cross-reference.

2 The Mālinīślokavārttika

A summary of the whole *Vārttika* is beyond the present work, but we shall now briefly discuss its structure. If we look at the concluding verses of the first chapter, we find an explicit statement to the effect that the first Kāṇḍa is a commentary on chapters 1–17 of the *Mālinītantra*. Obviously the reader has to be made aware of this fact, because there are hardly any indications for it in the text itself. We see on the other hand from the choice of words that, at the end of the first Kāṇḍa, Abhinava still has the first verse of the Tantra in mind. The second Kāṇḍa of the *Vārttika*, which has only 335 verses, starts unambiguously with a reference to the 18th chapter of the Tantra, thereby confirming that it deals with the remaining chapters of the root text. Again, the end of the second Kāṇḍa is reminiscent of the first verse of the *Mālinī* and the last verse of the *Vārttika* contains the statement quoted above that the author has only commented on the first statement of the Tantra.

From the fact that the first part, at least in some sense, deals with chapters 1-17 of the Tantra and the second part with the remaining chapters, we can conclude that the text of the *Vārttika* as we have it is a self-contained work, and this is recognized by the editor Madhusūdan Kaul in his introduction to the edition of the text. ¹³ Much less obvious is the reason for the division into two unequal chapters. The MVT is not divided into pādas but into 23 adhikāras; the 18th chapter is in a section on Yoga, which started with chapter 12, but its importance for Abhinavagupta lies in the fact that it is mainly there that he can find passage to sustain his monistic interpetation of this basically dualistic text and to postulate a hierarchy of levels inside monistic Śaivism. ¹⁴

Another important question is the relationship between the *Mālinīsloka-vārttika* and the *Tantrāloka*. I cannot quote any conclusive figures, but it seems that there are many parallels and quite a few almost identical verses between the second Kāṇḍa and parts of the TĀ, but almost none of the first section of the first Kāṇḍa, i.e. vss. 1–399. Although there is the possibility that the *Pūrvapañjikā* has dealt with the same issues, this section of the *Vārttika* was unique enough to be referred to by Abhinavagupta himself in the last chapter of the *Tantrāloka* for its description of the descent of the five streams of the Saiva revelation:

"The nature of the [five] streams, starting from the immovable highest state, has been taught by us in the Mālinīślokavārttika in detail and those eager to know should be able to understand it from there. But we do not sanction useless repetition. ¹⁵

^{13 &}quot;The whole work has been thrown into two parts or Kāndas, the first part being devoted to the subject matter dealt with in the first seventeen chapters in the above Tantra and the latter throwing light on the remaining portion." First page of the Introduction to the Kashminas Edition of the Vārtika.

¹⁴ See SANDERSON (1992) for dualism in the Mālinī, and SANDERSON (1997) for the interpretation of the eighteenth chanter.

Chapter 3 The Text of the Mālinīślokavārttika

3.1 The Names of the Text

The Tantra which is the basis for Abhinavagupta's commentary is called Mālinīvijayottara or abbreviated Mālinīvijaya and our text is therefore called Mālinīvijayavārttika (MVV), Mālinīvārttika, or Mālinīslokavārttika, the last one being used by Abhinavagupta himself to refer to the text in the TA. There have been a few misconceptions about the name of the text and some remarks in this matter are necessary for clarification.

In his article on the Works of Abhinavagupta RAGHAVAN notes: "Further, on p. 107 of his Tantrasāra, (Kas. Texts, XVIII), Abhinavagupta makes mention of his Tantrāloka and adds to it a perplexing reference to a śloka Vārttika. Are we to understand a work of Abhinavagupta here, and if so, whether one of his known works or a new one?"1 The text under discussion runs as follows: anvartham cătra darsitam tantrāloke ślokavārttike ca. Commenting on the same passage in his Krama Tantricism RASTOGI says: "Besides, Abhinava refers to one ślokavārttika in the Tantrasāra. It is uncertain whether this is identical with the famous Mīmāmsā text of the same name by Kumārilā. But the way Abhinava refers to it and the context in which it finds a place, makes it quite probable that Abhinava might have attempted a work under this name. Or else it might be another name of the Mālinīvijayavārttika."2 In his introduction to the Tantrāloka RASTOGI modified his view: he quotes references to the Tantrāloka under the name vārttika and saḍardhaślokavārttika, which are given by Abhinavagupta in the *Īsvaraptayabhijñāvimarśini*. As the TA is quoted there, one must conclude that the TA has indeed been called slokavārttika. But from this and the "non-discovery of any text by the name of the Ślokavārtika (pertaining to K.[ashmir] S.[aivism?])" he concludes that the cross-reference in the Tantrasāra can only mean "in the Tantrāloka, which is

The confusion about the term ślokavārttika arises, because it denotes above all a type of commentary; as the one by Kumārila was perhaps the most wellknown, it could be referred to as the Ślokavārttika, but technically both the TA and MVV are ślokavārttikas and the fact that the name of the commentary is used a few times for referring to the TA does not exclude the possibility that it may be used for the MVV in another context. If, moreover, the names Tantrāloka and Ślokavārttika are combined with "and", as in the Tantrasāra passage under discussion, there is no need for RASTOGI's laborious interpretation. We find the correct interpretation already in GNOLI's translation of the Tantrasāra: "nel Tantrāloka e nel commento in versi al Mālinīvijava."4

3.2 Editions and Manuscripts

The MVV appeared in print for the first time in 1921 in the Kashmir Series of Texts and Studies (KSTS)⁵ and has, to my knowledge, never been reedited. We can ignore a version of the text that appeared in 1985 as a small booklet ed. by Krishnānanda Sāgar, since it contains the text of the editio princeps, but the misprints produced by the new typesetting and the omission of the critical apparatus makes it virtually useless for this study.6

It is not easy to estimate the value of the first edition. Despite its shortcomings we must be very grateful for it, as for the whole KSTS, without which this segment of Tantric philosophy would still be studied from the Sarvadarśanasamgraha. From this perspective to lament the lack of attention to detail would indeed be unfair, because the editors who wished to print virtually all the main texts of the known Śaiva philosophy of Kashmir could not indulge in long discussions. However, it must be noted that the editors sometimes decided on a text that hardly makes sense or is not even metrically correct.

The KSTS edition is based on two manuscripts which are described in the introduction as follows:

¹ RAGHAVAN (1980), p. 22.

³ III. 259. mayā ca vārtike etat vyākhyātam; III. 106f; anvārtham cātra daršitam tantralok flokements slokavārītike ca; 1, 33: yathoktam mayaiva srīsadardhaslokavārītike tantrāloke. See RAS-

⁴ GNOLI (1979), p. 190.

⁵ Sri Mālinivijaya Vârttikam of Abhinava Gupta. Edited with notes by Pandit Madhusudan Kaul Shastri, KSTS XXXI, Srinagar 1921.

⁶ śrīmadabhinavaguptācāryaviracitam mālinīvijayavārttikam. Published by Krishnand Sagar, Varanasi 1985; English Title "Shri Madabhinavaguptacharya of Malinivijayavartikam"

(a). This Ms. belongs to the manuscript section of the SRI PRATAP SINGH PUBLIC LIBRARY. This is one of the oldest Mss. in the stock. Its leaves are torn out here and there and number 250. The character in which the Ms. is written is old Såradå [.] Kashmiri paper of old type, one-half Foolscap is size, has been used in the Ms. On an average, a page contains 13 lines with sixteen letters in each. The first 11 leaves of the Ms. seem to have been restored recently. The Ms. is complete with a few slips of pen. It does not bear any date. [...]

(b). This Ms. is on new Kashmiri paper. There is no mention of the date when the copy of the Ms. was made. It is complete and is written out in Săradă character with a few mistakes here and there. It belongs to late PANDIT RAMADEVA BHATTARAKA son of PANDIT SUKADEVA of Srinagar, Kashmir, who lived the life of a Saiva teacher to the last day of his life."

The editors record variants in the footnotes and make a few emendations, but unfortunately fail to specify the manuscript from which the variant was taken. Judging from the edition of the Mālinīvijayottaratantra, a comparable volume in the same series which has a substantial list of corrections, the lack of a "suddhipātram" in the edition of the Vārttika is also slightly discomforting. Under these circumstances it would no doubt be desirable to find and recollate the manuscripts used by the editors, but the current political situation in Kashmir is not conducive to search tours, so no attempt has been made to retrieve the Śāradā sources. As it can be made plausible that the whole recension is contaminated, it seemed unnecessary to risk one's life for establishing this beyond doubt.

After an initially fruitless search in manuscript catalogues, Dominic Good-ALL drew my attention to the new catalogue of the Śrī Ranbir Library, Jammu, which lists two Devanāgarī manuscripts of the text. With the kind help of B.P. Sharma, Jammu, I was fortunate in obtaining Xerox copies of both mss. After a first comparison with the KSTS edition, my enthusiasm was dampened, because it was found that both manuscripts more or less share the omissions of the edition. This means that all sources that are available at present derive from an archetype that was copied under circumstances where a second copy that still had a complete text could not be obtained. Bearing in mind the history of the Jammu collection, namely the fact that many of its manuscripts are Devanāgarī copies taken from Śāradā archetypes in the late nineteenth century one might expect these two mss. to be no more than transcripts of the two ms. used for the editio princeps and thus only of limited help for the constitution of the text. Fortunately this is not the case. The manuscripts certainly derive

from Śāradā archetypes, but not only is one ms. dated comparatively early (AD. 1789), both often retain the correct reading against the Śāradā sources,

But even with these additional sources a meaningful text could often only be established through conjecture; out of the more than hundred instances in which the present edition differs from the KSTS edition, about half are conjectures. There are cases where one would want to argue that the conjectural reading was with a high probability the reading of the archetype, in other cases the suggested readings are diagnostic, that means they merely allow us to make sense of an otherwise meaningless text or help to restore the metre.

Prof. SANDERSON drew my attention to a further manuscript (G) in which only a few verses are quoted.

3.2.1 Critical Apparatus

In the apparatus of the present edition all variant readings 7 of the manuscripts, with the exception of the purely orthographical variants that are mentioned below, have been listed according to the following conventions: a lemma does not indicate the beginning, but the full passage that is replaced in a particular manuscript with a different reading; it is not reported, if this variant is unmetrical. For instance: 352b svatantram: *svatantratvam* J_2 , means that in pāda b of verse 352 the reading of J_2 is unmetrical, not that one more syllable of the critical text has to be replaced to arrive at this variant.

As mentioned above, the *editio princeps* indicates the source of the readings from its two sources only as *iti pāṭhaḥ*. These readings are marked summarily as "K" in the present edition. The siglum K_{ed} ("Kashmir Edition"), although describing the critical text of the *editio princeps*, is therefore also ambiguous: in cases where "K" is not mentioned it means "both Śāradā mss."; where "K" is specified it describes only one of them. All cases where the editors have emended a passage, or where I suspect a misprint, are mentioned explicitly.

As the siglum K, owing to its ambiguity, appears only where the two Śāradā mss. disagree, it was not possible to provide the present edition with a fully positive apparatus. It was on the other hand necessary to give a positive apparatus where K's reading was accepted, but was not identical with K_{ed} , that is, in cases like the followine:

⁷ Unlike in classical Greek and Latin there are hardly any published collations of a substantial number of manuscripts in the field of Sanskrit editions; under these circumstances to produce a selective apparatus is inefficient, as it makes improvements without a complete re-collation impossible.

173d pratipatsyate (J_EK): pratipadyate Ked.

Here the readings of J_{Σ} and K constitute the critical text, whereas the *edition princeps* has accepted *pratipadyate* on the basis of the other Śāradā ms. If this reading were to appear as

pratipatsyste: pratipadyste Ked.

it would mean that K_{ed} records no variants and our critical text rests on the agreement of the remaining mss., i.e. J_1 and J_2 . This practice may not be completely satisfactory, but it seemed to be the least complicated one, and one which reflects the nature of K_{ed} appropriately: for the purpose of collation K_{ed} is not fundamentally different from a – however skillfully – contaminated ms. with variants noted.

The following features of the two Devanāgarī mss. are not given in the apparatus: punctuation, verse numbering, most cases of gemination and degemination, orthographic variation, like the use of anusvāra for class nasals and as for hs (e.g. purassara), mm for m, and in some cases idiosyncrasies of the scribes; the use of the ligature sca for cca for instance has been noted only in the manuscript description. The confusion of the partly overlapping shapes of na and na in the devanāgarī mss. has not been recorded except in suspicious cases, because to note, for instance, that the ta in atah looked slightly more like a na would have certainly been an over-interpretation of the scribes intention. A list of abbreviations is to be found on p. 55f.

3.3 Description of the Manuscripts

The manuscripts are described in the new catalogue of the Shri Ranbir Sanskrit.

Research Institute in tabular form: 9

J₁ 623 (20 ka 2) Mālinīślokavārtika, P[aper], D[evanāgarī], 19.3 x 13.8 cms. 286 leaves, 18–19 lines, 15–21 letters, good, fairly old.

9 PATKAR (1994), p. 1154. They are not listed in STEIN's older catalogue. The new catalogue as will become clear from the description, does not give the impression of being reliable.

J₂ 622 (1639) Mālinīvārtikam, P[aper], D[evanāgarī], 23.4 x 14.5 cms., 129 leaves, 16 lines, 10–14 letters, good, fairly old.

I have not been able to work from the manuscripts themselves, but from very carefully produced Xerox copies, for which I have to thank B. P. SHARMA and the librarian of the Shri Ranbir Sanskrit Research Institute.

3.3.1 J1

Catalogue number and title: 623 (20 ka 2) Mālinīślokavārttikam.

The tag on what seems to be the outer wrapping has the following text (devanāgarī in italics): "Shri Raghunatha Temple MSS Library, JAMMU. No. 20 ka-2. Title: mālinīšlokavārttikam. Author: abhinavaguptah. Extent 286 patra. Age. Subject: tantra". The left upper margin has a further number: 6068.

The description in the catalogue is unfortunately very inadequate. Although the MVV is probably the most exciting text contained in this manuscript, it is in fact a codex which contains a variety of works, written in Devanāgarī as well as in Śāradā. A full description will have to be the subject of an independent study.

The Mālinīvārttika is in Devanāgarī. It spans folios 1–62 and is numbered continuously on the left lower margin. No marginal title.

Beginning (1'): oṃ namo vighnahartre oṃ namaḥ śivāya \parallel oṃ vimalakalā

End (62'): iti mālinīslokavārtikam śrīmadācāryābhinavaguptaviracitam samāptam || || śubham astu sarvajagatām || ||

The writing is characterized by an almost fixed width of the stroke. There are corrections as well as marginal variants (15d, 31b, 86b, 95a, 101a, 186d) by a second hand (called J_1^2). A scribe with more practice in transcription from Śāradā must have gone through the manuscript and occasionally corrected the confusion of ma and sa (65d), but also added variant readings.

There is occasional help for reading, as for instance "commas" in 23: tadecchā tāvatī, jūānam tāvat, kriyā hi sā.

The ligature for sna is a na "closed" by a horizontal stroke. Apparently the writing utensil did not allow a variable width of the stroke, so that sna and sma look virtually identical.

⁸ This is just a writing mistake. Because the scribe did not consider the initial vowel of the next word he placed an anusvara above the last aksara, and then added the m. Cf. Winter RAU: Vakyapadiyarameyasamgraha. Ein anonymes Scholion zum zweiten Kinda des Väkyapadiya [...], München: Wilhelm Fink 1981, (Abh. d. Marburger Gelehra Gesellschaft, Jo. 1978, Nr. 2), S. 97(8).

3.3.2 J2

Catalogue number and title: 622 (1639) Mālinīvārtikam.

The tag on the outer wrapping has the following text (devanāgarī in italics): "Shri Raghunatha Temple MSS Library, JAMMU. No. 1638/ka, Title; mālinivārtikam. Author. Extent 129 patra. Age: saṃ 1846. Subject: tantra." The left upper margin has a further number: 6028.

Devanāgarī. The abbreviation for the title *mā*, *vā* and the folio number are in the upper left margin. There are no dandas and the verses are numbered only in the first few pages. Dated A.D. 1789. ¹⁰

Beginning 1': mālinīvārttikam in the centre of the page, below a stamp of the library. The text starts on 1^v after a few invocations: śrīgaṇapataye namah śrīgurave śivāyoṇnamaḥ śrīdevyai siddhidāyinyai namaḥ om namo vāgdevyai oṃ vimalakalā....

End: iti mālinīslokavārtikam srīmanmahāmāhesvarācāryavaryastīmadabhinavaguptapādaviracitam samāptam iti sivadam bobhavītu sadbhaktānām || subham bhavatu || srīmagare liptam 1846 caitre

Paleographical Notes: ya and tha are sometimes indistinguishable (5d: pathe=paye). śca and śśa are identical.

3.3.3 G

"Mu I 30" kept in *Niedersächsische Staats- und Universitätsbibliothek*, Göttingen, and described in detail in JANERT AND POTI (1970), No. 803f. This is an undated Śaradā paper manuscript that contains the few verses from the *Vārttika* identified below:

Mu I 30 MVV 15^{rI3}-15^{vI} I.1012cd-1017 15^{vI-I3} II.35-40

Then follows the attribution of the passage: ity ācāryābhinavaguptaguravo mālinīvārtike || tathā tatraiva, and another quotation from the text:

Mu I 30 MVV 15^{v15-21} I.206cd–209b 15^{v21-24} I.258–259 15^{v24}–16^{r3} I.255cd–257ab 16^{r4-7} I.271–272

3.4 Textual Criticism

3.4.1 General Principles

Unfortunately there is not much written on textual criticism as applied to Classical Sanskrit, nor is there consensus about the best approach. ¹¹ The discussion of the theoretical problems in other disciplines evinces the wide divergences that exist: the BÉDIER school is extremely sceptical about the validity of editorial judgements, which results in an unwillingness to do anything else than print "the best" manuscript. ¹² This rests on the assumption that the understanding of a medieval scribe must be nearer to the text we wish to publish than that of the contemporary editor. It is apparent that this cannot be applied to Sanskrit manuscripts, many of which were written by scribes who could not understand the texts they were copying. Moreover the sceptic's attitude against attempts to edit texts and the deconstructional pessimism it displays is hardly appropriate for a discipline like Indology, where the need for reliable editions is so obvious.

The other main trends define themselves by the degrees of acceptance or rejection of stemmatology. For some the construction of a stemma of all manuscripts of a text is still the very heart of textual criticism and I shall therefore deal with the question briefly and examine its application for editions of Classical Sanskrit.

The idea behind stemmatic analysis is to find a method through which the editor can arrive at the original reading of a text without editorial bias; it was

¹⁰ The date which is hardly legible on the Xerox copy is added by hand and is confirmed by the description on the outer wrapping of the manuscript.

¹¹ In the field of classical learning there is protracted controversy about the methods including a good deal of polemic and durjananindā, see HOUSMAN (1972) and WEST (1973), p. 61.

¹² KANE (1969) (p. 158) summarizes the practical conclusions of this approach: "The current scepticism about conjecture extended, as it still may do, to the whole editorial process, and one form of the flight from judgement has been 'to condemn any critical treatment of manuscript material beyond a mere reproduction of the extant tradition or of one of its representatives." 'One should' (I quote a student of Bédier reporting the master's view) 'select a manuscript which is of the poet's own dialect, which is relatively old, which does not have many mechanical defects and one should reproduce this text without attempting correction unless there is a proved slip of the pen...versification should not be corrected."

thought that by establishing genealogical relations between manuscripts based on indubitable evidence one could mechanically arrive at the reading of the archetype without the interference of insecure judgements. One has to bear in mind that this method was developed by LACHMANN while editing texts wis what seemed a very simple textual history: the archetype was not too remove from the known manuscripts and all the manuscripts that contained insertions or could be proved to be contaminated were excluded from consideration. According to PASQUALI, LACHMANN, unlike his followers, was well away of the limitations of this method. But it was MAAS' handbook 14 that, with an exceptional clarity, set stemmatics as the standard for editing any text. 15 The criticism of this method, which focussed on its failure to recognise the press. lence of contamination, led to further modifications of the technique.

As foremost criteria for establishing the relationship between manuscrips are reckoned different forms of external evidence, like omissions in a grow of manuscripts which can be traced back to a mechanical defect in a unarchetype, 16 Apart from this special case the more common method is to identify relations by shared error. According to modern critics there remain the fundamental flaw "that the procedure is theoretically absurd. It designates its first step as classification by shared error whereas in fact it is with the ven identification of error that the process actually begins. If this act is indeed so self-evident as to require no methodological discussion, then so too, it would seem, is the whole process of editing, which is after all concerned with nothing other than the identification of error."17 One other assumption of the proponents of stemmatic analysis is the absence of contamination if a scribe conflated the reading of his source with that of another, his product became useless for the editor and early critics like LACHMANN discarded manuscripts that were demonstrably contaminated! There are different to

sponses to this fundamental critique of stemmatology, as for instance to declare contamination as non-existent.18 Another is to make modifications to the method, e.g. by introducing different phases in which the preliminary stemma is tested. 19 Whereas the first option is clearly implausible, proponents of stemmatology now acknowledge that any stemma is but an approximation to the real relationships; to produce an accurate stemma of a transmission is especially if manuscripts are lost - statistically impossible. 29 This means that for the greater part of Sanskrit texts there is hardly ever a chance to produce anything but such a pragmatic stemma. For establishing those stemmata GRIER, who acknowledges more recent criticism of the method, has suggested that one should "draw a bipartite stemma that demonstrates the most likely relationships suggested by common error according to the usual guidelines. using only readings from our category three, clear scribal errors". 21 because a multipartite stemma would automatically "eliminate a much higher number of readings" and allow the editor "much less scope in exercising their critical judgement to decide between competing readings."22 In order to explain why a stemma can be useful we have to take into account the criticism referred to above; a mechanical process of arriving at correct readings is meaningless, if we have to identify their counterpart, error, beforehand. Stemmatology can only work if the correct readings we wish to establish are different from those on which we have our stemma, i.e. we have to establish the clear cases in order to solve the unclear ones. If we further assume that contamination cannot be ruled out in a certain manuscript transmission, I suggest that we use the techniques developed for open recensions and try to produce what WEST calls "a serviceable stemmatic relationship", whereby one can attempt to solve

One other problem that has to be dealt with in order to understand the validity of the different approaches is the identification of the causes of error, which forms the more practical aspect of textual criticism.²³ In the case of Sanskrit there is for instance the transliteration from one script into another, which has to be kept in mind as a source of specific "scribal errors". The two Devanāgarī mis, of the Vārttika, for example, contain errors which indicate that their archetype was written in Śāradā. Other errors that can be expected

¹³ For the critique of this method, see PASQUALI (1929), p. 427ff.

^{15.} MAAS is in fact quite cautious; he says that the stemma has to be tripartite and that the while stocession has to be free from contamination for his method to work, but his short tender give the improvious that contaminated recentions are rare. Correction of errors by serber for instance reckoned as "untypiach". According to the more realistic handbook by Was (1973), p. 72, "only a minority of textual traditions are closed".

^{1.6 &}quot;A spectacular example is found in the manuscripts of Epictetus, where one manuscript is been found in the manuscripts of Epictetus, where one manuscript is been defaced with a large greasy stain and all the others are lacking just the oblinenced pure sage. But this example is very much an exception, and despite recent advances palenging has not yet managed to provide evidence about the relationship among document that a strathiguous." Perrenson (1987), p. 81.

are, for instance, confusion of aspirated and non-aspirated consonants, if - like are, for instance, contains, it - like in Kashmir – regional pronunciation does not differentiate between them. But the production of a copy from another manuscript involves also the category of more conscious processes of alteration. WEST's description for Greek of more conscious problem for Greek and Latin applies to Sanskrit to a considerable extent, 24 but there are further indications that the phenomenon of contamination should never be underrated the comparatively short life-span of manuscripts in India and the consequently high rate of copying - in connection with the fact that probably most of the scribes could hardly follow the text they were copying – must have led to very faulty texts that regularly had to be purged of errors. ²⁵ This no doubt was done by scholars, especially in the process of composing commentaries on a text 26 If we keep in mind that writing materials were at times precious, the copying will have been undertaken only when necessary. The first attack of insects would hardly have prompted the rewriting of a whole codex. There are also special cases like Kashmir, where one can find perfectly plausible texts almost without scribal mistakes. The reason, as noted already by BÜHLER, is that there often Pandits instead of half-literate scribes would copy manuscripts.27

It might be argued that contamination should at least be ruled out in the case of manuscripts that are not too far in time from the author. But even if we do not take Al-Bīrūnī's caustic remarks that Indian scribes are able to ruin a text in one or two copies as literally true, ²⁸ we must conclude from a recent example that in the case of works with a wide appeal and therefore swift dissemination mere decades can be enough to produce a contaminated text! ²⁹

A special case is the revision of a text by the author himself that was already circulating in manuscripts; ³⁰ every editor must dread the day when he will be forced to accept such an assumption. In the case of Sanskrit a more typical source of error is certainly the practice of memorizing texts. ³¹ Whereas the distorting influence of quotations in Latin and Greek is supposed to be due to "inaccurate memory", ³² it is more likely in the Indian context that a scribe substituted the reading he had learned by heart for the one in the manuscript, the more so if we recall that Indian culture always had a higher regard for oral than for written knowledge.

The conclusion must be a strong devaluation of stemmatology except in specially proven cases and the application of methods designed for "open recensions". It can nevertheless be very helpful to produce a stemma from evidence that is less vulnerable to contamination, like clear scribal errors, omission etc., in order to have a criterion for selecting a reading if all other methods fail. ³³ If we ignore special cases like compilations, ³⁴ our guidelines must be the canons for the edition of open recensions, ³⁵ once contamiation is proven. The main rule is that unless criteria of grammatical, metrical or contextual plausibility etc. force us to emend the transmitted reading, ³⁶ a reading without variants is accepted as archetypal; if variants exist, the one that can explain the origination of the others is accepted as primary. The application of the last rule leads to a variety of further considerations: often the more difficult reading is original, as

^{24 &}quot;The fact that errors occur in copying, and that the comparison of different manuscripts brings variant readings to light, is no modern discovery. It was well known in antiquity, as well as in the Middle Ages, and the precaution was sometimes taken of checking a newly-made copy not only against its immediate exemplar but against another manuscript. When a variant was noticed, it might be introduced into the new copy by correction, or it might be noted in the margin or between the lines [...]. When a copy furnished with this kind of primitive critical apparatus served in its turn as an exemplar to another scribe, he might of any of four things. He might preserve both the variant in the text (t) and the marginal variant (v) in their places; he might retain t and omit v; he might adopt v in the place of t, without mention of t; or he might put v in the text and t in the margin. This confluence of readings from more than one exemplar is known as contamination." WEST (1973), p. 12.

²⁵ Compare modern Sanskrit śodhayitvā prakāś etc. for "to edit". See APTE (1983), s.v.

²⁶ Although many Indian commentators mention and discuss variant readings there are hardly any accounts of the methodology. We can imagine that it must have seemed obvious to those who claimed scriptural authority. In the introductory verses of his Matangapārameśvaruvīti Rāmakantha says that the commentator has to choose from among "differing readings correct and wrong, which stem not from the original, but from error committed by studens [who were copying the texts?]. To point out these errors is unwise." pāṭhabhedo 'tra sādhar wā tadanyo vā na mālataḥ | kiṃtr adhyetṛbhramāt tena tatpradarsanam ajñatā ||. See Deminic GOODALL's forthcoming work on Rāmakaṇtha's Kiranatantravṛtti (Introducion) for a translation of the whole passage. But exegetes do use further arguments to defend heid choice of variants, for instance, the evidence of old manuscripts (e.g. Svacchandatantroddyota 8.12ab; purāṇapustakeşu tv avigānenādya eva pāṭho dṛśyate), and it would be very useful to collect them.

²⁷ BÜHLER (1877).

²⁸ The passage is quoted in SLAJE (1993), p. 4, fn. 3.

²⁹ ROCHER (1985).

³⁰ See WEST (1973) for historical examples.

³¹ See BÜHLER (1896), p. 4 on mukhasthā vidyā.

³² WEST (1973), p. 17

³³ As SRINIVASAN has pointed out, "Kontaminationskritik" is unable to select a correct reading from true synonyms.

³⁴ See SRINIVASAN (1980) for a detailed study of the composition of the Năţyaśāstra. There are also attempts to apply the whole apparatus of techniques, developed for the study of the new testament (source criticism, redactional criticism etc.), to compiled works. Compare also ARRAJ (1988), p. 21ff.

³⁵ The best work for this purpose is SRINIVASAN (1967).

³⁶ See KANE (1969) for a discussion of emendation.

scribes tended to substitute the easier variant. 37 The other principles are related scribes tended to substitute the avoidance of ambiguity or redundancy by reductors. In cases where no clear decisions ³⁸ are possible, stemmatic considerations can be of help.

3.4.2 The Textual Transmission of the Vārttika

Any analysis of the stemmatic relationship between the surviving manuscripts of the Vārttika is marred by the poor design of the editio princeps. We cannot even exclude that the editors have silently corrected "simple" scribal mistakes. thereby further obfuscating the relationship of their sources. This and their failure to report the sources of variants invariably degrades the edition to the status of a contaminated manuscript thereby pushing the relationship between the Śāradā mss. out of sight.

The first observation concerns the lacunae: virtually all the omissions in the K_{ed} are to be found also in the two Jammu mss., but there are further omissions in the Jammu manuscripts, quite a few of them identical ones. One insertion is shared by J_{Σ} and K. ³⁹ This means we have to conclude that the text of the Mālinīślokayārttika survived at one time in its history only in one manuscript, from which all other copies derive. 40

Judging from the variant readings it might seem that the patterns of agreement point to a group formed by J1 and J2 against the Śāradā mss. But if we look closer into the quality of errors that separate these groups, we find almost no agreement between the Jammu ms. in "clear scribal errors"; 41 most of the agreement is in meaningful variants, which may have arisen through contamination. One might argue that we may at least assume that the contamination originated from the archetype of $J_{\boldsymbol{\Sigma}},$ but as even the corrector of J_1 had access to variants overlapping with the Śāradā mss. (cf. the marginal note in 15d), it is more plausible that the Vārttika is transmitted in an open recension. The high percentage of metrically correct and more or less meaningful variants among readings point to considerable redaction in the course of its transmission.

3.4.3 External Evidence

An important issue is the status of the external transmission of parts of the text in quotations. We have seen that all surviving manuscripts go back to an already incomplete and possibly quite faulty archetype; additional evidence from outside the transmission could therefore be extremely valuable. The observation that, compared to the variants inside the transmission of the Vārttika, the external witnesses sometimes preserve an abruptly different state of the text with sometimes even convincing variants might be taken as a proof of this. On the other hand there are several factors that demand caution: the Vārttika is quoted only a few times in later works, and - apart from one instance in Śivopādhyāya's commentary on the Vijñānabhairava these quotations are to be found in Jayaratha's commentary on the Tantrāloka. Since the source of these quotations is not mentioned, the strong variation could also indicate that Jayaratha, as suggested by GNOLI, sometimes quotes in fact from another, now lost text by Abhinavagupta, the Pūrvapañjikā. But even where it is clear that the Vārttika itself is quoted, another consideration speaks against using external evidence as equal to the transmitted text. It has been observed that Abhinavagupta's quotations are often not literal, even when he quotes scripture. This is only partly explained by the necessities of the metre; if we take, for instance, the recurring quotation from Kallata's lost Tattvārthacintāmani, we can see that even when writing in prose our authors did not feel obliged to quote literally. 42 The reason for this is to be found in the rules for Tantric exegesis (vyākhyāna) - expounded by Abhinavagupta himself in the Tantrāloka -, which do not demand a word for word explanation, but simply enjoin that the teacher should propound units of meaning (vastu) in the Tantra by various exegetical means. 43 This freedom in exegesis can be

³⁷ Generally the more difficult, but not the more unlikely reading ought to be selected (WEST (1973), p. 51). In my opinion SRINIVASAN's chapter 1.4.5.1 ("Einige Male läßt sich eine Lesung nicht, oder nicht befriedigend, interpretieren. Eben dadurch aber weist sie sich als primar aus.") takes the point too far to be made into a general principle.

³⁸ Those cases are typically variants that involve synonyms. Here the tendency of assimilation of related terms in the same context can serve as a guideline, (SRINIVASAN (1967), 1.4.5.11)

⁴⁰ There are of course many indications for this, as for instance 391a, where all mss. transmit a metrically faulty text – here the external transmission has retained a plausible reading.

⁴¹ Except 31c and 59a. The insertion of what could at least be seen as the completion of a quotation in 257 is perhaps insignificant.

⁴² tuțipăte sarvajñatădayah TÂV, tuțipăte sarvajñatvasarvakartṛtvalābhah PTV, tuțipāte 'pi sarvajñasarvakartṛtvalabdhṛtā MVV 177.

⁴³ In chapter 28 of the TA there is a section in which the Devyāyāmala's injunctions for explaining Agamas (vyākhyānavidhi) are taught: after a preparatory ceremony, which includes the drawing of lotusses on the ground and the worship of the goddess of speech (vāgīśvarī), the Guru is to explain the five sambandhas, to show the consistency of the work, and use different exegetical methods, as for instance "leaping like a frog" (mandākaplava), that is, omitting irrelevant passages, or "looking around like a lion", which could mean 'taking relevant passages from different parts of the text together'. Abhinavagupta then goes on to

observed in the practice of quoting: if necessary, even the words of scripture are altered by Abhinavagupta. We have to expect that Jayaratha does the same and that his quotations from the Vārttika are not on a par with the manuscript transmission of the Vārttika itself. For this reason external evidence has only been accepted against the manuscripts in few well-founded cases.

3.5 Stylistic Peculiarities

A comprehensive description of Abhinavagupta's style cannot be attempted in this thesis, though a few observations, notably those concerning the constitution of the text, may be made.

Despite being metrical, the text, as it were, does not comply with its form: the pādas and even verses are quite regularly no indication of a self-contained sentence, and even the end of a sentence may occur after the first word of a pāda. Although he never violates the metre, the author demonstrates that he will not be forced by metre into limiting his argument to 32 syllables: there are Anustubh stanzas with six pādas which have been observed also in other philosophical works. 44 This, among other features, is peculiar to our author's philosophical style, especially to his concept of a slokavārttika, for it appears also in his Tantrāloka, but not in his Stotras. An oddity in the construction of the verses in the Tantrāloka, namely the connection of the ahnikas in a way that the first half of a verse ends one chapter and the second half starts the next, is discernible in the Vārttika too - although less obviously in a text without clear

An enlightening quotation in his Vimarśinī on IPK 1.5.12 shows that even a more radical breach of the usual rules was considered admissible in philosophical writing by Abhinavagupta. When interpreting pādas b and c (!) of Utpaladeva's Kārikā as a compound, he justifies this by saying: "[The rule that] a word must [coincide with] the connecting point of two half verses is a convention in poetry, but not in technical literature." 46 Although far-reaching conclusions

cannot be drawn from this passage, it has prevented me from conjectures to avoid inelegant caesuras. 47

There is no indication that prose is used in the Vārttika. The singular instance of a tathā that is outside the verse and introduces a quotation is treated as a scribal insertion, albeit an early one. Usually Abhinavagupta does not hesitate to rephrase quotations in order to insert an iti. 48 The line of prose after 126 is also clearly a scribal insertion.

Abhinavagupta does not limit himself to a terse philosophical style in the Vārttika. Although this cannot be a hard and fast rule, one will note that a more poetical diction prevails when he describes his own doctrine beyond the constraints of debate, - often indicated by a concatenation of the buzzwords of esoteric exegesis. This use of poetic language might be interpreted in two ways; it either serves to make doctrines that contain erotic symbolism less offensive by connecting them to the language of the śrngāra-rasa; or it is intended to provide a connection between aesthetic experience and the Kula concept of enjoyment. Whereas the former is difficult to rule out, the latter is difficult to prove.

Other observations:

alam is used in the Vārttika with the instrumental in the well-attested sense of "enough with ..." (68c, 116a, 159a, 239c, 309c, 720d, 760b), but also guite often without instrumental (125a 165d, 199b, 347a 388b, 408b, 449d, 483b, 646c, 653b, 758d, 815d, 960b, 1075d).

But in two cases, namely vss. 125a and 347a, to assume an adverbial sense of the word is awkward. The phrase used there is tad alam prakrtam nirūpyate/brūmah, which I would interpret as an eliptical use of alam in the sense of "enough". 49 The same phrase is used, with an insertion of the

Abhinavagupta seems to share with his contemporary Bhatta Rāmakantha the idiosyncratic use of yatah at the end of a clause (251b, 327b). 50 There is also one instance of this in Abhinavagupta's prose (ĪPVV, vol.1, p.4-5; quoted in the commentary on 25cd-28ab).

describe other exegetical methods. The Guru, knowing the wording of the Tantra, should explain the meaning [of a statement] (vastu, i.e. a unit of sense, a statement: vācyaṇi vati a mülasüträdi | aparam vastv iti süträntaram | TĀV 28.406) by using the techniques of unitaavarrana, bādha, prasanga, tarka and others. (tantrāvartanabādhaprasangatarkādbhi) a sannyāyaih vastu vaded vākyajāo TĀ 28.402.) See also DYCZKOWSKI (1988), p.14.

^{45 288}cd and 289ab, although constituting a syntactical unit, connect two "chapters" of dic work.

⁴⁶ ardhayuk pādaviśrāntih iti hi kāvye samayah, na śāstre, IPV 1.5.12.

⁴⁷ See, for instance 253ab, 282ab, 304ab.

⁴⁸ MESQUITA has argued that some words that are standing outside the verse, like tathā, uktaṃ ca and iti, are original in the Samvitsiddhi, but there they occur more than once, and in this matter every author must be treated individually. See MESQUITA (1988), p. 21.

⁴⁹ The dictionaries do not record this, and I could find only one instance (Bhāskarī, vol. 1; p. 3. line 11) in literature.

⁵⁰ See GOODALL (1995), p. vii.

55

radhi, praroha etc. is used in a peculiar sense in this system. It has the connotation of making the resolve, or convincing oneself of a practice and following it, and is therefore not too far from the meaning given by BÖHTLINGK in the pw ("Entscheidung") for one passage in the Raja. 3.6 Notes on the Translation and the Commentary

Abhinavagupta's Vārttika is undoubtedly a difficult text and the challenge in translating it is certainly not to imitate his sometimes obscure style. A translation should reflect the author's intention and not the translator's difficulty with the text, for which he can blame no one but himself. The resulting "simplification" is due to two techniques; firstly, the transformation of the grammatical construction of the original into an idiomatic expression of the target language; secondly, the insertion of syntactical parts which are regularly omitted in Sanskrit, but required in English. The general remedy for the first is to give literal equivalents in the footnotes, for the second it is to use brackets. In those cases where the inserted word was part of the idiomatic expression itself, brackets were not used, because this might create the impression that almost nothing of the sense attributed to a verse in English could be found in the Sanskrit. In general I have not tried to present an irrefutable, but low-profile translation, but an interpretation of this difficult text which, if wrong, may at least serve as a pūrvapakṣa. The same reasoning stands behind the high number of conjectures.

The commentary on every unit, i.e. one or more verses, is usually split into two parts: notes on separate points of grammar, vocabulary etc. and a more or less running commentary that focusses on problems of interpretation.

The mother is resplendent (mahas) with the ever new creation that rests on the immaculate power,

and the father, whose form is full, has hidden his desire in his five faces.

May my heart which is the emission of vibrancy from this couple and [therefore] full of the supreme nectar shine, (1)

May [my] teacher surpass all, who with the rays of his knowledge appearing everywhere has made the lotus of my heart blossom [and] who entrusted me with the currents of doctrines (arthaughān) that are dedicated to destroying the distress [of samṣāra]. [These doctrines] are radiating like [jewels] in the five streams [of Śaiva revelation], which have as their aim the 'half of [the] six' [that are formed by the five streams] together with its reflection. [This teacher,] (Sambhunātha, who was purified by [his teacher,] the glorious Sumati and is favourable towards true devotees, may he be pleased with me and satisfied with this [offering of the] flowers that are my work. (2–4)

I adore [my father], a scholar whose name is Cukhala and who is more venerable than even the teachers. It is through his education (saṃskāra), that I have become free from attachment. (5)

May the glorious, high-minded Bhūtirāja, who [being my father's teacher] is even higher than him, surpass all, he whose zeal is directed towards raising the community of devotees [out of saṃsāra]. (6)

The [literary] compositions of the bliss of consciousness, which are exuded by the glorious Utpala[deva] because of [his being] awakened by the glorious Somānanda and spread into all directions, surpass all; in this they resemble compositions of fragrance which are exuded by a water-lily (*utpala*) which is beautiful (*strī-mat*) because of its awakening [=blossoming] which is the joy of the moon of beauty. (7)

The words of the glorious teacher Laksmanagupta, who teaches his [i.e. Utpaladeva's] system, the [philosophy of] recognition which cuts off samsāra, excel. (8)

By whom the bee of my mind, though (api) intoxicated only by relishing countless new tastes, is [eventually] satisfied with the ultimate pleasure [/bliss that is the ultimate reality] and, attaining unity with it, remains so in itself [/its own self], that a wealth of different sounds [/doctrines] is opening in her. (9–10)

Since (yat) I shall - repeatedly entreated by my worthy pupils Karna and Mandra - explain the meaning of the doctrinal statements (vākyārtha) in the glorious Mālinī[vijayottaratantra], sometimes (kvacit kvacit) through giving up, when appropriate, lower [forms of interpretation] (itara) in the sphere of both denoter and denoted, [for this reason] this treatise is fit (sādhu) for this whirlpool (āvarta) of approaches (vartanam) and is [therefore] a vārttika.

We adore the collection of rays of the moon of Siva, which shine day and night but are not within reach of everyone and [therefore] ever new [at night] and hidden [during the day]. (13)

The rays of the moon of knowledge which issue from the face of Paramesa [i.e. Siva] and are capable of destroying [everything] opposed to universal bliss surpass all. (14)

The vast knowledge that is produced in the beginning (prāk) from the limitless reality (sadbhāva) that alone is identical with the world (bhāva) and that is the pervading nature (vaibhava) of the mass of the moon's (tad) rays has spread (tatam), [still] of the same nature (tādṛk), free from things to be accepted or shunned that are created by its own creative power $(m\bar{a}v\bar{a})$, and diversified merely by its own expanding manifoldness of rays. 2 This [knowledge] whose nature is articulation is the heart of the highest Lord [Śiva]. (15-17ab)

When Mahesvara unites even there with the power that is always part of his self and attains to supreme perfection, then his highest face, which is the abode from which emission flows,3 which is beautified through its universal bliss rising from the unfolding of the highest reality [, appears]. Since [this face] is established as the seed of the universe without differentiation into further faces (bhāvi), 4 it is called heart, vibration, knowledge (drk), the highest [level of speech], essence, nameless, wave etc. (17cd-20ab)

This is the supreme, primordial trinity, in which all powers are yet undivided. In it contraction [resulting from] the fear (sankā) through the appearance of objects vanishes and the three [powers] of the subject, i.e. will, action and knowledge, are therefore completely dissolved in their own bliss. 5 (20cd–21) This has been described by the master [Somānanda] in his [work] "The Vi-

sion of Śiva" as follows: "When he [Śiva or the self] remains [in this state of being] dissolved in this experience of merely bliss of consciousness, then [the powers of] volition, cognition and action are coextensive [with this state] 6 [and] he lives as the equilibrium of these three very subtle powers. Being immersed in the bliss that is consciousness, he is then undivided." (22–24ab)

[Opponent:] If [Śiva is] thus [undivided] and the self of the world, then how can there be - as [the possibility of] contraction is excluded - the riches of Sastras etc. which are rooted in the formation of differential thought? (24cd-25ab)

[Answer:] We teach that all knowledge is part of the light of consciousness and nothing but (ghana) being aware (āmarśa) of consciousness [itself], as it is [logically] connected to the nature of light. Here 'being aware' means the inherent quality of the light to shine [i.e. become manifest]. (25cd-26)

Is not this [conscious light that which constitutes] the flood of Śāstras? What is the use of further arguments?8 In this state (tatra) it [the flood of Śāstras] exists only as pervaded by the goddess of the highest [plane] of speech, but not vet differentiated into a mass of sounds which are used in every-day life and are a product of māyā. (27–28ab)

It is said in the *Pratyabhijñā* that "[only] what rests in the self appears [outside]. Without it an awareness of will could not arise. The nature of appearance is known as 'becoming aware' [of the objects that appear], otherwise the light, even though coloured by objects, would be like [that of] jewels etc. [which are coloured by objects but not conscious of them]." (28cd-30ab)

²⁰c pūrvam: sūksmam K TĀV I.I. 21d trayam: triyam J2. 22ab se-20c param: unclear insertion in the margin J1. vadrstavi; this phrase at the end of a page is repeated on the following page, again following 23b tāvat tāvat: tāvat Ji, tāvatīvat Ji 22cd-24 = Sivadṛṣṭi 1.3-4, which reads tāvaj plan by pādas a und b. ²⁷c para: parà 12.

^{5 &}quot;Therefore' translates the ablative in -vicyuteh. Lit.; "Because of the vanishing of contraction [...] there are three powers [...]."

⁶ Lit.: "then that [experience] is his volition, it is his knowledge, and of such [a nature] is his

⁷ Lit.: "The light that shines is of the nature of being aware." The rather free translation tries to express the purpose of the line in the argument, which is to define amarśa. 8 Lit.: "many (-dambara) other (anya) arguments". dambara could imply also "uscless"

kimca vah kaścanāmarśaś ciccamatkāragocarah ||30|| hlādatāpādivisayas tadāsau bhavati sphutah | tadvimarśāntarālambasamucchalanayogatah ||31|| paścăt susphutatām eti tathā ca gurur ūcivān | vathā svasamvidā siddham sukhādi vyavatisthate ||32|| na hi vyavasthāsamaye vedyate tat svasamvidā | tathāvasvopagantavyam svasamvitsādhanād iti ||33|| evam atrāpi paścād yaj jñānādyullāsavartmani | sarvābhedamayī bhūmir yāvad āmṛśyatām vrajet ||34|| tāvat taducitodāravimarśāmśasphutatvatah tādrk sa eva śāstratvam prāgvisargah prapadyate ||35|| etad eva tu vuktam syāt tathā hy anupadhau pare | śāstrārthe 'pi samācāraleśah ko 'pi vibhāvyate ||36|| sa nūnam sphutatādhāmabhāvijñānādiśaktimān uparāgāt tatas tattadvaicitryaparibrmhitah ||37|| vathā mukhasya tadvyaktisthāne 'psu mukure manau | khadge cañcalasadvrttasūksmadīrghādikā sthitih | 38| tad ittham parame rupe prodbhūtā jñānasampadah anavacchinnahrdayabījātmatrayasundarāh ||39|| vadā tūcchaladākārasvatarangāntarātmakān visisrksati bhāvaughān bhairavah śaktibrmhitah ||40|| tadā tā eva vijñānasampadas tadupādhijām īsatkriyāsamācārayantraņām samśritā iva | 41 |

Furthermore, any awareness, [the nature of which is to be] in the sphere of experience (camatkāra) of consciousness and which has for instance joy or affliction as its object, becomes therefore $(tad\bar{a})$ perceptible as soon as it appears as resting [inwardly] in this awareness; [and it is only] later that it becomes a clearly perceptible [outward object]. And one teacher said [the same] thus: "Joy and other [perceptions] exist [only because] they are established by one's own consciousness; they are not known through one's own consciousness at the time when they are [already] established as existent [i.e. independent of our perception]. Thus one must certainly accept that [their existence] depends on one's own consciousness as the cause."9 (30cd-33)

The same [applies] here too [i.e. to the emergence of the Śāstra], for (yad) to the same extent $(y\bar{a}vat)$ as, in the course of appearance of knowledge etc., the state in which everything is undivided comes into awareness, to that extent this first emission later (paścāt) takes on the nature of the Śāstra, as the parts of its superior awareness, which is fit for this [state], become perceptible. (34-35)

This [account of the nature of the Śāstra] alone is correct, for we suppose that even the highest doctrine of the Śāstra, which is without limiting adjuncts (anupadhau), comprises a trace of an extraordinary (ko 'pi) [religious] practice (samācāra). This [highest doctrine, as it has] the potential of cognition and [the other powers] which will become (bhāvi) manifest, 10 is through its influence (uparāgāt tatas) certainly nourished by a great diversity. (36–37)

A face appears [different depending] on where it appears 11: unsteady in water, in the correct round form in a mirror, small in a jewel and stretched in the [blade of a] sword etc. In the same way the riches of knowledge that are beautified by three [powers] lying undivided in the heart as seeds have arisen (prodbhūtāh) in the highest being (parame [sva]rūpe). (38-39)

But when Bhairava [like the ocean], brimming with power, desires to emit the floods of things that are [but] other waves of himself, whose forms are [continuously] welling up, then these riches of knowledge seem to take on constraint [due to] a practice which is [only] a slight activity, [a constraint] which is caused by the limitation superimposed on that [knowledge]. (40-41)

As soon as Bhairava who is knowledge becomes entirely identified with the flood of waves of objects (tat), but [remains] beautified by universal bliss, [when he] as the proprietor of his power is satisfied with no less than the plenitude of things, when this state of having a power is subordinated by means of his full, own power alone, then such a stream of knowledge consisting of articulation (vimarša), in which an extraordinary bliss (hlāda) appears through instruction in enjoyment (bhoga), pervades [everything]. ¹² (42–44)

For the fortunate ones even the multitude of enjoyments, if cultivated by confidence in this (yadīya) performance of the 'practice of consciousness', are transformed into an abode of salvation. (45)

As it is said [in the <code>Sarvajnānottara</code>], "God's desire for worship is excessive (nirbhara) through the intensity of agitation of his own power etc., especially (visesāt) because he is within [a group of] mothers". Through the increase of his power of sovereignty (aiśvarya) he receives the name of the <code>iśvara</code> state [i.e. <code>iśvaratattva</code>, where <code>śakti = idam</code> is predominant]. This God whose greatness is knowledge ¹³ appears and becomes manifold (<code>pra-paña</code>). (46–47)

Even in this state, the conjunction and separation of constituent endless things become innumerable by combination (sandhāna) with the division of the earlier state. Only by virtue of these limiting adjuncts the various riches (vibhūti) of action and knowledge in the Śāstra give up the state of knowing consciousness [inwardly] to spread [in an objective form], (48–49)

But [despite this multitude] the principal diversification is considered to be fivefold. As it will be said [later in the MVT] that "reality, although undivided, is fivefold," "because [it] is equipped with activity, with sovereignty, with an impelling force free of both, because of the cessation of will and because of independence." (50–51)

[Opp:] Then it would follow that divisions caused by space, time and [limited] power of action are not possible in this collection [of primary realities]. [A:] We certainly do agree, for there the *tattva* [called] 'time' is not known even by name. Although she pervades everything, the great goddess of time (mahākālī) does not manifest here. (52–53)

[Opp:] Then why do you accept the use of the words 'then', 'later', 'again', 'when' and 'afterwards' with reference to [something that is] undivided and complete in itself? (54)

[A:] We say that this is correct, but in reality these concepts of earlier and later do not exist for knowledge, even if the creation of *tattvas* has manifested perceptibly and time has unfolded. The reason is that time can divide [only] by being a qualifier [of something else]; and a qualifier [such as, for instance, a colour] is taught to be something which is distinctly (*bhedena*) perceptible only as coextensive [with something else], like 'a blue water-lily'. (55–57)

But it is never possible to perceive knowledge, as to be perceived something must appear; [but] this [appearance] is due to the grace of the light [of consciousness]. This [appearance] is light and it is knowledge; if not, it would be different from knowledge and the resulting limitation of light would indeed cause an infinite regress. (58–59)

Consequently those deluded people who describe knowledge not as expanding [to become the object], [but as] consisting of the expansion [i.e. manifestation] of the object, are deceived by their own words. (60)

Therefore time is unable to cause differentiation in consciousness, nor is this time capable of becoming a differentiator [i.e. differentiating quality] of the object of perception. For the universe does not exist outside of knowledge, otherwise it (tad) would not appear. (61–62ab)

[If we say that] objects ¹⁴ appear variously, because they are pervaded by light, then the world would be manifest (*viśvaprakāśa*) to everyone all the time. [But] if there is light which is called knowledge [i.e. light belonging to the subject], the [object] becomes manifest. (62cd–63)

If, however, [one were to suppose that] an object is different from light, it would [still] be cognized as having light as its essence. For if we say 'this object is without light' [i.e. does not manifest], the doctrinal position (śaraṇa) would be darkness [i.e. ignorance of the object]. (64)

But if [theoretically speaking] this non-light, which has the nature of an object, would manifest, it would certainly disappear, because its nature, which is to be without light, would perish. And even the Creator is unable to turn something into light which is not [already] of the nature of light. (65–66ab)

[Opp:] But so far [your position means only that] the state of objectivity appears as soon as there is light. (66cd)

[A:] This might be the case, but the reality (*vastusthitih*) is that in this way something different from light would shine, and if the nature of [this] object, which is to be different from light, would become light [i.e. manifest], then it would not be this object, that is manifested. (67–68ab)

So forget about [the theory of] a separate light; it is for this reason ($tasm\bar{a}d$) that Siva is in this way ($tath\bar{a}$) described as only light. The highest Siva alone (ya...sa) shines with inconceivable power and moves around without restraint because of his autonomy. In this way he is not impaired by the various forms in which he appears. (68cd-70ab) in which he appears. (68cd-70ab) [However,] this does not imply 15 that there is also some kind of omniscience

[However,] this does not imply be that there is also soline kind of ordinate. The perior everything [for we see differing limited experiences, e.g.] 'I, Caitra, ¹⁶ perceive the pot, not the cloth.' But 'he [i.e. someone else] perceives it. 'This cloth does not perceive [anything].' 'I know both pot and cloth.' 'I will perceive or I will not'. 'Thave known before, or sometimes [I have] not.' 'I come to know gradually, suddenly, in both [and] neither ways.' 'I know everything', and 'I know nothing.' 'I do not have the nature of an object', 'certainly (nanu) I do not exist' and 'I am always everything.' 'I, being one, am the world; how can the world be different [from me].' In these and other ways this one light appears [variously]. (70cd–74)

[Opp:] If there is any single thing that is not this light (asah), how could it be that there is not some other light?

[A:] O, how can this fool be instructed? It is only a single light that spontaneously (svātantryāt) appears in various forms. But in reality it is not manifold. [It is also] not undifferentiated, because this is disproved by the diversity [we perceive]. (75–76)

[Opp:] If the light of a cloth would exist in the light of a pot, it would cease to be the light of a pot, for it would be a double light. Such a thing may exist, [but] what you have described does not exist for us. [The objection] that the light of the [garment] in the form of a pot is not possible remains. (77–78)

[A:] But that is wrong. The light, as it is knowledge, pervades (*jṛmbh*) one's own self. Since this is its characteristic, [your] deceiving verbosity ¹⁷ is useless. (79)

It is said that the characteristic of matter is the fact that its light is limited. Knowledge [i.e. consciousness] is different from matter, for it cannot be delimited. (80)

Therefore, as the existence of the sun is proved, who will be so foolish to say: 'How is it possible that the whole earth is illumined by its own rays?' (81)

Therefore, as the light is proved, all deviating concepts are [like] following the behaviour of an [unfaithful] woman who has sexual relationships with everyone [although her husband is 'proved']. (82)

eryone [almough not wist, who would I be? Would you exist, would there be If the light did not exist, who would I be? Would you exist, would there be darkness or would nothing at all exist? Or how could it [even] be silent? (83) For this reason, time cannot bring about anything [i.e. any difference] even in objects, since they are part of Bhairava through their identification with light.

[Opp:] But how, for heaven's sake, can there be the use of words [denoting time] like 'then' etc. [in your account of reality]? (85ab)

[A:] Listen! Though this has been said [before], it is again stated in detail.

(85cd)

This same light appears in various ways; but never for anything else [i.e. it does not illuminate an independent object], for it alone shines. (86)

This [light], as it is absolutely superior (paramodārah), manifests everything. Because it is autonomous, its power of will is called 'autonomy'. (87)
And it rests in its own self, because nothing that is different from it can exist. ¹⁸ This 'resting in one's own self' is called bliss of God. (88)

The power of its autonomy lies in the fact that [even in the process of manifestation, which implies duality] it is never separate from its own nature. [For] it is in its own realm of self-light, that it causes the confusing beauty ¹⁹ of the world to appear. (89)

This activity of manifesting [objects] is called 'power of action' in the Sāstras. It is responsible for the self-differentiation (*kalanā*) [of light] into various *tatīvas* etc. How could this manifestation possibly take place in something unmanifested (*anavabhāte*)? Therefore the inner appearance of it is the 'power of knowledge', which is called 'I'. (90–91)

Up to this point the form of God, which rests in his own self alone, is called 'awakening' (*unmeşa*); therefore the pervading Lord has five powers. (92)

[For the purpose of worship] he [is described as having] three powers or one power, or [as being the one] God alone. Or (atha) there is power alone which is described in the $S\bar{a}ra\bar{s}\bar{a}stra$ as the Goddess, (93)

And Śiva will say [in the *Mālinītantra*, in a later passage] starting from '[this power] of the creator of the world is said [to be inherent in him]': 'She, being one, becomes many'. (94)

one, becomes many (1977)

And God (ayam), being perfectly established in himself through a state of rest in a bliss replete [with all things], is denoted by many (samdarbha) appropriate (sodarya) terms such as, for instance, "Bhairava". (95)

prate (sodar) of the first practice of the first practice of the group of Even if it is nearer [to him] or further away [from him], the group of words (\$abdajātam), or anything else, does not actually (vastutah) pertain to this omnipotent God (asya ...prabhoh). Thus this God manifests in various ways; therefore the whole process of conceptualization [can] only follow this [manifestation]. (96–97)

And [on the other hand] it is not merely conceptualization. Even if it were, [our doctrine] would not be impaired: God may form concepts in this way or he may cause others to do so. (98)

And in this way [Śiva], who is essentially light, is higher than the thirty-seventh [tattvam]. (99ab)

[It is only] by causing the appearance of diversity that the Lord manifests time. This manifestation of diversity is termed 'the power of time'. Thus it is because of our (āsmākīnāt) accordance (anurodhataḥ) with Śiva's (etat) power of time manifesting that qualifications ²⁰ [of time referred to by words] like 'then' etc. exist. (99cd–101ab)

It is not [the case], that [time] does not exist in [Śiva] at all, [for] how can anything exist except in him. It could spread in another reality [and] would still be dependent on light. (101cd–102ab)

[Opp:] If it were as you say, [it would follow that], since the pure Bhairava [would] exist in the lower impure (śuddhetara) group of tattvas, or in the group of tattvas that is intermediate between purity and impurity (śuddhāśuddha), [i.e.] impure knowledge and [the remaining kañcukas], there would be no difference [between them]. (102cd–103)

[A:] We dance out of joy now! What we would have had to explain laboriously, is already²¹ present in your mind.²² (104)

The distinction between pure and impure has no place in discussions of the highest reality. But caused by [the necessities of] those [discussions], it is entrenched in the mind of the ignorant. (105)

[Opp:] If [you say that] the division which is called 'purity and impurity' is unreal, then [it must be objected that] the very Śāstra you wish to explain contradicts this. (106)

Because here existence (*sthiti*) is predominantly dualistic, [as is] frequently [demonstrated] by such [teachings] as the impurity of the *tattvas* and therefore the purification through initiation. (107)

the purification through the purification and the purification and the purification are pletely absent from this non-duality, for it is taught that an appearance of duality pletely absent from the pervading Lord, although he is free from diversity. (108) takes place in the pervading Lord, although the is free from diversity.

This is indeed called bondage to the world [of transmigration] with words like māyā and ignorance. Those who are immersed in it are called 'transmigratory souls' (saṃsārin) [and] their firm belief (niścaya) in pure and impure and other [dichotomies] stem from anxiety about saṃsāra (tat). (109–110ab)

Moreover this Śāstra teaches the Yoga of Śiva (*bhagavad*) thoroughly (*samyag*). This Yoga of Śiva is said to be non-dualistic and beyond dichotomies. Instruction in this [Yoga] is given in this way: if [something] is imagined to have a certain amount (*yāvat*) of division, it is explained by analysing it again and again. (110cd–112ab)

For there is no practice (ābhyāsikī sthitih) for entering into and remaining in (upaveśa) the pervading Bhairava who is without duality, as both [entering and remaining] are completely dependent on duality. (112cd–113ab)

Therefore all the efforts made by teachers and disciples serve only to remove the inhibition (\hat{sanka}) caused by all the duality they imagine. It is for this reason that everything [taught] in [this Śāstra] (iha) is unfolded by supposing duality again and again. (113cd–114)

But (tu) by supposing it one's whole life (yāvadgati), one never becomes indifferent to it [as the Vedāntin attempts to become]. For if duality does not become conscious, absolute consciousness (cidbrahma) [remains] as the one existent. Then there would be no use for an enumeration, construction and determination of tattvas. Why should thirty-five tattvas [below Śiva] then be considered? (115–116)

Therefore having accepted (graham kṛṭvā) duality, which exists (sthitī) as division, all one's life, one should become free from inhibitions only (yas...tena) through rejecting it. (117)

And this [is taught] in the Vijñāna[-Bhairavatantra]: the instruction (*upade-sanam*) [that is given there] after piercing through [them] as far as possible is the crushing of [these] adamantine notions. (118)

For Bhatta Nārāyana has clarified this (tat) state beyond duality (nirdvaitam padam) [with the word] 'beyond dichotomies' in his hymn:

"I adore you, o Lord, who creates the erroneous perception for those who are deluded by the world [only in order to] destroy it 23 and [thereby] veils and unveils the bliss of knowledge which is beyond dichotomies." (119–120)

The word 'and' in "erroneous perceptions are created and [destroyed]" creates the [poetical sense of] wonder. (121ab)

And it will be explained later that in this system only non-duality exists. It will be said that the purification of the adhvan, for instance, is inexplicable in a dualistic system. (121cd-122ab)

[Opp:] [We can agree that the purification of the adhvan] is not [explicable] without non-duality, but is it [explicable] without duality? (122cd)

[A:] This is correct, but even duality is not impossible in the non-dual reality. For the supreme non-duality [is not the absence of duality, but] exists, when (yat) there is neither rejection nor acceptance of duality. (123)

But [in the sphere] of duality of all things, I think, the firmness of their own individual natures will automatically (rasāt) cause the word 'non-dual' to become something dual. (124)

But enough; we shall [now] expound the main topic: it has been said (kila) that as much as (yathā tathā) the highest Lord causes the construction of plurality to appear, indeed also time appears. (125)

But still he is never divided in the real sense. For, [as] he is consciousness, he simultaneously appears manifold [because of his autonomy²⁴]. (126)

[Opp:] If sentience (samvedana) exists in the way [described] as the essence of a homogeneous awareness of being (bhāva), then how [do you explain] that what I, who am manifold (citrah), 25 do or know, is not also done or even known more or less by all the others. (127)

[A:] Tight indeed is the knot of illusion on this point (atra) in you! For we teach this: in our system (iha) 'own' and 'other' do not exist; the one [reality] is undivided (?abhida). The fact that I perceive means that the characteristics that form a pot ²⁶ are manifest. As has been said [before,] various manifestations appear in the highest light. (128)

¹¹⁹cd-120ab = Stavacintāmaņi 71. 123b na na: nanu J₂. 124d bhedi 119a śrimatā: śrimatāh J₁. 124d rasāt (conj.): rasān K_{ed}, rasām J_Σ. 126a thāpi up to shiri (J1, GNOLL Tantrasāra, p. 41); kimtu dvaye Ked J2. For this reason [the perception] 'I perceive the pot' does not imply any duality. [Opp:] But in the perception 'The pot is manifest to me' duality appears, alt; It is not so (naitat). ²⁷ It does not [appear] to him, this Siva [appears] in this way. (129)

way. (129)
Therefore Dvaipāyana and others describe in various places (-deśeşu) in their own Śāstras the notion that something belongs to oneself as [equivalent to] death, for it produces division. (130)

to] death, for it produces at highest reality, cognitions (samvidah) that are caused In this way, even in the highest reality, cognitions (samvidah) that are caused under the influence of limiting adjuncts, which are the activity of time, appear as 'then' etc. (131)

as then electricity, because it is always replete, ²⁸ everything is also in everything. Otherwise this entirety would not be full, since division would be possible. (132)

Therefore, on account of its fullness in the all-sustaining light of Bhairava, the sense of the Śāstra [on the level] of Śiva (śāmbhava) is fivefold. By subordinating the level of power and soul, this [God] emphasizes the highest deity [of speech] in his own self. (133–134ab)

So it is that when he wishes to emit the objects [i.e. the world], before $(p\bar{u}rvam)$ [reaching] the condition, in which he creates, 29 he has [already] experienced a state in which the mass of bliss has been stirred (*ucchalita*). (134cd–135ab)

But in the state where he is a creator, when he is absorbed in the emission [of the world] and (api) is about to become emptied of the mass of bliss that is his full consciousness, he is $(vartam\bar{a}nah)$ completely $(t\bar{a}vat^{30})$ filled with intentness $(\bar{a}ve\delta a)$ to emit, which is part of his power of bliss; he was full of the mass of his own powers; and he will have exhausted his power. Thus (iti) the highest deity [Śiva] is manifest in his creative state as the sentience that is diversified threefold [i.e. into past, present and future]. (135cd–138ab)

[Opp:] But how can past and future exist together in an aspect of present time? Surely you understand that they are also independent entities ³¹ and [that] the past, as well as the future are divided from the present. ³² (138cd–139)

[A:] How can something be divided [from a place] where it does not rest? [A:] How can the present be a limit with regard to these two, or they have a And how can the present a limit with regard to these two, or they have a And now can are it [the present]? Would not everything become the limit of limit with regard this manner (tadvad) [i.e. if this were accepted]? (140–141) For this reason it is said (iti) that past and future are immersed in the con-

sciousness that is called present. If one brings about a state of rest in this only, and if the whole circle of rays of conceptualization stand still for one moment without becoming manifest in this [present consciousness], then one has anniwithout became individual (nija) existence and relishes (carvaṇām labhate) only the vibrant experience 33 [of the nectar] of one's own immortality [i.e. the transcendence of time], [in which] flows an abundance (samdoha) of ambrosia that is the highest bliss. (142-144)

For, to explain, when the moon is full of the mass of the rays of the sun and does not wish to emit them again, then it is, for a moment, established in a state of rest in the fullness of its own orb. It is [then] called 'vessel for the gratification of all the constituent deities inside [consciousness]'. (145-146)

In this way one rests in the light emitted by the moon of one's own knowledge, [a light] which exists inside the heart [i.e. consciousness], which is made manifest (añcita) by the mass of the rays of the sun that illuminates the world and which is beautiful with the essence of the nectar of the vast consciousness inside. Since the flood of one's own inner nectar is not released outside, it is revolving and surging up only inside and acquires (-ātmakah jāvate) the knowledge of the 'I', which gratifies the circle of deities inside oneself. As long as [it does this] (yāvat), the process of one's sensory perception (svakaranakramah) is suspended. (147–150ab)

While the mass of rays is restrained, [their] power (vibhava) [that causes manifestation] is absent, and consequently 34 neither past nor future is divided from the present. (150cd-151ab)

[But] how [can we speak of] the present, as long as they [past and future] are not divided from it? For it is through the nature of past and future that the present becomes separate. (151cd-152ab)

Therefore (tad) when a meditator (vogī) intent on devouring time comes to rest in this limit of consciousness for only a moment (tutih), he at once becomes "one who moves in the void [of consciousness]". (152cd-153ab)

34 This translates the ablative yogatah.

For it is taught that time, which is the appearance of the world, is (yah ... sa) the vibration (saṃsphāraḥ) of the rays of one's own consciousness that is prothe vibration (kalana) [the world]. The absence of the world is [also] it [i.e. time], it is jecting (kalana) [the world]. The absence of the world is [also] it [i.e. time], it is jecting (kalana) (the line), it is nothing else. Therefore one who has restrained all the [six] orders (adhvan) by nothing else. Therefore one who has restrained all the [six] orders (adhvan) by nothing else. Talk of his own [consciousness], who is completely immersed restraining the rays of his own [consciousness], who is completely immersed restraining the day in the devouring of time, spontaneously (svayam) becomes "one who moves in in the devouring of time, spontaneously (153cd, 155cb) the void [of consciousness]". (153cd-155ab)

ne void for commune void by Śiva (parameśa) in the Śrīdāmaratantra: 'After immobilizing one's circle of rays and tasting the supreme nectar he should dwell in bliss within the present that is not divided from both past and future.' (155cd-

Even the so-called restraint [of the rays] does not exist in this [present] 156) which is free from contraction. As this is absent, there is no vibration [of the raśmicakra] in it, and how could there be [subsequent] devouring and contentment. (157)

But in the manner described [above] restraint, appearance, devouring etc. appear. And there is no other reality in the world than appearance in this way.

But enough of this long narration of the [secret] discourse about the khecarīcakra; or what is its use (ko yogah) for the process of perception, which is hidden ever new [i.e. again and again]? (159)

So let us deal with our topic. When (yāvat) the manifold perceptions are emitted by the goddess, they form the stream that is higher than the "upper" [stream] and is free from duality. 35 From it Sastras like the Saurabhargasikhā are produced. (160-161ab)

And the supreme God teaches in the Bhargaśikhā: "O Beloved, this is the knowledge, that stems from the higher stream; that is the supreme [knowl-

With the word 'supreme', which expresses the form of consciousness above the higher stream, he taught that there is a difference between [this highest form of the Śāstra and] the Siddhānta, which issued from the Īśāna face. (161cd-163ab)

Even here, [when] the riches of knowledge become manifold by mingling with parts of earlier divisions, they produce an astonishing multitude of Sastras. 36 (163cd-164ab)

¹⁵⁴b bhāvābhāvah: bhāvābhāsah J₁. 155a grāsaikz 156c paricchinne: paricchino J2(the par-155d dāmarā: bhāmarā J2. 157c visphāro: visphāra J₂ allel in PTV, p. 35, reads samrudhya and -paricchinnam). 159c väbhi: 159a cakra: cakram J₁. 158c cănyad (conj. ³⁵ Lit.; "Then ($t\bar{a}vat$) this is the stream which is without duality."

^{36 &}quot;Astonishing multitude" tries to eatch both senses of vibhrama that are implied here.

iha vāvat tu mukhyeyam şadātmā śāstrasamtatih | 164|| etatpūrvārdhabhāgīni trikaśāstrāņi yāni tu | sadardhasamjňayā tāni gurubhir bhāṣitāny alam ||165|| na tu gudharahasyatvad evaisa vacanakramah | evam hi dvādaśārdhārdham ityādy api na kim bhavet | 166| atra šaktitravam mukhyam sampūrņasthiti kalpate | ananyonyoparodhena pūrņam pūrņacidātmakam | 167|| tatah param tu tritayam kasyāmcid gunitājusi | anvasvām gunatābhāji yāmalam paribhāsvate | 168| paścad visrste 'rthaughe tadvaicitryopadhiyogatah | prthagbhāvaviyogāsu svātmaśaktisu pañcasu | 169| citspandecchāvidākarmarūpāsu svaucitīvaśāt pañcabrahmāngasubhagāt sphuradbhāvāmśabodhajam | 170|| rūpam śāstrātmatām prāptam pañcadhaiva vijrmbhate tathā hi prāg anantāntahsthitabhāvaughajrmbhanam | 171|| vāvat karoti bhagavāms tāvad īśamukhasthitih | antahsthāvā abhinnāyāh kriyāśakter vijrmbhane | 172| kramād unmisite tāvān esa sphārah pratāyate krivāśakteh sphutah sphāro māyātvam pratipatsyate | 173| māvātattvasvarūpe hi śiveśānīti vaksyate | śuddhaśuddhetarāśuddhaviśvanirmāṇakārinah | 174| pañcamantratanoh śambhor nirmeyāśuddhasamgatih astv eva pūrvakotyām hi sarvam eva vyavasthitam | 175| tathā hi svagrhāt kvāpi yiyāsoh prathamaksane vāvat kimcana gantavyam yac ca tanmadhyavrtti tu | 176|

But here the primary transmission (santati) of the Śāstra is only (yāvat) six-But nere the File of the Trikasastras that form their earlier part are [therefore] adequately desfold. The Tital acquate of the foliation ignated half of she light ignated half of sh (vacanaxrama) be [other variants for Trika as] 'half of the half that case] why should there not be [other variants for Trika as] 'half of the half of twelve' in the same way? (164cd-166)

In this system a principal trinity of powers exists, which remains in fullness. As they do not obstruct each other, this [trinity] is replete, [that is,] its nature is replete consciousness. (167)

After [this state of equilibrium], when one [power] is superordinate and the other subordinate, this highest trinity is called 'paired' (yāmalam). (168)

Later, when the multitude of objects is created, the five powers of his own being (svātma), [i.e.] consciousness, vibration, will, knowledge and action, are separated (viyoga) because of their disparate activities (bhāva) under the influence of the diversity of these [objects] (tadvaicitrya). Because of its habituation (aucitf) to [these five powers] the form that stems from the awakening of the vibrant objects that constitute [the universe] 37 is beautiful with the five brahmaand [the five] anga[mantras], and therefore, on becoming the Śāstra, unfolds exactly fivefold. (169-171ab)

For when the Lord causes the endless flood of things that is inside [consciousness] to appear for the first time (prāk), he exists as the Īśāna-face. (171cd-172ab)

When the opening of the power of action that exists undivided inside has unfolded gradually, then only is this subtle (?tāvān38) vibration produced.

A distinct vibration of the power of action will [in the course of creation] become māyā. For she will be described in [the passage on] the nature of the māyātattvam as "beneficent" (śivā) and "able to act" (īśānī). (173cd-174ab)

For Sambhu, whose body consists of the five mantras, and who is the [direct] agent in the creation of the universe consisting of pure, intermediate (śuddhetara) and impure, is in contact (samgati) with the impure (aśuddham) in the objects he wants to create; for everything is contained in the first moment. (174cd-175)

For instance when someone wishes to leave his house for a certain place, he [will] to some extent (kim cana) [know?] in the first moment how far he has to go and what lies in between. (176)

¹⁶⁸b gunită (conj. For this reason those who possess unswerving (niskampa) skill in [noting] minute details "attain, even in one moment, omniscience and universal power to act." (177)

For the mind [can be] compared to the touch by the cutting edge of an excellent sword. It draws out (?) minute details in the moment of their appearance.

(1/8)
One who has well-developed knowledge about jewels, ³⁹ discerns the various (178) details of - even many - jewels, if they are seen for [not more] than the duration of a flash of lightning. (179)

An expert recognizes the variety in the [scale that makes up the figure] ekavistāra [played] on a Vīṇā, [even if] composed of a rapid articulation (sparśalāghava) of a great number of notes. (180)

One whose sense of hearing has reached the highest limit through rigorous training knows even the pitch of the sub-intervals (śruti) in the notes [i.e. that define the notes]. (181)

May this be enough! In this doctrine of non-duality this (etad) is established without effort: even where duality appears, the reality is non-dual. (182)

Even in a system which rests entirely on duality [like Yoga] this is clearly established. Patañjali, for instance, states in the chapter with the name "magic power" that "everything is also [known] by intuitive [knowledge]". And it is also [stated] by me in this work (atra) that in the first opening of intuition, which is consciousness [itself] and undivided, there is (sthita) an appearance (udaya) of the fruits of all perfections in the form of a vibrant emergence (sphuratta) of

In this way an aspect (dalam) which is impure as well as equipped with a great variety that is identical with consciousness (tadrūpa) and is necessarily (balāt) included (svīkrtam) [already] in the desire to create the world yet to be created [i.e. before it is actually created] 40 remains expanded (pronmisita) [in consciousness] and beautified by its duality in a general form; this mode of existence is one of duality-cum-nonduality. (185cd-187ab)

For this reason, the mode of existence in the sādākhya [=sadāśivatattva], [as its⁴¹] nature is the power of knowledge, is the intermediate [higher-cum-lower] (parāparā), because it is stained by a slight trace of impurity. (187cd-188ab)

And therefore (tena) a manifold deliberation (mantranam), which is full of the intention to act in many ways and is beneficent (śivapradam) because of the continuity of the great knowledge, arises from this desire to make māyā manifest. [This desire] experienced by the Lord (īśabhuktāt) is [still] part of the manifest. [This desire] experienced by the Lord (īśabhuktāt) is [still] part of the higher stage (ūrdhvapada) and bears its imprint (sanṣkāra). (188cd—190ab) For there the lower state disappears in the higher state, but one should not be-

For there the lower state disappears in the higher state, but one should not become established as if [one's] religious practise (vidhi) [were] beyond the impure [order of the universe]. (190cd–191ab)

For this reason those who are fixed in other doctrines [namely those taught by] Viṣṇu, Buddha etc. are not liberated completely. It is different with those who are initiated into the doctrine of Siva. Now (tu) for those who are completely initiated into the Śāstra [taught by] the highest Śiva, into streams other than those of the atimārga, the Krama, the Kula, and Trika etc., there is no division whatsoever as soon as they attain final liberation. And [for them] there is no other way to liberation than this. (191cd–194ab)

Only sometimes (*kvāpi*) the highest perfection [comes about] quickly, without effort and through liberation in life as taught (*iti*) in our systems. (194cd–195ab)

Sometimes the highest fruit is reached after a long time through a gradual course of unification with a series of reality levels (*tattva*) and through many various rituals. (195cd–196ab)

Therefore the Kaula perspective is valid in this world (*iha*) even for those whose doctrine is dissolution [i.e. the adherents of the Siddhānta]. For it is said for instance in the Kālapāda that "one should initiate outcasts" [and thereby transcend the rules of purity]. (196cd–197ab)

The same five [powers, i.e.] "the opening of consciousness" etc., which have – because of their prior undividedness – been described above as [existing] in Bhairava, the highest Lord of consciousness, [these powers] are, because of their inherence [in Bhairava], clearly manifested (*vibhāvitāḥ*) through the division they have obtained by virtue of the aspect of limitation superimposed (*upādhi*) by the world, – although they are in complete (*alam*) possession (-juṣo) of their prior non-duality. (197cd–199ab)

For the same consumption of boiled rice that [usually] builds up the body, emaciates it when the mass of phlegm is reduced. (199cd–200ab)

[Opp:] But since God does not deviate from himself [i.e. does not undergo any change] even when world and self are undivided, how can limitations – which are appropriate only for things liable to change – have any scope [with regard to his powers]? (200cd–201ab)

[A:] We do not even have to consider 42 the idea (iti) that [only] because the world can exist in Bhairava, limitations through objects (tad) cause division. For it is brazen (atisāhasam) to say that changing objects [could] be silent [in Śival. (201cd-202)

[According to our doctrine] it is this God who is the self of the world [, because he] appears in this form. He, who is without limitations and undivided, causes 43 the manifestation of limitations as different [from him]. (203)

[Opp:] If this is so, then this [appearance of limitations] will be unreal; how can it be real [at the same time]?⁴⁴ [A:] Nowhere has anything else than the appearance [of God] in this form been described as real. 45 (204)

[Opp:] If it were so, why would the world of dreams be real [on one hand]. but on the other hand (param) be said to be unreal, as it is considered (kila) incapable of producing a desired effect. [A:] This will be set forth with arguments and in detail later. (205-206ab)

Therefore the power of unmeşa [=cid], which was not divided [from the other powers] before, attains the state of Tatpurusa by becoming the awakening 46 of the world. (206cd-207ab)

That which is undivided is imperceptible; that which perceives, [namely] the īśyara[tattva], exists now as perceptible, because of the division. Its perceiver is called purusa because of this division (bhidah). And it is called primary face, because it is connected to the beginning of creation [and] because it is clearly recognizable. (207cd-209ab)

Therefore diverse ailments, seizure by planets (graha), violent death (samghāta), poison etc. are described here as an obstacle to the continuance of the state of expansion. (209cd-210ab)

Once their ailments have been destroyed by various means and they are settled (samśānta) and firmly (su-) established in existence, the objects become clearly perceptible as [entities] that exist only in division. The whole nature of existence is this first-born face. (210cd-211)

Because [his] qualities are superior in every respect, the upper face is that of Īsāna, For in him, who is free from the action (kalanā) of direction and time, no concepts of spatial divisions exist. And [as is taught in MVT 2.60] "he who has superior qualities than someone else" will be higher. (212-213ab)

When therefore [God] through the power of his will truly wishes the objects, they become grounded in his will, yet the will [remains] unstained [by them]. ⁴⁷ For they are in contact (*spṛṣanti*) with the unity of consciousness by being identical with it. (213cd–214)

The objects, however, are then hidden by the will that is affected by limitations as a cover. But God remains in his own will. (215)

This face [of God], which is consciousness, [but] is turned away [from the light], is not occupying the highest, replete state and therefore appears to be in deep sleep. (216)

And as he is awakened, he is [in fact] not sleeping. His sleep is the disappearance [of all things] (nimīlanam), for in reality there is no [sleep] for the consciousness that is the bliss of Bhairava. (217)

If there would be an [actual] disappearance of the highest light, then a knowledge of this disappearance would be impossible because of the dissolution. (218)

And something that does not appear, is not a reality (*vastu*), like a window in a castle in the air. Or this [window] would appear [as an] imagined form in the light of consciousness. (219)

Therefore he only appears to be sleeping, although not at all asleep, for the power of mighty ones who achieve difficult [goals] is incomprehensible. (220) "This is easy to accomplish, that is difficult." – [Thus] he [alone] is com-

pletely free to bring about diversity of appearance for us. (221)

Thus his autonomy is the power that is called determinacy (*niyati*). It obstructs the soul so that it can never be autonomous. (222)

With regard to this it is said that the [ability] to perform difficult things lies within the Lord, since for him, who is the self of the world, there is nothing easy or difficult. (223)

[Opp:] Why this [statement] again and again. Surely you have explained it many times. (224ab)

[A:] Oh! For someone like you, who is not prone to forgetfulness, this may be unnecessary, but the effort [of teaching] this [doctrine] will not excel if directed to only one. Do autumnal clouds [rain] only for the sprouting of a single shoot? (224cd-225)

This is a crucial point [of our system] and people should be made proficient in it. If their heart [i.e. consciousness] is ploughed like soil by the mass of karma, it becomes very soft and is therefore strewn with plantains (kandala), whose sprouts are the endless concepts stemming from the seed of $m\bar{a}y\bar{a}$. [These plantains] are haunted by the habit of expression that is caused by the wrong notion of dividedness. (226–227)

of dividedness. (220 As long as this [ground of consciousness] is not destroyed again and again by knowledge, like [soil is destroyed] by a massive forest conflagration, duality grows again and again for him. (228)

When duality is destroyed by sharp reasoning, just like a tree is cut by sharp axes, [a reasoning] which is tempered by real knowledge like the axes are tempered by fire, it does not grow again. (229)

Thus when God remains inside the aspect [of his nature] that is deep sleep, the objects, although existent, become virtually non-existent, like a *kapittha*tree in the netherworld. (230)

Because of this separation (vibhāgatah) only such [an aspect] of his knowledge that is full of indifference [and] without designation or foundation unfolded [into the Śāstras] in this [western face of Śiva]. (231)

Those who live in burning grounds and wear garlands of human skulls for decoration and whose sphere is that of the assemblage of spirits are turned away from us. (232)

Every enjoyment ends in disgust for the "I" experiences, the body is nothing 48 but skin and bones, never is there an essence in it, not even in the smallest part. (233)

By constant practice in this manner they attain to the highest perfection of detachment in every moment and close their eyes [i.e. die] annihilated through it [i.e. detachment]. (234)

"What is this", in this way the sense activities flow forth even in pain. "It is so", in this way they generally become detached even from the pleasant. (235)

And also [in the Yogasūtras]: "One, whose mind is in control when he is detached from all desires for the flood of seen [i.e. worldly] and heard [in scripture as a reward for following it] objects, [experiences] the detachment from the gunas [only] afterwards through the knowledge of the soul." (236)

[Opp:] We would like to ask something unexpectedly, if you permit: ... [237cd unintelligible]. (237)

[237cd unintering].

In this case, if it is true that this consciousness is pure by its very nature, then how is it possible that it has this extreme desire for impure enjoyments spontaneously (rasāt)? (238)

neously (radii)

[A:] Where has your pride in not forgetting [what was taught before] gone now? Or [rather] enough of those [objections everyone's] intelligence must revile! Although I have taught it before, I shall teach again: (239)

By its very nature consciousness, which is ultimately light, shines as (yogena) the appearance of the world. This has been stated in great detail. (240)

How could therefore the fact that the goddess who is consciousness appears (ucchalat) in the whole sphere of the world only in her own self become a cause for division? (241)

It is described (*vivicyate*) [in this way] that every time the power of the Lord causes the manifestation of duality, consciousness flows into objects. (242)

Just as a lump of earth, a lake, a flame, breath and the space inside a pot become [respectively] earth [itself], the ocean, the great fire, air and endless space, [in the same way] consciousness as knowledge (miti), being projected from itself (svocchalitā), gradually follows the objects that are congruent to this form of consciousness. (243–244)

This has been explained by the indescribable Lord in the following way: "Who is able to cause water to flow out from a tank if [its level] is low? If [the tank] is, however, [over]full, streams [flow out] in all directions." (245–246ab)

[Opp:] But does consciousness ($s\bar{a}$), through the force of its own determination (niyati), thus flow into certain [objects] only? [If it does so,] then its form is that of the tattva 'desire' ($r\bar{a}ga$). (246cd–247ab)

[A:] [I concede that] it may bear an appearance of $r\bar{a}ga$ in this manner. There may be some kind of $r\bar{a}ga$ in the conscious self, in the form of being coloured by another. (247cd–248ab)

[Opp:] If this is the case, then how could consciousness ever become detached from something? (248cd)

[A:] Ah, we have come back to the main topic of our discussion. For when the power of consciousness (citi) has become completely contracted, it gradually becomes emptied $(s\bar{u}ny\bar{a})$ of the means of experience, the objects of experience, the experiencing (bhujah) body, from experience [itself] and $(tath\bar{a})$ the subject of experience, as if entering the great dissolution [at the end of the universe], for the state of destruction which is [thus] produced is that of Rudra. (249-251ab)

sadyojātaš ca yad rudrah puruṣaš ceśvarātmakah ||251|| śrīmān sadāśivo deva īśānaś ceti gīyate visnur vāmah kajy aghora iti caitad bhaviṣyati ||252|| antahsthasarvaśaktitvenaikaikasyāpi bṛṃhanāt brahmāny etāni kathyante brhattvād viśvabrmhanāt ||253|| tadanyaśaktyudrekāmśe hy ata eva vivaksite | pratyekam asti brahmādihetupañcakayogitā ||254|| saiva śāstresu bhedena tesu tesu pratanyate ataś ca sadyojāte 'smin mukhyā raudradaśā sthitā ||255|| sā ca samkocarūpāpi cidvikāse bhavisyati | vallīnau brahmavisņvamšau tenādhahkurute balāt ||256|| vastvabhāvamayītyādidaśā rudrādhidevatā | bhinnaprameveti śrīmadutpalena nyarūpyata ||257|| iāto 'pi bhedatanmātre samkocam yad upāgatah tato vyatinimīlete bhoktrbhogyāv iha sphutam ||258|| ajātam iva tad viśvam atra sadyo 'vabhāsate | sadvojātapadam tena śūnyasamvedanātmakam ||259|| tatah śūnyapadasyāntar yāvat sa ca viviksati | devas tāvat svayam bodhe viśvam procchalati sthitam |260| jānāti seyam nāthasya jñānaśaktir vikāsinī | tavor vikāsiciddhāmni līnatvam upapāditam ||261|| samvidah śūnyarūpāyā vikāso viśvam eva tat tathā hi ghanasausuptaviśrāntivaśanirbharah | 262 | tāms tān grhāpanādyamśān vetti svapnapadābhidhān ata eva na sā srstih sthitir eva tu sā tathā | 263 | pūrvasīstesu bhāvesu tad dhi vijnānamātrakam tathā ca jāgrato rūpāt svapno bhedena jāyate | 264 | kimtu jägratpadädīnām pratyekam bahubhedatā nirnesyate tato yuktam srstirūpena bhāsanam ||265||

For Sadyojāta is Rudra, Tatpuruṣa is Īśvara and the holy Sadāśiva is called Jśāna. Vāmadeva is Viṣṇu, and Aghora is Brahmā. This will be [taught later].

(251cd-252)
As they are internally of the nature of all the powers, they nourish each of them. Therefore they are called *brahman*, [and] because of their magnitude and their nourishing [of] the universe. (253)

their nourishing [01] the theorem wishes to express the aspect of predominance (udre-When [Siva] therefore wishes to express the aspect of predominance (udre- $k\bar{a}\eta_1 sa)$ of one of these (tadanya) powers, each [power] is connected with [one of the] five causes, i.e. Brahmā etc. This [connection] is described in different scriptures in detail. (254–255ab)

And therefore the state of Rudra is dominant in this [face of] Sadyojāta. This state, although contraction by nature, will exist in the expansion of consciousness; [it is a state] in which the aspects of Brahmā and Viṣṇu are latent; he therefore (tena) subdues them forcefully. (255cd–256)

Rudra is the presiding deity of the state of absence of objects etc. The holy Utpala[deva] taught [this] with the words "[Brahmā and Viṣṇu reside in the flow of] differentiated objects of perception" etc. (257)

When he, although he is 'born' (*jāta*) into subtle duality, contracts, the subject and object of experience certainly disappear in him (*iha*). In this state the universe [then] suddenly (*sadyo*-) seems to be unborn (*ajāta*). Therefore the state of Sadyojāta is one in which emptiness is experienced. (258–259)

Therefore, when God wishes to enter into the state of void, he himself knows everything that exists, as soon as knowledge manifests (bodhe ...procchalati): that is the Lord's unfolding power of knowledge. (260–261ab)

The universe is [thus] dissolved into the light of consciousness that unfolds in these two (tayor) [the subject and object of experience]; this is (tat) the unfolding of the consciousness that is empty. (261cd–262ab)

For, to explain, one who is completely overcome ⁴⁹ by the rest [experienced in] deep sleep, perceives different elements like for instance a house or a market, which are designated by the word "dream". (262cd–263ab)

Therefore this is not creation, but merely continuance in the same way (tathā). For it is only a knowledge of things created earlier [in the waking state]. And in this way the state of dream is produced from the form of the waking state by division. (263cd–264)

But it will be described later that each of the states of waking etc. has many subdivisions, and it is therefore appropriate [for them] to appear as creation. (265)

Thereafter the pervading Lord fills the objects with his own knowledge and causes them to give up their state of indifference [by] pervading them [?]. (266) causes them to give up the power of knowledge. The objects, which become This is the opening of the power of knowledge. The objects, which become the continuance of this knowledge, attain to fullness when their splendour unthe continuance of this knowledge.

folds. (267)
The highest degree of contraction certainly exists in the state of Sadyojāta, for [in it] the nature of those things never reaches steadiness. (268)

for [in 1] the hather for how can there be any [limited] existence like being and non-being, material and immaterial [things], non-blue and blue etc. without rising into consciousness? (269)

For this is what the teacher Utpala said: it is proven that there is no difference between the natures of existent and non-existent as well as (*tathā*) between material and immaterial [things]. (270)

Therefore this God is called Vāma, because he emits his power of knowledge (bodha), [first] by emitting into all directions the animating consciousness (cidanuprāṇanām) that is beautified by bliss and has created the state of own and other by the appearance of its mass of knowledge, [then] by the desire to appropriate everything into his conscious self through the nature of consciousness alone. (271–272)

But even when he, through the increase of his own power of knowledge, bestows his nature on the objects, he, although in reality wishing to appropriate them, brings about the destruction of their differentiation (*bhidah*). Therefore this God is crooked (*vāma*) with respect to the continuance of division. (273–274)

In this [stream] the knowledge that is produced is accordingly (tādrg)⁵¹ one, from which beauty streams out. What we call beauty is [in fact] the appropriation of differentiated objects and manifold elements of experience through one's own power. For (yataḥ) the power of consciousness (citi), which appears through the light of the power (kalā) of its own desire, affects everything by its natural passion. For [through being] manifest he will affect everything and manifestation is due to his nature. (275–277)

If one's mind is devoted to nothing else, one remains for a moment in the utmost essence of the rays of this state of manifestation, [a state] which is the emergence of a massive desire to appropriate.⁵² (278)

What does he who knows [this] Yoga not attract, and what does he not create by imagination? Therefore it is taught in the Sastra that one should be desirous to create desire in others. (279)

to create desire, in the centre of desire, or opened by the hook of desire, one shall obtain by desire. Willingly (kāmam) one shall unite desires with desires. (280)

desires. (2007)
Desire is the wish to appropriate. With [desire] as a cover the desirous attains everything, for this [world] is the reality of desire. (281)

everyning, to everyning, to the world (viśvam), which is subject to the control 53 of desire, having suddenly acquired stability in the highest self, appears as a 'slave', as it is gradually covered by the power (kalā) of knowledge that appears from it [i.e. the self]. (282–283ab)

For (yatah) through this method, which is proved by individual [experience], the life force – as soon as it arises – pervades the subtle body and attracts everything through the manifestation of reality, [i.e.] the reality of desire. If anything is to be kept secret in the circles of Siddhas, it is this. ⁵⁴ (283cd–285ab)

After emerging from the blissful emptiness God appears (*procchalitātma-kaḥ*) as present (*vartamānaḥ*) and becomes active merely by unfolding his own powers. (285cd–286ab)

That in which he wishes to enter, from which the pervading Lord brought all powers into existence, is that state which increases in itself. Therefore God, who is consciousness, appears as if subordinated, but these [powers, i.e.] with a consciousness, appears as if subordinated, but these [powers, i.e.] with a consciousness, appears as a constitution (icchā), cognition (vidī) and action (kriyā) appear as active [and therefore dominating]. (286cd–288ab)

For this reason, though [Siva] manifests himself as joined with [these] four powers [i.e. as Tumburu], how can one really count them. (288cd–289ab)

Since the power to uproot the aspect of division from existence lies in the [Aghora face], this practice [of religion] has its scope in super-mundane reality. Because of the diversity of endless powers, the various ritual acts [proper to this *srotas*], like the expulsion [of an enemy] etc., acts which are mainly [a form] of the playful destruction, persist even there. (289cd–291ab)

²⁷⁹b ca (conj.); na K_{ed} J₂. 279d All sources, including K_{ed}, read a tathā after it as introducing the next verse as a quotation. 280b kṛtam: vatam J₁. 281a kāmāḥ lāmā J₁. kāmam K_{ed}. 282b sthairyam: sthaivam J₂. 282d sampchādama; sampchādam J₂. 285b kimkara kimvara J₂. 283d anayaiva: enayaiva J₁. 284a prāṇaḥ (conj.); pidu J₂ K_{ed}. 285d devah J₁; bodhah K_{ed}, doṣah J₂ K. 286c praviviksā: pravivital J₂ K. 287a sarvāh; sarvā J₃. 287a bhāvaḥ (conj.); bhāvāstāh J₁, bhāstāh J₂ K_{ed}. 287b uānsyā J₃. 287c devo: deva J₂. 288b vidi: vidhi J₂ K. 288c yūst praviba J₃. 289a sathāpi; tathā hi J₃. 290a sthitas: sthitās J₃.

Thus, when objects exist in this way in a form⁵⁵ that extends up to the end of the power of knowledge, the power of action, being the final end [of manifestation], then (atha) absorbs them carefully. (291cd–292ab)

festation], then (aind) absolute formula appears in the highest state Just like the subtlest power called unneşa appears in the highest state (parāvadhau) as if in a gross form due to the grossness of objects to be created, similarly (tathaiva) this extraordinary ($k\bar{a}pi$) power of action, into which objects are resorbed, appears as established in its own nature as if replete. (292cd–294ab)

[Opp:] Is it not the case that there is action, in which difference appears?
[A:] It is not so. On the contrary every action denies previous differentiation.
(294cd-295ab)

For in the realm of difference [disparate objects like] firewood, fire and rice grains carefully give up their diversity, once they become part of the process of cooking. (295cd–296ab)

If they were different by nature, how could they become one in [the process of] cooking? For parts [of a process] cannot logically have different natures. (296cd–297ab)

[Opp:] But there is nothing [independent] that is 'cooking.' The various (yat tat) [actions] of different nature like lighting the flames, moisturing, heating etc. [together] are called cooking. (297cd–298ab)

[A:] All the different actions [involved in cooking] exist for the sake of this single purpose, which is called 'cooking'. There is no other action whatsoever [that is involved in the process and which is not covered by "cooking".] (298ed–299ab)

[Opp:] How is this possible? How should many [actions] produce [only] one desired result? [A:] For the same reason. (299cd–300ab)

[Opp:] But [the parts in the process of perception, i.e.] the faculty of sight, light, the object and the mental perception [also] produce only a single knowledge [without becoming one]; the same should be true in this case. (300cd–301ab)

[A:] You [behave like] someone, whose body is stained by contact with mud, and runs to the desert to wash himself with the waters of a mirage. (301cd–302ab)

If it is possible that a single reality [like perception] is caused by something which is divided, then the division in the cause does not entail an ultimately real duality. (302cd–303ab)

If (atha) it is accepted that one thing can have different natures, then the vow that a difference in nature leads to division should be given up. (303cd–304ab) [Opp:] If this is so, action would not be one, [but] the causal factors, [i.e.]

[Opp:] If this is so, action to the effect. [A:] Even this might be the case. It wood etc., would produce the effect. [A:] Even this might be the case. It does not undermine our position, for action is for us not different [from the causal factors], as it is power, and power becomes ⁵⁶ an object by producing a differentiation (*bhid*) of effects without being [itself] divided (*avibhedataḥ*). And power belongs to the all-pervading God who has the universe as his body. (304cd–306)

In reality [power] is not divided by the division of causal factors and effects, because the all-pervading God, despite being undivided in himself, causes division to appear in this way. [The power] is taught to be the power of action, [a power] through which Maheśvara becomes an agent. (307–308ab)

[Opp:] But how can we account for that which bound souls would produce? For they, being completely dependent on division, can cause only differentiated action. (308cd–309ab)

[A:] Enough of that! Your argument [i.e. the enquiry into] 'how the souls would produce' is clearly (*sphutam*) self-contradictory, like, for instance, "the son of a barren woman." (309cd–310ab)

For nowhere and never is it possible for the potter [in the well-known example for creation] to become the agent [of the pot] unless he is indistinguishable from the [real] agent called Maheśa [i.e. Śiva]. (310cd–311ab)

[Opp:] But in what sense ⁵⁷ is the pot made also by the potter? Given the fact that God is the universal agent, is he not the agent [in the production] of a cloth as well. If this is correct, would it not then be true that the cloth too is produced by the potter. (311cd–312)

If this is correct, there would be no other agent [than God]. As a consequence (iti), there would be no one for whom good and bad actions could be the cause for a [future] fruition. 58 (313)

[A:] You are right, Sir! For you should know that there is never any effect, which is produced by good or bad [actions]. (314)

But those who do not understand it in this way experience [the effects] without [ever] realizing this. For what is called *karma* is [actually] an impurity (*mala*), which has ignorance as its source. (315)

⁵⁸ Lit: "With regard to whom (kam prati) would good and bad actions be the cause for the production (kartum) of their fruit?"

etad evānumanyaiva kecit samvittimātrakam | sammanyante hy akartāram kartrtvānupapattitah ||316|| citsvarūpādhikam hy asya yat tat kartrtvam ucyate taj jādyam arpayed asmai cidādhikyaprasangatah ||317|| prakrteh kartrtā pumsi nanu nāmopacaryate etan nyāyapathāpetair vṛthā jegīyate gṛhe ||318|| upacāro hi no vastutathātvam pratipadyate | vyapadeśah param tādrg vastuśūnyo 'stu tāvatā ||319|| nopacārikavahnitvavyapadeśe 'pi mānavah | himānīsīkarāsārivātotthasisirāpahah | 320| drastuh pumsaś ca na drastrī prakrtih parigīyate na cānyo 'sti varāko 'tah kartrbhāvopacārakah | 321 || kim ca prayojanam tasya kartṛtvavyavahārajam vyapadeśas tu nāvastu parivartayitum ksamah ||322|| ye 'py ātmānam nayavidah kartāram samupāgaman te 'pi praśnam imam tāvad asmākam pratibhārpitam ||323|| kim yādrglokasamsiddhakartrtvam karmayogatah | spandātma tad vibhau spandahīne samupapadyate ||324|| nanu jñānam cikīrsā ca yatnaś ceti gunatrayam | samavaiti yad atrāsya tat kartrtvam udāhrtam ||325|| ittham bālamatīnām dhīr vipralabhyeta vañcakaih dārakā api vā vidyur na samvedanavarjitāh ||326|| tatra jñānam na kartrtvam sarvatrāsty eva tad yatah | icchāyatnāv api prāyah saṃstah sarvasya sarvatah ||327|| kumbhakāro grhābhāvaparitāpitacetanah jānann icchan sayatno 'pi kim kuryān nātmano grham ||328|| nanu kartum na jānāti tatah kartum na cecchati | tasmāt kartum na yatate tad grham kurutām katham | 329|

Some accept this [but] maintain that something which is only consciousness cannot be an agent, because it is not proven that its nature is that of an agent. [They] say that the 'nature of the agent' is something that is more than [just] the nature of consciousness. (316–317ab)

Then, as a consequence of being more than [i.e. different from] consciousness, [the nature of the agent] should receive [the attribute] of being material, [Opp:] Is perhaps (nāma) the nature of an agent [that actually] pertains to prakṛti metaphorically used for the individual self? (317cd–318ab)

[A:] This [doctrine] which is obstinately asserted by those in [their] house[s] who have swerved from the path of logic, is nonsense, because a metaphorical [attribution of a quality] cannot become the reality of a thing; such a [metaphoric] representation is entirely (param) bare of the [denoted] reality. For this reason ($t\bar{a}vat\bar{a}$) a person cannot remove the coldness caused by the wind in a snow shower, even if it is metaphorically called fiery. (318cd–320)

And it is not taught that the *puruṣa* as a perceiver has a perceiving *prakṛti* [as his active counterpart]. There is no other [reality] below him (*varāko 'taḥ*) that could have the nature of an agent metaphorically. (321)

Furthermore the use of the [word purusa] stems from [the necessity] of talking about agent-ship. But a name is not capable to transform a non-existent thing [into something existent]. (322)

Even those philosophers, who hold the self to be the actor, [...]. (323)

[Opp:] Is the nature of the agent as it is known in the world due [only] to its action? [A:] Then (tad) it follows that [the nature of the agent], which is a form of activity, exists in an inactive pervading God. [Opp:] Is it the fact that (yad) the three qualities 'knowledge', 'desire to act' and 'effort' inhere in the self (atra) that is called 'nature of an agent.' (324–325)

[A:] In this way the intellect of ignorant persons is led astray by deceivers, nor will children, who are without self-reflection, understand it. (326)

In [your argument] knowledge is not the nature of the agent, because it exists everywhere, and also desire and effort [to act] coexist probably (*prāyaḥ*)

A part of the agent, because it exercises everywhere for everyone. (327)

A potter who suffers in his thoughts from having no house – would he not build his own house, if he knew [how to do it], wished and tried it? (328)

[Opp:] But [being a potter] he does not know how to do it, and therefore does not wish to do it, and for this reason makes no effort. This is why he does not build a house. ⁵⁹ (329)

[A:] [Then] the inflected verbal form ($r\bar{u}pam$) 'to do' is [no more than] an attribute of knowing etc. What is then the sense of the word 'he does'? If it meant "being equipped with subtle activity (spanda) [of knowledge]", the sentence should be: 'he knows and desires to be active'; but this activity (spanditam) is not in one's individual self, because it originates from [God's omnipresent] might. (330–331)

And a different knowledge [namely one] without activity is impossible even for Siva. Being equipped with knowledge, will and effort is taught to be the instrument for the self (atmandi). Therefore, when determining the sense of "doing", the sense of each of [the following statements:] "one knows, [one is] wishing, one makes an effort, knowing, to make an effort, to strive," is explained as "he knows to act". And this means "being one who wishes to act", but not [what we call] the nature of the agent. (332–334)

[Opp:] If it is as you say, there should be equality of verbal and bodily acts with mental [acts], how else could one become an agent through verbal and bodily acts. (335)

[A:] How is it possible to say that mental acts belong to him? One might argue (cen nanu) that since these three qualities really exist, there will be a collection of mental, verbal and bodily acts, and he should therefore be the possessor (bhāgī) of his karma. But this would amount to a metaphorical usage, which has been described as insubstantial. (336–337)

Furthermore, if it is said that they exist [only] when individual (ātmaga) qualities, starting from the nature of the intellect (mahat) and ending with substance, are present (samnidhau [sati]), would this [self] be the locus of the nature of the agent? (338)

And one has to accept that it is not so, for [otherwise] this would be true even in the state of liberation, because this rule would equally apply to the presence of qualities of another self. Therefore an appearance (āgama) of deeds which had not been done or which had already been destroyed (kṛtanāśa) would occur in every self. (339–340ab)

Furthermore, if the causation (nimittatvam) of an act, which is characterized (adhika) by a combination [of causes], which is filled by its individual (svaih svaih) constituent causes, i.e. inherent and other, and which depends on [someone] possessed of understanding in every respect (sarvatra), is done by God, then which part can be caused by the potter etc? 60 (340cd–342ab)

For there exists not even a small part, in regard to which there is not knowledge, desire and effort in the universal agent [i.e. God], and it is also taught (iti) that the nature of the agent is nothing else than this. (342cd–343ab)

It is therefore not possible that anyone else becomes an agent except for God.

It is therefore not possible that anyone else becomes an agent except for God.

It is the freedom of God that is known as the nature of the agent. (343cd–344ab)

So [things being] thus, actions are not capable of creating bondage by their very nature, even if there were a multitude of highest Gods or a multitude of selves. (344cd–345ab)

Therefore, [whether] this good or bad [result] is derived from him [God] or [indirectly] from *karma*, it is [still] the sovereign power exercised by God. (345cd–346ab)

As I have expounded this elsewhere in great detail, this [much] is enough; I shall now explain the main topic: the higher [i.e. divine] (parā) power of action is for this reason taught to belong to God in the form of Aghora. (346cd–347)

As (yatah) the kindness (/southernness) of this [power] is therefore in the auspicious (śiva) residence of objects, this line [of argumentation], namely that action does not belong to the self (ātmikā), is correct. (348)

[Opp:] But are there no objects [or: beings], which, by resorting to the nature of Śiva, become agents? [A:] True. But [this] you have to understand and regard in the following way. (349)

The God of gods [Siva] is out of reach of the [dualistic] notions of space, time, action and form and so is his power, who is the nature of the universe. (350)

But this universe, which is free from [even] the smallest stain of activity from time etc. and exists undifferentiated from Bhairava, [...] (351)

As the universe (tat) appears independent because of Bhairava's autonomy (tatsvātantryāt), and as surging up in itself, it even appears outside (bahiṣkṛtam) through rejecting entry into Śiva. (352)

For this reason the "higher power" is favourable and not terrifying(/of the nature of the southern Aghora). For it will be taught [in the MVT that] "the higher powers [i.e. those belonging to the goddess Parā] are called 'not frightening' by those who know, because they grant the fruit of the light of Śiva among beings, 61 (353–354ab)

And also in another text: "Śiva's power of action binds the soul when residing in it, [but] when it is known [as] standing in it's own way, bestows perfection." (354cd-355ab)

The emanation [of the letters of the Sanskrit alphabet], which is taught to The emanded with ha, becomes indistinct by resting in the bindu [=m]. start with a and [=m].
This opening of the power of action, which has all letters as its garland, exists This opening (iii) as the articulation of the sound a-ha-m ["I"] when embracing [the whole series]. (355cd-357c)

When (yāvad) [the emanation of sound] subsequently (tatah) appears (ullasitah) as equipped with an appearance of the highest replete [consciousness of] "I", as devouring all souls from Ananta to Brahmā, as ingesting 62 the multitude of worlds [full of] moving and unmoving beings, and as devouring the group of individual souls in the awareness (vimarśa) of its own consciousness, then (tāvat) [the powers that are] the lustres of Bhairava appropriately (aucityād) become manifold due to the nature of the power of action that has become adorned (carcita) by a diversity which cannot be perceived [completely and is therefore] innumerable, [that has] differentiated itself (-bhidātmanah) into mild and fierce [aspects] because of an endless number of [ritual] actions, like pacifying etc... and whose perfect presence (susthiteh) is displayed by the quantity of [the objects that form] her food. (357cd-361)

These powers [that are the lustres of Bhairava] are variegated by repeatedly becoming empty, full, or both empty and full; [they] are lusting only for deyouring the part of themselves (svāmśa) that is called the universe in its state as power (śākta), and pleased by (-bhāvitāh) the eradication of objects that have for a long time been fixed in mundane time. [All these powers] spread their respective mass of rays through their own throbbing (visphāra) [and] by excluding transcendence (lokotthavāmācāra) bring about the Śāstras appropriate to them, [Śāstras] that attain to fullness, because they are based on the real state of samkalpa, (362-365ab)

Such a religious practice which appeared first in the transcendent realm, will in this world [too] be in a state of non-duality. 63 (365cd-366ab)

Here [in our system] exists this great creation of Śiva which is replete and inside of which all other [cycles] of creation and resorption take place. (366cd-367ab)

It is not proper (ksamam) to say that this is the first creation, for how could something be first etc. in a reality that is without space or time. (367cd-368ab)

This is the state of waking; it is the principal [state] which partakes of the power of consciousness (*unmesa* = *cicchakti*). It is Brahmā, whose lotus throne consists of the awakening of his own constituent powers. (368cd-369ab)

These same powers of the Lord of consciousness unfold by taking on the forms starting with Sadāśiva and ending with Brahmā. (369cd–370ab)

Even though it is impossible to say that this God has a certain extent, because he, being the great Lord whose form is consciousness [itself], is not perceivable, he, being the grant and the being the grant has a said (kila) that as I have clearly stated in my Prabodhapañcadasikā: "It is said (kila) that the characteristic of matter lies in the fact that its light is limited. Knowledge is different from matter, for it cannot be delimited" – nevertheless this God, who is free from the means of 'measurement' [i.e. knowledge], makes himself into [the world of] moving and immovable [beings] through his own autonomy. (370cd-373)

The manifold existence of the ten Śiva divisions [of the Śaiva Śāstra] comes into existence from Iśana, Tatpuruṣa and Sadyojāta (ajāta) by taking them singly, [either] emerged or about to emerge, ⁶⁴ as six, as one group of three, and as three pairs. (374–375ab)

It is therefore through the blending of various states of consciousness 65 [peculiar to specific faces] that cognitions of duality are created in this (atra) [division] called Siva. (375cd-376ab)

When these three faces are combined with the left [Vāmadeva] and the right one [Aghora], then each of them has the potentiality to appear in future, to appear in present or to have appeared (?), and there are therefore three [states] in each of these six. The division of Rudra is therefore eighteen-fold. (376cd-377)

Since it is taught that each face itself consists of five faces, the tenfold and eighteen-fold division 66 are therefore innumerable through [further] divisions. (378)

As these [faces] have been described above as diverse through their own respective cognitions and actions, there is therefore no repetition in them. (379)

For in each of them (tatra tatra) a different (anyānya) knowledge [i.e. doctrine], prescribed religious conduct and ritual procedure is taught, but each of them leads to the light of Siva. (380)

Just as every single drop of water [loses its individuality] in the ocean, likewise all cognitions and activities come to rest in Siva, who is the ocean of consciousness. (381)

Even a small amount of water on the ground is invariably (kila) drunk up by the rays of the sun, and through rain flows again into the ocean. [In the same way] all knowledge and action in this world merges, either directly on its own, or gradually through other [stages], into the ocean of Siva. (382)

or gradually framework of the southern [stream], is [Siva's] symbol (linga) in the heart, which is called supreme heart. It is replete with all created things it has internalized. And because it devours the particles of light that belong to $m\bar{a}y\bar{a}$ and foster duality, it is, as it destroys everything, dark and has black colour. (383–384)

For this reason Siva has described the darkness of the pervading Lord with these words in the *Vijñānaśāstra*: "All space which rests in the heart (*mūrdhni*) [one should contemplate as Bhairava]". (385)

"In the same way he may for a long time, in a dark night, when the dark half of the month approaches, contemplate the form of Bhairava which is difficult to pierce (?) by contemplators." (386)

And it is taught that in [this reality] in which there is [empty] space, suffering or darkness, there is – once it is filled with non-duality – no connection with ignorance or *karma*, if one sees that [these phenomena] depend on [opposites] etc. (387)

When (yāvad) thereafter (tad) the four faces ⁶⁷ appear as completely dissolved in the form of Bhairava who appears as black, then [these four faces appear] simultaneously as divided into [four stages, namely] about to emerge, emerged, about to disappear, and disappeared, and thus becomes sixteen-fold. (388–389)

Entering into the [four forms of] Śiva, the southern (dakṣa), the emissive, the heart and the autonomous, this Śāstra is called Bhairava[śāstra] and becomes simultaneously sixty-fourfold. (390)

Thus a threefold Tantra exists which is called Rudra, Siva and Bhairava. For in fact the reality of knowledge unfolds threefold, through duality, duality-cumnonduality and full union with non-duality. And thus the main powers of Siva are three, [namely] volition[, cognition] and [action]. (391–392)

But among [these powers] a conjunction with five powers etc. [takes place] by extension (prapañcena). Being internally variegated (vibhinnam) in this way this trinity (trikam) [of powers] is the supreme [, and] such a Śāstra resides in the house of my Guru in an unbroken tradition. (393–394ab)

Therefore, because of its proximity to the Śāstras of the Vāma and Daksina, the stream on the highest limit (*prāntadharā*) unfolds as the Kaula. (394cd–395ab)

Thereafter, as Bhairava is completely filled with the limitations of the objects he has resorbed and is nourished by the sound that emerges from the highest reality, he embraces the three powers Aparā, Parāparā and Parā in the [three streams] Īśāna, Vāmadeva and Aghora respectively. (395cd–396)

So he unfolds the division of duality, he is the one who makes it manifest, then wishes to devour this endless manifested form of Śiva. In reality he is taught to be only three-headed. (397)

The Tantras of the upper [i.e. the Siddhānta-Tantras], of the left $(v\bar{a}ma)$ and the right [stream], as well as the Kulas are centred in this [highest] stream so that they loose the contraction through duality. (398)

Having become threefold, this doctrine of the Trika (*trikārtha*), which deals with the highest light, is taught by Śiva [in MVT 1.1] with the word "moon of knowledge". (399)

Part 3
Commentary

Section 1 Introductory Verses 1-13

verse 1 Prefixed to the introductory part of the work is a verse that appears in the same position in other works of Abhinavagupta, like Tantrāloka, Tantrasāra and Parātriṃśikāvivaraṇa. ¹ In the *Tantrālokaviveka* Jayaratha provides us with an elaborate explanation of this verse. In the first level of interpretation he gives a Kula/Krama interpretation: the "five faces" are, for instance, interpreted as the standard set of powers, namely 'consciousness, bliss, volition, cognition and action' 2 as well as the five streams (pañcavāha) of the Krama. 3 The main point of the verse is its second level of meaning, which contains an allusion to Abhinavagupta's parents Vimalā and Narasimhagupta (pañcamukha = simha) and to his being born from a union of the two.4

The next seven verses are devoted to the author's gurus, that is his teachers in philosophy and religion, and his father. Verses 9 and 10 would probably be termed 'proclamation of one's own capability and authority for writing the work' by a traditional commentator. 5 Then the repeated request of two pupils is given as the immediate cause for writing the work and the form of the work is justified.

At the end of the introduction we find another benedictory stanza that foreshadows the main idea of the first verse of the Tantra to be expounded and here

¹ The concluding verse 4 of the Gītārthasamgraha which is identical with concluding verse 5 of the Parātrīśikālaghuvrtti (abhinavarūpā śaktis tadgupto yo maheśvaro devah | tadubhayayāmalarūpam abhinavaguptam śivam vande ||), might be considered as an earlier

² pañcabhih cidānandecchājñānakriyātmabhih mukhaih, TĀV 1.1 (p. 7).

³ pañcānām vāmešyādivāhašaktīnām mukhaih, TĀV 1.1 (p. 11). See below, 46–47.

⁴ I may be brief here, as an extensive commentary on this verse will appear in SANDER-SON (1996). For the nirvacana of Bhairava to which the bharita alludes, see SANDERSON (1995), p. 62-63,

⁵ sāmarīhya and adhikāra. See Jayaratha's introduction to TĀ 1.15–16, where verse 15 is the 'commitment' to write a certain work (pratijñā) and 16 the announcement by the author of his ability to do so.

again a polysemic reference to the author's name is made. This pronounced again a polysettic reconstruction and to hide in anonymity – most evident in the bitendency of Abhilia 10g-1 ographical passage in TĀ 37 – is helpful to the historian and unusual for an

In the Vārttika the insertion of the word abhinavagupta in both benedictory. stanzas (1 and 13) might be no more than the known practice to "mark" or stanzas (1 and 15), magic or stanzas (1 and 1 would be more safely transmitted with the text than a colophon. The sheer quantity of self-references in his works might be seen by some as an expression of a remarkable historical consciousness of the Kashmirian intelligentsia, evident in works like the $R\bar{a}jatarangin\bar{\imath}$, but this is not the whole truth. In the case of Abhinavagupta we have to take into account the religious self-consciousness. that expresses itself in statements like the following: "For this reason, whoever studies this Śāstra composed by us, in order to gain an intuitive knowledge of consciousness, becomes a teacher. This is no boasting, but the truth."8 Andelse. where: "An intelligent person who always studies these thirty-seven chapters [that make up the Tantrāloka] becomes Bhairava incarnate."9

The doctrinal point behind the rhetoric of one's own self being Siva is obvious in a non-dualistic system and can be found already in the work of Abbinavagupta's predecessor in the Pratyabhijñā school, Somānanda. 10 Seen in the light of the notion that Siva has to act through the guru in Tantric initiation. their identification is - for dualists and non-dualists alike - also part of religious practice: the teacher grants liberation by being the medium for Śiva's power of grace, be it through the unification of the soul of the disciple with Siva in the

process of initiation, or – in the systems where liberation in life is the main aim process of initiation through a disciple the integral part of the religious structure, but mainly on the part of the disciple; ¹² a teacher hinting at his identity with Siva without veiling his personal identity and thereby filling the role of the guru is always on the border of overstepping the rules of decency in writing and bealways of the strong self-consciousness. We can discern a different attitude in Abhinava's teacher's teacher, Utpaladeva, who starts his *Iśvarapratyabhijñākārikā*s. by speaking modestly of himself as being a servant of Siva. In his Vimarsini thereon Abhinava, however, invests the passage with a different flavour: "With the words 'the state of being his servant' he expresses that a great fruit ¹³ accrues from this exposition of the recognition of god. A servant is [etymologically] one to whom everything is given by his master as he likes. This state [of being a servant] means that [Utpala] is a worthy recipient of the autonomy that is the highest Lord."14 That Utpaladeva was actually trying to be modest while declaring his ability to compose this work is clear from his own vrtti on the verse. where he speaks of being "ashamed of [his] solitary success" (ekākisampadā lajjamānah). 15

verses 2-4

The three verses are devoted to Sambhunātha, the author's teacher in the Trika. 16 At least in the works that deal with this system, i.e. all commentaries on the MVT, he is the teacher par excellence (see 394ab) and simply called "my teacher".

In a fashion typical of the dhvani school the comparisons and identifications envisaged in the verse are only outlined and the reader is supposed to fill in the missing parts, as for instance the identification of the teacher's knowledge

⁶ TA 4.278 and 37.85, being at the end of chapters, could be interpreted in this line. Kayyan on Devīśataka 101 (ed. Kāvyamālā 9) uses the word ankaśloka.

⁷ The Rājataranginī for instance is as much a historical work as a Kāvya. See K"LVER's das cussion of Kalhana's introductory verses. KÖLVER (1971), p. 113f.

⁸ Literally: "For true things do not deceive", tatah prātibhasamvittyai śāstram asmatkram t idam | yo 'bhyasyet sa gurur naiva vastvarthā hi vidambakāḥ || TĀ 13.160. The comments tor Jayaratha introduces this passage with a question that suggests itself in a culture, where the author's anonymity is highly respected: "Is it not a great deception [perhaps: 'ndisalous'] to praise one's own work in this way? In reply to this he says: 'For true things do not deceive". nanu mahatiyam vidambana yat svayam eva svakrtim praty evam prategod

⁹ iti saptādhikām enām trimsatam yah sadā budhah | āhnikānām samabhyasyet sa siksl bhairavo bhavet | TĀ 1.284cd-285ab. The number thirty-seven plays on the number of

¹⁰ See Utpaladeva's explanation of Sivadṛṣṭi 1.1 in his commentary: "We, whose self is Śra bow down to the highest Lord." vayan śivātmānah parameśvarāya namaskarmāni

¹¹ See for instance the role of the guru in anupāya and śāṃbhavopāya, and Śivasūtravimarśinī on 2.6 (gurur upāyah).

¹² Compare Svacchandatantroddyota 1.45ab (vol. 1, p. 40), where Ksemarāja calls his teacher the "manifestation of the highest Bhairava" (parabhairavasphāra).

¹³ The phrase echoes mahāphalatvam taddāsyam, which is probably from Utpaladeva's lost Tīkā. Cf. ĪPV vol. 1, p. 21.

¹⁴ lasya däsyam ity anena tatpratyabhijñopapādanasya mahāphalatvam āsūtrayati | dīyate asmai svāminā sarvam yathābhilaṣitam iti dāsaḥ, tasya bhāva ity anena parameśvararūpasvātantryapātratā uktā | ĪPVV vol. 1, p. 14.

¹⁵ Cf. TORELLA (1994a), p. 1 and 85. The same phrase is adopted by the commentator Padmapada on the first verse of the *Prapañcasāra* and applied to the Śańkara, who is sup-16 For Abhinavagupta's gurus, cf. SANDERSON (1996).

with the sun (bodhāditya). This can only be known from the fact that 'lous' (ambhoja') and not the night-blossoming water-lily is used here. A reference to the moon is saved for a later occasion (cf. 7).

The clues that lead one to the next comparison are even less clear. Although it would make perfect sense to translate *arthaughāh* as "multitudes of doctines", the use of the words "current" and "stream" points to a comparison of the entirety of knowledge with an ocean, ¹⁷ and the ability of these currents to lead to liberation is compared to the cooling effect the water has on the "hear of *saṃsāra*. The doctrines are "radiating in" these streams, evoking the poetical convention of jewels in oceans or rivers, which produce their glittering. A similar image is used in the IPV. ¹⁸

As we will see, the division of the Saiva revelation into five streams and the position of the Trika on its top is the main theme of the first "chapter" of the Vārttika which is translated here and it is not unlikely that Abhinavagupta wishes to allude to this thesis in the opening verses, especially in connection with his teacher Sambhunātha, who seems to be the source for this peculiar interpretation of sadardha. The translation of the compound in 3a, which rests on this assumption is, however, tentative and I am well aware that it might be an overinterpretation; for sad has to be read twice (kākākṣigolakanyāyena) and a slightly awkward compound be endured. But as will be explained in 164cd-165, the word 'half of six' for Trika is used to encapsulate a doctrine, according to which the three parts that constitute the Trika are formed by the "first half" of six streams: the five known to the Siddhanta and the uppermost stream, the one 'above the higher' (ūrdhvordhva). Although the expression "first half" is difficult to interpret, it is clear that the highest (ūrdhvordhva), the left (vāma) and the right stream (daksina) are meant. For the adherents of this trinity it thus encompasses in some sense the whole Saiva revelation and could therefore be described as its culmination, its "aim" (artha). The word abhimarśa is, however, very unspecific; in my explanation it would have to represent the sixth stream. The translation is of course problematic, but I think it is very unlikely that the author would mention the five streams in connection with his teacher Sambhunātha, who is later quoted as the authority for this peculiar interpretation of sadardha, without hinting at the main thesis. I am aware of the fact that trikārtha often means no more than "Trika doctrine", but the straightforward rendering, e.g. "in the Trika with its awareness and the five streams", cannot work, because the Trika is not on the same level as the five strotas, but is conceived as their essence.

Sumati, Śambhunātha's teacher, is the first guru of the Trika known to later authors and this paramparā is referred to as 'disciples of Sumati' (TĀ 1.213).²⁰

perse 5
Prof. SANDERSON pointed out to me that yuktah is most likely used here in the sense of abhiyuktah. The reading janakam for yuktam śrī- is rejected as the lectio facilior. I have kept the spelling cukhala as transmitted in all manuscripts of the Vārttika as against cukhula (see below), because I cannot see any criterion that would establish the correct form.

Commenting on a similar introductory verse in the TĀ, Jayaratha gives a more formal explanation for the fact that Abhinavagupta not only included his father in the list of *gurus*, but placed him in the highest position: "It is said [in *Manusmṛti* 2.145ab] that "a master (ācārya) is ten times more [venerable] than a teacher, the father a hundred times more than the teacher [...]" ..."²¹

Pādas c and d could be interpreted in several ways; firstly the forming influence (saṃskāra) of his father, who was withdrawn from the world, perhaps after the death of his wife, could have created the resolve in Abhinava not to marry, and therefore "remain free from attachment". Secondly, the intellectual educa-

¹⁷ Cf. 381d and śivajñānamahodadhau in Nityādisaṃgraha, folio 3^v, line 8.

¹⁸ Introductory verse to the Āgamādhikāra:
yam prāpya sarvāgamasindhusanghaḥ
pūrņatvam abhyeti kṛtārthatām ca |
tam naumy aham šāmbhavatattvacintāratnaughasāram paramāgamābdhim ||

ratnaughasāram paramāgamābdhim ||
19 With "chapter" I wish to indicate the first unit of the text (15–399), which deals with the pañcas rotas, and not the first Kāṇḍa.

²⁰ Commenting on TĀ 1.213 Jayaratha insists that "those who know the order of this descent [of gurus]" place Somadeva between Sumati and Śaṃbhunātha (śrīsumatināthasya śrīsumadevaḥ śiṣyaḥ, tasya śrīsambhunāthaḥ it hi āyātikramavidaḥ) and wishes to interpret all evidence to the contrary as a mere emphasis of the first teacher of the lineage. But it is hard to imagine that authors in a tradition that is defined by their line of teachers would be so careless. SANDERSON has proposed a convincing solution, namely to emend in what seems to be Jayaratha's only textual evidence for the insertion of a Somadeva – i.e. TĀ 37.61t. śrīsumataḥ sakalavit kila śanbhunāthaḥ – the word somataḥ to saumataḥ: "a disciple of Sumati"!

²¹ Idanin - upādhyāyād daśācārya ācāryāṇām śatam pitā - ityādyuktyā tasyācāryād api gauravātirekasmṛter nijam api pitaram āsīrvādamukhena parāmṛśati - yaḥ pūrnānandavisāntasarvašāstrārthapāragaḥ | sa śrīcukhulako diśyād iṣṭam me gurur uttamah ||1.12|| - cukhulaka iti lokaprasiddham asya nāmāntaram | gurur uttama iti uttamatvasya ācārvagauravātirekasmṛtir eva nimittam, ata eva anyatrāpi [i.e. in MVV] - gurubhyo 'pi garīyāmṣam janakam cukhulabhidham | - ityādy uktam. See BÜHLER (1979) for the controversial interpretation of Manusmṛti 2.145 and 146.

tion received from his father could be hinted at. 22 Furthermore it could televis the normal Vedic samskāras performed by the father for the son, including the

In order to determine the most likely interpretation, it would be necessary to ascertain whether Abhinavagupta's father was a Saiva, or even a Saiva dolore For if he was, a reference to Vedic rites would be less likely. But the evidence for this is not without problems. Abhinava's father is described by him as his teacher in grammar, logic and poetics; he also developed devotion to \$10.20 and received dikyā from Bhūtirāja. 25 Finally there is one reference to an active Narasimha in the Vārttika, 26 which in the absence of other persons of that name

At the moment the evidence is not conclusive; we can only exclude the posibility that Narasimhagupta initiated his son into Saivism, for this would have surely be mentioned elsewhere. Perhaps he became a Saiva initiate only after

The contradiction with the preceding verse, where his father has been said to he higher than the teachers, is only apparent, because Bhūtirāja was also his

The compound samvidamodasandarbha is the turning point of the verse where the two levels of meaning are indicated and merged: "the compositions of the fragrance (āmoda) that is the bliss (āmoda) of consciousness". The poetical figare is that of an identification (rūpaka) of the thing to be compared (upaneya) and the standard of comparison (upamāna). 27 The poetical image is that of the

22 CY. Brhadvimarsint, vol. 3 p. 405, v. 2 samskytamati.

moon enjoying the beauty of the night-blossoming water-lilies that open only moon edjoying the control of the upamāna frimat has to be under-under his influence. For the translation of the upamāna frimat has to be underdood literally as "possessing beauty".

TA 1.10 is closely parallel to this verse and Jayaratha in his commentary TA 1.10 commands is the teacher who first undertook the investigation points our una point una points our una point our una points our una point our una ciple Utpaladeva holds the position of being the commentator thereon. Elseuper upa de la company de la c the Stradesti, as "[the text of] our lineage". 29 But in fact this text does not know of the concept of Pratyabhijñā and from a historical perspective it is more correct to call Utpaladeva the founder of this school of thought. 30

The position of taddrati may be explained by its referring back to the preceding verse. To take taddrsti as not congruent with pratyabhijñā would result in a clumsy interpretation ("who teaches the recognition which cuts off samsāra through his system"). taddṛṣṭi could be seen to refer to Somānanda's philosochical system by alluding to the name of the work (Sivadrsti) or, preferably, to Utpaladeva's system, the Pratyabhijñākārikā. In this way the guruparampară Somănanda → Utpaladeva → Laksmanagupta → Abhinavagupta is com-

Laksmanagupta, Utpaladeva's disciple, was Abhinavagupta's teacher in the Pratyabhijñā. No work of his seems to have survived. RASTOGI however says that 'the only definite word in this behalf is met with in a statement where he is stated to have produced a work called 'Śrīśāstra'". 32 He then argues for the identification of Laksmanagupta with Laksmana Desika, the author of the Śāradātilaka, on the testimony of the commentator Rāghava Bhatta. 33 This

²³ Thus the "samulctament", too, would be covered. I am grateful to Prof. SLAE for this

²⁴ Compare e.g., samsåravrnänsoparlitmikko yalt tivalkacimat cikholitikidhänd, tat srimilikāvivaraņa, concluding verse 12cd, and yam sarvalāstrarasanajjanalubinusus müheivari param alamkuruse sma bhaktih, TĀ 37.54cd.

²⁵ Prof. SANDERSON alersed me to IPVV, concluding verse 1 (vol. III, p. 405), when the father is described as sixomorganisthah and as "one in whom all duriness of exists." has been destroyed by the ray of reality from the Saiva Statra spoken by Bhindig (\$120 des Esperatario bisas ambinatario cuati rem tasteira amassabhar in Brakis des

²⁷ A similar compound appears in the example verse to Mammata's Kayaprakiis NS (p. 373), where a paramparitaripoka based on a flesa is demonstrated, sidnaminas

hamsa, 'O swan in the manasa lake, which is the mind of the learned'

 $[\]ensuremath{\mathcal{B}}$ The reading of TA 1.10 is suspicious: frisominandabodhasrimaduapalavinisriah. Here the caesura is inelegant, as it splits frimat, and one might consider reading with the Vārmka here, for the wording of the $T\bar{A}$ is not secured by the commentary. But this is difficult to decide, as the author might have consciously positioned frimat in this way in order to point to the intended interpretation.

²⁹ PTV, p. 178: sampradäyaprathamähnike 'pi ...

³⁰ Cf. TORELLA (1994a), Introduction, p. XX and passim. 31 For more up to date information on Pratyabhijitä, see TORELLA's excellent introduction to his edition and translation of Utpaladeva's auto-commentary on the IPK (TORELLA

³² RASTOGI (1979), p. 147.

¹³ Righava Bharta on Saradanlaka 1.3 and 5.138f trying to fabricate an ancient authorship for

would lead us to the absurd conclusion that the Śāradātilaka was one of the would lead us to the earliest Śrīvidyā works, written by the teacher of Abhinavagupta, but without any trace of the "philosophy of recognition", instead describing Siva with the any trace of the philosophia with the Vedantic term saccidānanda (1.7).³⁴ Apart from the commentator's wish to link the work to the Kashmirian Pratyabhijñā lineage, we have only a statement from the IPVV that is adduced by RASTOGI in order to prove his theory that Laksmanagupta composed a "Śrīśāstra". But this rests on a misunderstanding In fact, the line in question, (śrīśāstrakṛdghaṭitalakṣmaṇaguptapādasatyopadarsitasivādvayavādadrptah, ĪPVV III, p. 406) means: "I [Abhinavagupta] have become proud through the doctrine of identity with Siva, which has been shown to me by the sincerity of the venerable Laksmanagupta, who has reached his goal/was united [with Siva] (ghațita) by the author of the glorious Śāstra", i.e. by Utpaladeva as the author of the IPK!

The form apya has been noted as irregular by Śaranadeva (Durghajavrtti, ed. RENOU, vol. 2.2, p. 80ff.), which is more realistic than to explain it as being derived from ā-āp.

By assuming an irregular, but by no means infrequent use of api in the wrong position (bhinnakrama) we arrive at a more convincing interpretation than to translate, for instance: "I hope (api) that through him (yena) the bee of my mind

Nāda is translated as "doctrine" to make the ślesa clearer; it is - of coursedoctrine on the undifferentiated level of speech.

The "intoxication" reappears in a slightly different context in the concluding stanzas of the TA, where he takes the reader on a short trip through his intellectual and spiritual life: After having been introduced into the "thicket of words". i.e. grammar, by his father, and after having purified his mind with drops from the ocean of logic, it was during the enjoyment of the intense emotions of poetry that he was seized by an intoxicating devotion to Siva which came completely by itself. As a consequence he did not "value the way of the world" any more and went to different teachers who are then described. 35 This might be taken as the context of the two stanzas under discussion.

In the poet's imagination the "bee" goes from one plant to another in search for new taste as soon as it is dissatisfied. 36 It is used by Abhinavagupta as a metaphor for the disciple who goes from teacher to teacher to find the highest metaphish for a metaphish for the metaphish for to go to other gurus, if one cannot get full knowledge from the present one. 38 Given the doctrinal and social context, this metaphor is not far from describing religious conversion, ³⁹ as becomes clear from one passage in the *Tantrāloka*; in a description of the characteristics of a teacher, Abhinavagupta quotes his teacher Śambhunātha, who taught that one ought to adopt only a Guru who is well grounded in knowledge. "[Every] other [teacher] one should give up, even if already accepted. For this is taught by Siva ...". 40 Jayaratha refers to a rule, which promises death to a disciple who abandons his teacher 41 to introduce the quotation from an unnamed scriptural source that immediately follows in the TA: "As a bee searching for fragrance wanders from one flower to the next, a disciple desirous of knowledge should wander from one teacher to the next."42 As another predecessor who followed this method, he quotes Kallata, who said: "The sequence of my teachers ranges from Tapana to Motaka. 43 Being a disciple of everyone, I am not short in teaching."44 And Abhinava adds that he even went to teachers of lower doctrines and indicates that the same is implied in the Mālinī, where the sages who come to hear the doctrine were previously

¹⁴ To my best knowledge only *cidānanda* ever is used by Abhinavagupta and his predecessor.

47 TĀ 37.65; śrīśaurisanjjīatanayaḥ kila karṇanāmā yo yauvane viditaśāṇbhavatatīvasūraḥ deham tyajan prathayati sma janasya satyam yogacyutam prati mahamuniktsuwiktsu "Karna, the son of Sauri, who as a youth had already experienced the essence of the reality of God, has by giving up his body shown that the word of the great seer Kṛṣṇa about those fallen from Yoga is true." RASTOGI's account is slightly confused: "Karna's young wife Ambā also grew detached from the worldly affairs and devoted herself exclusively to be worship of Siva when her husband died later at an advanced age."(RASTOGI (1987), p.2) For this he quotes verse 77 which mentions that his wife was deprived of her husband at the state of the stat early age (agre vayasi). agre could mean "advanced", but this makes hardly any sense in the context. On the contrary the verse from the TA is an indication that Kama died early the context. the passage from the $Bhagavadg\bar{u}\bar{a}$ as identified by GNOLI talks of those fallen from log to the $Bhagavadg\bar{u}\bar{a}$ as identified by GNOLI talks of those fallen from log to the $Bhagavadg\bar{u}\bar{a}$ as identified by GNOLI talks of those fallen from log to the $Bhagavadg\bar{u}\bar{a}$ as identified by GNOLI talks of those fallen from log to the $Bhagavadg\bar{u}\bar{a}$ as identified by $Bhagavadg\bar{u}\bar{a}$ (yogabhrasta). Kṛṣṇa replies to Arjuna's anxious question on the fate of one who is under to attain the perfection of Yoga (6.37). The answer is that he is born under good circumstances (43). stances (42) or even in the house of Yogis (43) and is able to attain perfection quickly. In

This is further indication that the Vārttika predates the TĀ. Mandra, son of a minister, was a friend of Karna from childhood. 48

inister, was a free and in the state of the state of the reading vartaye that I have accepted does not give any other meaning than kathaye, but is presumably the lectio difficilior.

g than kannaye. The passage that describes the author's method, or rather philosophy of in-The passage that the pa terpretation (1762) terpretation (1762) terpretation (1762) and consider attempts to interpret this passage is no less complicated. (49 Abhinavagupta emphasizes that interpret this process on "sentences" (vākya) or statements of a scripture. The his explanation his is perhaps the peculiar exegetical principle of the Trika, through which the author constructs a hierarchy of doctrines in a single Tantric text: not the complete text is explained as a unit, but different layers are attributed to levels inside the doctrine, like the *tantraprakriyā*, *kulaprakriyā*, *mata* etc. ⁵⁰ A commentator on the Mālinīvijayottaratantra therefore has to structure material according to levels of meaning: the chapter on the Kaula rejection of outer ritual cannot be interpreted on the same level as the description of concrete ritual, and is not invalidated by it. The lower level, i.e. the injunction of ritual, is taught, but cancelled on the higher level. This gradationist model is in fact an intelligent way to maintain the internal consistency (ekavākyatā) that is demanded for the demonstration of the validity of Agamas as a whole to the outsider. In the Vārttika Abhinavagupta aims at these more esoteric levels of meaning and therefore has to justify the omission of the lower doctrines (itara) that are also part of the Mālinītantra. The word vartanam ("Verfahren", pw) would in this interpretation refer to the different practices taught on these various levels, and is therefore more or less synonymous with [sam]ācāra.

There is probably no one translation for the frequent word-game with the author's name and the translation given is just one possible interpretation. In a

48 Understood in this way, the compound tadbālamitram in TĀ 37.66 could be related to the fact that they are often described together; GNOLI's translation ("Amico di questo fancialla, ullo ...") is less likely, as he is mentioned as the instigation for writing the Vartika where he must have been even younger.

Abinavagupta's practice of not quoting literally would not extend to Pāṇini. 50 See SANDERSON (1997) on the levels of initiation in the Trika. Cf. also PTV, p.91f.

our context this means that Karna, through his enlightenment at an early age, has proved to be a former yogabhrasta who has now quickly obtained (final) liberation. It is also a subtle way of showing respect for his sister's relatives.

⁴⁹ For some time I worked on the assumption that 12cd referred directly to Astadhyāyī 4.4.102 kothā ibis. kathādibhyas thak, depending on the adhikārasūtram: tatra sādhuḥ [4.4.98]. Fortunately Dr. Peri Sarvesvara Śarma convinced me that etasmin sādhu is not tatra sādhuh, and that

similar instance - in TÃ 4.278: "Only the extraordinary sage Abhinavagupta is fit to perform this sacrifice", 51 – Jayaratha tries to fill the name with doctrinal

"He who is everywhere (abhi) - that is in the multitude of conscious and unconscious [objects] that are completely divided into innumerable frae. ments like subject, object etc. - preserved (gupta) - i.e. with his pervading (vaibhava), omniform nature guarded although obscured through the delasion maya - through the praise (nava) of the self that is an awareness of the qualities that are unbroken ability to know and act; and therefore only [such] an extraordinary being, [i.e.] the author [abhi-nava-gupta] is fit to perform this sacrifice]. This is the meaning,"52

Section 2 The Mūlasūtra

verse 14

This is a full quotation of the introductory verse to the MVT. Saiddhāntika commentators like Bhatta Rāmakantha II are anxious to identify the first verse or statement (mūlasūtra) in a Tantra, for it contains the entire work in essence.1 It is situated often at the end of the introductory dialogue. To my knowledge Abhinavagupta does not apply this terminology to the Mālinī, although it is part of the exegetical repertoire of his school.2 But his commentary shows that the introductory invocation (mangalaśloka) is, or is equivalent to, a mūlasūtra.

In some way the first part of the text that is translated here explains the second line of this verse, namely the philosophical implications of the image of the rays of the moon on Siva's head that are reflected in and exuded from his face. The justification for Abhinava's laborious attempt to work out the philosophical details lies in the identification of the moon with knowledge. 3 In its descent the light of knowledge articulates itself in successively grosser stages and thus becomes the Agama, i.e. Saiva scripture. Connected to this spatial descent is a descent into creation: the knowledge embodied in this revelation becomes diversified as the world is being differentiated from consciousness on the lower levels of the universe. The crucial stage of differentiation is however that into five powers represented as Siva's five faces.

With this interpretation our author tries to demonstrate not only the philosophical side of the dictum that the Agama are valid, because they are taught by Śiva, but also how a diversity of Agamas with sometimes incompatible doctrines can be attributed to a single deity. But this is not a service done by a nonsectarian to the Saiva community; for Abhinavagupta only the Trika - of which

⁵² The synonyms given in the commentary are omitted in the translation (navah = 1879). ko 'pi = alaukikah etc.). abhito grahyagrahakadyanantabhedaxambhinne jadijadawa yo navah anavacehinnajfiatyakarirtyäimakagunaparämarsanarupah syaimastasah kee guptah mayayyamohamuşitatve 'pi parirakşitasarvatmyamayanijavaibhavah ala et s koʻpi alaukikah atha ca evamvidhoʻyam eva granthakaroʻtra yogya ity arthab [Cl. 26] IPV 2.3 Loubhiro IPV 2.3.1: abhinavodayah iti abhinavah kyanavāsaparimlānyāpi na kalankiah, um vanavodaya ity uktam bhavati, vol. 2, p. 66f.

The crucial compound jūānacandra is quoted in 399 to mark the end of the first chapter of the Vārttika.

the MVT is for him the most important text – can explain this structure, because through being part of the highest knowledge, while simultaneously encompassing its lower expressions, it is the essence of the whole revelation.

Section 3 The Nature of Knowledge

verses 15-17ab

Vaibhavam in 15d is adopted as the lectio difficilior.

For his conjecture in 16a Prof. SANDERSON has adduced the use of the verb tan throughout the Vārttika: tāyante 49c, tenire 161b, tanvate 164b, tanute II, 201c.

Here the main part of the commentary starts by examining the meaning of the "knowledge" mentioned in MVT 1.1 and by introducing some of the key ideas that are discussed later in the work: the identity of the "limitless reality", i.e. the highest form of Śiva, with the world (15ab); the appearance of diversity without division from the source in the simile of the light and its rays; and the description of consciousness itself $(hrdayam = cid^{-1})$ as an active and creative awareness.²

The whole passage has some similarity with IPK 1.5.13–14, where the nature of "cognition" (citi) is described as "vimarśa" and with a set of synonyms, and is then summarized as "the heart of the supreme Lord".

An exegetical etymology for *hrdaya*, which shows that the heart of Śiva stands for consciousness itself, is given by Abhinava in the *Parātriṃśikā-vivaraṇa* (p. 61):

"ht is consciousness, the ultimate foundation of everything, [that is] of [objects] like "blue", or "joy" and of [limited identities like] "body", "life force", "mind" and [emptiness]. Its "ayas" are the various cognitions like those [of material objects] like pots etc. that are held in division by its own autonomy."

¹ hrdayam bodhaparyāyah, see Mrgendratantra, Vidyāpāda 1.3.11c

² For further information on this philosophical position, see TORELLA (1994a), p. 111–127.

³ The series normally includes the śūnyapramātr.

⁴ sarvasya nīlasukhāder dehaprānabuddiyādeš ca param pratisthāsthānam samviskima hri tasyaiva nijasvātantryakalpitabhedā avā vicitrāni ghatādijāānāni. The word aya is

Thave translated the term vimarśa and the other derivations of the verbal roy Thave translated the context, by "awareness" or "articulation". Unlike or and other words for consciousness, vimarsa implies "awareness of something" and other words to and in the Pratyabhijñā philosophy this "awareness of" is always concomitant with a verbal representation of the object, in other words, there is no pure, nonverbal and non-differential cognition of an object. 6 In most cases vimaria is therefore more or less equivalent to vikalpa, but there is an important exception: "The awareness "T" is not a differential thought". The "T" in this content is not the sense of individuality (aham) and possession (mama), which belones to the artificial (kṛtrimā) self and is otherwise called ahaṇkāra, but stands for the "full identity" (pūrṇāhantā) that includes everything. But ahaṃpratyaya marsa has a further connotation: the "articulation of aham" describes the stage in the development of consciousness, in which language appears in an "essential form", as a contraction of all sounds of the Sanskrit alphabet, starting from a and ending with ha, while their non-distinction is symbolized by the bindu

artificially formed from the verbal root i in the sense of cognition (compare itih): tad akting somānandapādaih svavivrtau 'hrdy ayo gamanam jñānam' ityādi, Parātrimskāmars

Section 4 The Trika

verses 17cd-20ab

mayat in svātmamayī can be understood in the sense of "being a part of something" (avayave, Astādhyāyī 4.3.135 and 143).

In this context parā in 20a most probably refers to parāvāk.

For ūrmi, cf. the description of the first moment of desire for creation in Śwadrstivrtti: "This urge is called a subtle swelling by Pradyumnabhatta in his Tattvagarbhastotra and 'wave', 'flow' etc. by others."1

In the first few verses the author has defined the highest reality more or less in the terminology of the Pratyabhijñā; in this passage the same reality is described in terms of a pantheon. This process is followed throughout the text and aims at placing schools that adhere to these pantheons on a hierarchy of levels thereby subsuming three aspects: (1) a level of reality (tattva) with the corresponding experience of liberation; (2) a pantheon which identifies a specific school that focusses on this level of reality; (3) a revelatory scripture that is the direct expression of the corresponding reality-level, that teaches it and that provides the means to attain it.

Applied to our passage this means that the experience of the unity of Siva and his power is described in terms of the Trika pantheon as the equilibrium of the three powers (20). In the evolution of the Śāstra this level corresponds to the "highest face" of Siva that is - as he will argue later - different from the "upper face" (i.e. Īśāna) (162). The use of the word visarga in 18d, in a phrase that is almost identical with Sivadrsti 1.10b, suggests that this highest face is to

⁵ The latter meaning was proposed by Prof. SANDERSON in the context of "phonematic" at

^{6 &}quot;The nature of articulation (pratyavamarśa) is to produce sound (sabdanam) which is into expression". pratyavamaršaš ca antarabhilāpātmakašabdanasvabhāvah. ĪPV 15.13, sa

⁷ aham iti pratyavamarsah asau vikalpo na bhavati IPV 1.6.1, vol. 1, p. 239. There is one passage where Abhinavagupta tries to emphasize this point by using vinuaria for the vikalpa-variety and pratyavamarsa for non-differential awareness (suddhe hamparasa marse "pohanavyāpārāsambhavah ĪPV 1.6.1, vol. 1, p. 237; ityādivimaršah sa vikalpa en na tu śuddham pratyavamarśamātram IPV 1.6.1, vol. 1, p. 231, tyaanvamarsus indication of a purtua samātram IPV 1.6.5, vol. 1, p. 248), but I have not found indication of a purtua samātram IPV 1.6.5, vol. 1, p. 248). indication of a systematic differentiation in meaning between amarka, paramarka, vineral

The Tattvagarbhastotra is lost except for some quotations. Amongst these is a verse which mentions the term in question: kimciducchūnatāpatter unmeṣādipadābhidhāh | pravartante tvayi sīve saktitā te yadāmbike || . See DVIVEDA (1983a), p. 55f, for a compilation of the verses cited in different sources and DY-CZKOWSKI (1992), p. 291, for the author.

145

be identified with the kaula aspect of the Trika 2

A list of synonyms for the "supreme reality" that is similar to the one in 20ab. is to be found in Ksemarāja's Parāpravešikā: "This awareness (vimarša) is described in the Āgamas with words like 'consciousness, sentiency ...' ³ The motivation for providing such a list of identifications might be the fact that the term vimarsa is not a concept found in early Tantras.4

Jayaratha explains samghatta as "the fusion of Siva and his power"5 and adds that the heart, although by nature inexpressible, is expressed by the word Trika in the highest sense, which denotes this fusion. 6 Abhinavagupta uses the phrase "perfection through union" (samghattasamāpattyā) in the PTV.7 This 'union', besides being a sexual metaphor, implies, on the level of the phonemes the union of the primary reality denoted by a [=anuttara] with its own identity [a+a], which leads to \bar{a} [= \bar{a} nanda].

Unless we emend to ... mātram mātr..., we have to understand mātra to refer to trayam. I have provisionally accepted this as a peculiarity of Abhinavagupta's

As mentioned above, the main thesis of this part of the work is the demonstration of a congruence between the structure of reality as conceptualized in the Śaiva systems and the structure of the Śaiva canon, in order to lend special justification to the Trika as the only system which comprises this structure. In the Trika the primordial reality is threefold and the highest state is defined by the dissolution of these three powers in bliss. This experience, which is equivalent to liberation, is characterized not by the absence of the world, but by the absence of "contraction through fear". In the present context sanka

2 See below on the term visarga, and SANDERSON (1997) for the differentiation between

and samkoca describe the same phenomenon as cause and effect, 8 but the and samkord and enect, but the connotation of sankā needs further elaboration. As a philosophical concept connotation of the individual trying to protect his identity by excluding things or experiences that seem to threaten it, and thereby by excluding the state of the s specifically these limitations were described as "eight possessors" (graha); "obsession with caste (jātigraha), Vedic learning (vidyā-), the social standing of one's family (kula-), with orthodox conduct (ācāra-) ..."10 Psychologically complementing these identifications were the "fear of loss of identity (ātmaśańkā), of participation in non-Vedic rites (divyakaraśańkā), of impure Tantric incantations (mantraśańkā), fear of contact with the forbidden substances that are offered and consumed in Tantric worship (dravyaśańkā) ..."11 Behind these formulations were of course the transgressive practises of the heterodox cults like the Kula or Krama, 12 where the gratification of female deities with forbidden substances was enjoined in order to overcome these inhibitions and thus transcend one's limited identity. 13

verses 22-24ab

In 22a śaivadrstau is used as a metrically correct variant for śivadrstau.

Somānanda's Śivadrsti 1.3-4 is quoted several times as the authority for this idea. 14 The syntax of the second line of the quotation (23ab) requires some explanation. I translate the relevant portion of Utpaladeva's commentary:

"But in the supreme [non-dual] state one's own nature shines forth as 'I am complete'. As it shines as this [experience], it is cognition; as it is of the nature of energy, it is action; as we accept it to be of this nature, volition also exists [there]; - therefore he says 'then this is volition ...'. [Because of the neuter tāvat] we have to construe 'and action is [of] that nature'. Alternatively the tāvat that refers to jñānam could be read [a second time] as

9 For the following, see SANDERSON (1985), p. 198ff.

³ eşa eva ca vimarşaş cit caitanyam, svarasoditā parā vāk, svātantryam, paramātmano mudyam aiśvaryam, kartṛtvam, sphurattā, sāro, hṛdayam, spanda ityādiśabdair āgamesid ghosyate. (p. 2) The model for such lists is probably IPK 1.5.13-14.

⁴ For the identification of some of these terms, see SANDERSON (1995), p. 70f, where against sources for a similar list are given.

⁶ TĀV 1.1: tad evam atra visargaprasarasvabhāvatvena jagadvaicitryabījabhātam fin saktisamghattātmakaparatrikasabdavācyam anākhyātmakam vighnaughapradhymsis paramṛṣṭam (p. 7). This is then followed by the quotation of our passage from the Variable tade even 14.

147

a feminine [to agree with] kriyā, and the second tāvat at the end could have the sense of 'succession' with reference to the state intermediate [between non-duality and duality]." ¹⁵

It has been observed that Abhinavagupta's method of quotation is problematic, if one wishes to establish the exact wording of the quoted text. ¹⁶ Similar problems occur when he names the source as a/the *guru*. I propose distinguishing the instances in the *Vārttika* into three types;

- In combination with a name or title of a work: the passage discussed here 22: yad uvācotpalagurur 270a; śrīmadutpalagurur nyarūpayat 696c; guruh sankaranandanaḥ 431a; nirnītā lolaṭākhyena gurunā lokasanmaiā 778ab; ye śrīmadbhavatītyākhyagurupādopasevinaḥ 835ab.
- 2. "my guru": asmadgurugrhe 394a; asmākam gurur jagau II, 40.
- 3. "gurus" in general: gurur ūcivān 32b; gurubhir bhāṣitāni 165d; ¹⁷ tathāhi gurur ādikṣad II, 111c; ¹⁸ asmadguruvargasya II.264a.

The references under 1. are unproblematic, those under 2. can, at least in the works on Trika, be interpreted as referring to his teacher in the Trika, Śaṃbhunātha. None of the instances under 3. can be interpreted with any certainty; they might refer to a specific person in the honorific plural, to Śambhunātha or to gurus in general.

4.1 Śāstra as the Knowledge Inherent in Consciousness

If the pūrvapakṣa had remained silent here, the structure of the whole work would have emerged more clearly. But the question initiates a protracted discussion of the "basics" of Pratyabhijñā and their bearing on the concept of revealed scripture.

verses 24cd-25ab

The pūrvapakṣa raises one of the main problems in the author's argumentation. It may seem strange that the opponent argues against a thesis that has not yet been made, but I suppose that the proposition that is perceived to be problematic can be inferred from 17a, where it was stated that the primordial reality is essentially "articulation" (abhimarśa), and that one would have to understand this as an interpretation of MVT 1.1. The question therefore really means: if the rays emitting from Śiva's mouth are the source of the Śāstra and the further development of the world ¹⁹ and reflect his consciousness without distortion, and if, moreover, Śiva is conceived of as a non-dual reality, then the existence of a Śāstra, or even a plurality of Śāstras with potentially conflicting theories and injunctions, cannot be explained, as they would depend on differential thought, which is excluded in a non-dual reality. The question is not really settled until 49 and the answer deals with various issues involved: the relationship between light and knowledge, light as a direct expression of the knowledge inherent in it, inclusive non-duality, differentiation without real division, absence of time etc.

There are several ways to understand the compound śāstrādisampadaḥ and the related phrases in 39 and 49. Theoretically sampad and, especially, vibhūti (49) could be taken to mean siddhi, but this is debarred by the context. Taking sampad merely as a plural marker is possible, ²⁰ yet the interpretation as an

^{16 &}quot;He seldom quotes, usually paraphrases" GOUDRIAAN AND GUPTA (1981), p. 163. In the TĀV Jayaratha fortunately tries his best to provide the reader with quotations of passages that have been summarized in the TĀ, but this evidence is usually not without its own problems.

¹⁷ This could also refer to Sambhunātha, as in 394a, but equally to the whole parampara otherwise called the "disciples" of Sumati (see above).

data and TORELLA has indicated the possibility that the author of the Samvitprakise might be identical with Abhinavagupta's teacher Vāmanaka (see TĀ 37,62). This issue problematic, since there is no consensus as to whether the author of the Samvitprakise mañjarī and the author of the Samvitprakāsa are identical. TORELLA has with cantion mañjarī and the author of the Samvitprakāsa are identical. TORELLA has with cantion tended to subscribe to this view, (TORELLA (1994b), p. 482, fn. 4) DYCZKOWSKI reject tended to subscribe to this view, (TORELLA (1994b), p. 482, fn. 4) DYCZKOWSKI reject tended to subscribe to this view, (TORELLA (1994b), p. 482, fn. 4) DYCZKOWSKI reject tended to subscribe to this view, (TORELLA (1994b), p. 482, fn. 4) DYCZKOWSKI reject tended to subscribe to this view, (TORELLA (1994b), p. 482, fn. 4) DYCZKOWSKI reject tended to subscribe to this view, (TORELLA (1994b), p. 482, fn. 4) DYCZKOWSKI reject tended to subscribe to this view, (TORELLA (1994b), p. 482, fn. 4) DYCZKOWSKI reject tended to subscribe to this view, (TORELLA (1994b), p. 482, fn. 4) DYCZKOWSKI reject tended to subscribe to this view, (TORELLA (1994b), p. 482, fn. 4) DYCZKOWSKI reject tended to subscribe to this view, (TORELLA (1994b), p. 482, fn. 4) DYCZKOWSKI reject tended to subscribe to this view, (TORELLA (1994b), p. 482, fn. 4) DYCZKOWSKI reject tended to subscribe to this view, (TORELLA (1994b), p. 482, fn. 4) DYCZKOWSKI reject tended to subscribe to this view, (TORELLA (1994b), p. 482, fn. 4) DYCZKOWSKI reject tended to subscribe to this view, (TORELLA (1994b), p. 482, fn. 4) DYCZKOWSKI reject tended to subscribe to this view, (TORELLA (1994b), p. 482, fn. 4) DYCZKOWSKI reject to the subscribe to this view, (TORELLA (1994b), p. 482, fn. 4) DYCZKOWSKI reject to the subscribe to this view, (TORELLA (1994b), p. 482, fn. 4) DYCZKOWSKI reject to this view (TORELLA (1994b), p. 482, fn. 4) DYCZKOWSKI reject to this view (TORELLA (1994b), p. 482, fn. 4) DYCZKOWSKI reject to this view (TORELA (1994b), p. 482, fn. 4) DYCZKOWSKI

As the Śāstra is created before duality becomes manifest, it is created before the world; ādi could therefore mean "the world of duality".

²⁰ Like saṃcaya in śivacandrāṃśusaṃcayān in 13d.

149

avadharanakarmadharaya (sāstram eva sampad), where the plural indicates the plurality of Śāstras is preferable. The ādi probably refers to the creation of diverse objects, which appear simultaneously with knowledge. 21

The construction of kevalam in 27d has not been faithfully adhered to; a literal translation would be: "It [the Śāstra], pervaded by the goddess of the [highest plane] of speech, exists unmingled (kevalam) ..."

Synonyms for "light" in the sense of the "light of consciousness", like prabhā in 25d, are used to describe the capacity of consciousness to manifest Being the substrate and content of everything manifest, prakāśa can also be translated as "manifestation" in order to emphasize this function.²² Closely related terms are avabhāsa and ābhāsa, which are often used as synonyms, but also with the connotations of objectified, manifested light.²³ Perhaps this is just a working hypothesis for those who have problems in accepting too many

In order to explain how scripture can be a direct expression of the reality that is the "light of consciousness", or in the words of the Tantra "the rays of the moon of knowledge", Abhinavagupta states in 25cd-26 that there is no real difference between light, knowledge, consciousness and awareness. Also the appearance of objects is only the appearance of consciousness. 24

27a contains the main thesis, which we have stated in advance for the sake of clarity, namely that the Śāstras are the direct expression of the "light of consciousness". 27b means that there is no use for further arguments to prove the main thesis; but it also implies that Śāstra as a means of knowledge is more valid than direct perception and inference. This is the far-reaching implication

21 Cf. also: yā saṃpat saṃpattiḥ siddhiḥ tathātvaprakāśaḥ ... ĪPV 1.1.1, vol. 1, p.18.

of Abhinavagupta's position: if the knowledge embodied in Saiva scripture is of Abhina vagarethe direct expression of the highest form of consciousness/Siva, it must be not only more valid than other instruments of knowledge, but its scope is also not only more value in dividual's contracted consciousness. It may therefore reveal to him things to which he has no access otherwise. 25

The doctrine of the four levels of the word (vāk), namely "physical" 26 (vaikharī), "intermediate" (madhyamā), "visionary" (paśyantī) and "highest" (parā) need not be discussed here. Abhinavagupta describes the increasing duality that appears in speech in terms of a division of the "denoter" and "denoted". 27 This model of the creation of Agama is alluded to in several places (e.g. 400ff) in our text.

28ab identifies the plane on which our author wishes to describe the Śāstra, the parā vāk. It also shows that the objection does not apply, because the "real" Āgama" exists on the highest level of speech and is not the text of a Tantra. 28

verses 28cd-30ab

This is a modified quotation of IPK 1.5.10f. The original reads svāminas cātmasamsthasya bhāvajātasya bhāsanam | asty eva ...prakāśo 'rthoparakto 'pi sphatikādijadopamah.29

The passage quoted here in response to the question in 24cd-25ab is the locus classicus for the definition of vimarśa and shows that Utpaladeva has already treated the same problem: it is his position that objects appear outside without their nature as consciousness being impaired, that is, the objects remain within the "I" whose real nature is unaffected. 30 But - asks Abhinavagupta in

²² Bhāskara glosses prakāśa with prākatyam, "manifestedness", Bhāskarī on ĪPV 15.11.

²³ This would at least explain why the sivatattva can be described as ultimately with out ābhāsa. Cf. ĪPV 3.1.1, vol. II, p. 190: yattadupadešabhāvanādiṣu tathābhāsumāna

^{24 &}quot;In this system the persistent existence or non-existence of things without being considered." bedded in consciousness is illogical, for [only] things that are embedded in consciousness is ness appear. And their nature as appearance is their identity with consciousness for appearance is consciousness." iha bhāvānām sattvam asattvam vā vyavaniṣthamāni sattvam asattvam vā vyavaniṣthamāni sattvam asattvam vā vyavaniṣthamāni sattvam asattvam va vyavaniṣthamāni sattvam asattvam asattvam asattvam va vyavaniṣthamāni sattvam asattvam va vyavaniṣthamāni sattvam asattvam asattvam va vyavaniṣthamāni sattvam asattvam asattv samvidvišrāntīm antarena na upapadyate | samvidvišrāntā hi bhāvāh prakājamānā bē vanti | prakājamānatā vanti prakāšamānatā ca eṣāṃ saṃvidabheda eva | prakāša eva saṃvid yataḥ | PVVvi | 1.46-s not indize p.4-5. Abbinavagupta never shows any trace of modesty, so iha [sāstre] does not indicate a relativistic position. a relativistic position, but simply the beginning of a valid doctrine.

²⁵ na hi pratyakṣaṃ māyāpramātuh sarvatra kramate, anumānam apy evaṃ, na hi yad yad asti tatra tatra lingavyāptyādigrahaṇasaṃbhavah | āgamas tv aparicchinnaprakāśātmakamāheśvaravimarśaparamārthah kim na paśyet, ĪPV 3.1.1, vol. 2, p. 186. See ĪPVV, vol. 3, p. 84: tatah sa eva vimarsa agama iti ucyate ...parokse ca arthe tasya pramanyam.

²⁶ According to Ksemarāja the otherwise unattested vikhara means "body". See Sāmbapañcāśikātīkā on verse 4 (p.4).

²⁷ For a description of the levels of speech the *Parātriṃśikāvivaraṇa* is one of the most important sources, cf. PTV, p. 4f: na hi prathamajñānakāle bhedo 'tra asphurat, yatra vācyavācakavišesayor abhedah | madhyamā punas tayor eva vācyavācakayor bhedam ādaršya sāmānādhikaranyena vimarśavyāpārā, vaikharī tu tadubhayabhedasphuṭatāmayy eva. See GNOLI (1985). For more information on the topic, see GNOLI (1959) and PADOUX (1990).

²⁸ See 800cd: "Āgama is not this collection of texts (grantha) in a manuscript" (or: "manuscripts and texts"). āgamo hi na nāmaisa pustakagranthasamcayah.

²⁹ The text of the IPK and the Vrtti thereon is quoted from TORELLA's excellent edition. Although I have used his interpretations throughout, my translation sometimes differs in order to maintain consistency of style and terminology.

³⁰ bahīrāpatayā ābhāsane 'pi ahantārāpatā na trutyati, ĪPV 1.5.10. The text is given as trans-

his introduction to 1.5.11 - the "awareness of will" mentioned in IPK 1.5.10. as indeed every form of vimarsa, implies differential thought, which, if the first as indeed every form, in the lifst proposition were true, would then exist in consciousness without differential. ang it. The solution of the Pratyabhijñā is to conceive vimarsa as a function of consciousness itself and to demonstrate that its potential to become differential ated works, as it were, only on the outside.

In one respect consciousness is comparable to things which, because of their clarity, are able to reflect objects, like a crystal, water, a mirror, 31 but the crucial difference is that sentiency, consisting in an awareness or experience of the object, is absent in them. 32

The text of 30c in Ked does not make much sense. The Jammu manuscripts provide a better reading for the suspect second kimca, and the differences between J₁ and J₂ in the last three syllables of the first pada point to a misreading there The conjecture "amarsa" accords with the source quoted above, namely Utpaladeva's Vrtti on 1.5.11, which connects pratyavamarśa with camatkāra.33

For the interpretation of this verse it has to be borne in mind that āmarša etc. is often joined to its object and describes a specific "awareness", like the "awareness of an insentient object" (ghatavimarśa), any internal sensation, as in the verse under discussion, the outside world (idam) in general, or the "I"

Taking 31cd with 32a does not make good sense. My interpretation of sphuta/susphuta as inwardly/outwardly perceptible rests on the wider

The source of the quotation in 32cd-33 is not known and the interpretation remains problematic. For sādhana in the sense of hetu, see JHALAKĪKAR (1978), s.v., no. 1.

The "first emission" had been mentioned in 18d as the highest "face", i.e. the

ultimate source for the knowledge that becomes the Agama. Here the author is ultimate source is still describing the mechanics of the appearance of the Śāstra in analogy to the phenomenon of cognition.

verses 36-37

upadhi is here used in the sense of upādhi.

It seems that it is only for the sake of theory that we have to assume religious practice (samācāra³⁵) even there. The adjective "extraordinary" emphasizes the same point: whereas in the different layers of the Trika there is either injunction or prohibition of certain practices, this "extraordinary" practice is not defined by a method and a goal (upāyopeya); it is a practice that cannot be specified, but is demanded by the structure of the system. Further "down" in the creation of the Sastra the limitations superimposed on the pure expression of knowledge will result in specific religious practices, but in analogy to the description of an undivided, albeit differentiated reality, the highest Śāstra too cannot be free from all forms of religious practice. This is the result of Abhinava's notion of a supreme all-inclusive non-duality that is not even devoid of

The descent of the Śāstra is accompanied not only by an unavoidable process of abridgment, but also by the creation of non-essential doctrines that are then rejected in the scriptures of greater "essentiality", the genre of Sāraśāstras. 36 Here lies an inconsistency in the system which may explain why the beginning of our text is so cautiously abstract. In order to produce non-dualistic Śāstras which are only conceivable as the antithesis of dualistic doctrines (see below) - the dualistic scriptures have to be created first. But then the sequence will not tally with the present description that starts from the highest reality, in which non-duality prevails, to more differentiated levels. For Abhinavagupta this is not an issue: the state just described is the higher Trika that is really beyond concrete scripture with religious injunction. For the actual definition of the inclusive non-dualism of the Trika he has to wait until the lower levels are created. An adherent of the system would certainly deny the charge of inconsistency, as he would argue that all levels of reality are simultaneously present and that the description of earlier and later does not apply to time, but to ontological planes. For the historian this means that this peculiar non-dualism presupposes a fully blown, and probably influential Siddhanta.

¹¹ That is Abhinava's interpretation in the Vimarsini: sphatikasalilamakurādih, vol. l. p. 198. Abhinavagupta's substitution of sphatika, "crystal", with ratna, "gem", is metrically metavated and does not imply a new meaning.

³² See TORELLA (1994a), p. 118, for Utpaladeva's own commentary.

⁴ Cf. JPV (1.1.1, vol. 1, p. 18), where *sphutatara* is used for describing the appearance of our side objects, solvers, side objects: sphutatarabhāsamānanīlasukhādi-.

³⁵ The word is used also in 41c, 290a, 366a.

³⁶ One example of such a scripture is the *Vijjīānabhairavatantra*, which rejects as provisional the factors of the scripture of the scripture is the scripture in the scripture of the scripture is the scripture in the scripture of the scripture is the scripture in the scripture of the scripture is the scripture of the scripture of the scripture is the scripture of the scripture the forms of the deity taught in other Trika scriptures. See SANDERSON (1990b), p. 74-6.

verses 38 39

The diversity of Sastras will be explained later as arising through the influence of the five powers, which are identified with Siva's five faces. Here the word "three" (39d) indicates that we are still in the realm of the Trika.

One problem arises with the introduction of a "vyaktisthāna". On the level of the comparison one could understand vyakti as "reflection" in an object like water, but this is not what Abhinavagupta means. In his doctrine there is no external entity, in which the knowledge could be reflected and differentiated rather the objects are manifested by the same consciousness that is the source of the Sastra. To say that in the course of creation and differentiation knowledge is also differentiated means that these processes occur simultaneously and that there is no influence of the lower on the higher. The use of the word upādhi in the next verses seems to contradict this, but the issue is clarified in 200cdff.

verses 40-41

The monistic model of creation maintained in this system is expressed here in an allegory: Bhairava is the ocean, his "floods" are the "objects". The continuous upsurge of the ocean is compared to Bhairava being in a state of "increase", which is here synonymous with the "swelling up" (ucchānatā) that has to take place before creation can be "poured out" (visarga) and is preceded by volition implied in the desiderative. The word brightiah in 40d prepares the reader for the five brahmans mentioned below.

By indicating the possibility of a "slight practice" the author is descending only a little in terms of the hierarchy of cults. The terminology (cf. visarga) suggests that we are still dealing with the Kaula.

verses 42-45

tat in 42a stands for bhāvāh (40c).

In this passage the transition of Śiva being the proprietor of his power to a state of identification with it is described, and this marks the Kaula form of wor ship. The identification of this emission with "enjoyment" (bhoga) in 44 under lines this. 37

In Abhinavagupta's Trika the "kula method" (kulaprakriyā) is a higher and more effective level above the ordinary "tantra method", 38 and is reserved for the specially qualified. This "secret" method (rahasyavidhi) 39 aims at perceivthe specially damanifestation of Siva's power and at shedding all things as essentially a manifestation of Siva's power and at shedding all ing all things a inhibitions $(sank\bar{a})^{40}$ produced by birth in a particular social position $(j\bar{a}n)$ etc. inhibitions (this freedom lies in transgressive practices like drinking alcohol, 4). The way to this freedom lies in transgressive practices like drinking alcohol, 4). or whatever one thinks fitting. 42

I cannot quote a definition of the "practice of consciousness" that is mentioned in 45a, but it is used here to describe what is otherwise called advaitaand vāmācāra: "For the Trika this distinction between dualism and nondualism was also reflected in ritual and observance. The religious practice of the Siddhānta was dualistic (dvaitācāraḥ) in the sense that it accepted the orthodox (Vedic) distinctions between the pure and the impure and remained strictly within the boundaries of the former. The Trika, by contrast, advocated the practice of nonduality (advaitācārah) in as much as its rituals involved contact with impure persons and/or substances. [...] this orthopraxy and heteropraxy are characterized in our sources as right (dakṣiṇa-) and left (vāma-) respectively, where right is that which agrees with orthodox norms and left that which goes against them [...]".43

verses 46-47

From TA 27.6 we know that the passage is quoted from the Sarvajñānottaratantra, 44 which survives in a fragmentary old Nepalese as well as in south-Indian manuscripts. 45 The quotation refers to the Kaula worship, where Siva

41 This is in conscious transgression of the rules of purity. See SANDERSON (1995), p. 80, for the legal implications.

³⁷ Cf. MVT 19.100–101: bhuktvā yathepsitān bhogān yāty ante paramam padam lity gurī kuthus lefar, kantu kathato lesar kauliko vidhir uttamah ||100|| yoginām sarvasiddhyartham kulamārsasi

³⁸ Cf. SANDERSON (1986), fn. 2.

³⁹ Described in TÃ 29, which is based on MVT, chapter 11.

⁴⁰ Cf. Tantrāloka 29.5; tathātvena samastāni bhāvajātāni paśyataḥ | dhvastaśankāsamühasya yāgas tādṛśa eva saḥ | and Jayaratha's gloss: tathātveneti śivaśaktisphārasāratayā.

⁴² TA 29.6ff. This seems to be an already spiritualized interpretation of the more legalistic injunctions to drink alcohol at every yaga. For the quotations adduced by Jayaratha on Tantrāloka 29.11-13 betray a different spirit: the drinking of alcohol is a vidhi, on the transgression of which expiation is necessary. It is only in emergency (āpad) that a more infrequent use of alcohol can be justified, at parva-days or once a month, but after one month without alcohol one becomes an ordinary being (paśu). We can conclude that the adherents of the Kula were not libertines, but in some respect guided by the same principles as are the adherents of the Vedic religion: their socio-religious position seems to have been invariably connected with a certain practice (ācāra), the non-observance of which must eventually lead to a loss of this status,

⁴³ SANDERSON (1995), p. 17f.

⁴⁴ See GNOLI (1972), p. 889, for other quotations of this text in the TA.

⁴⁵ See SANDERSON (1992), p. 889, for other quotations of this text in the EAS See SANDERSON (1992), p. 291, Dominic GOODALL has kindly supplied me with the numbers of the control of t bers of the transcript and manuscripts in the École Française d'Extrême Orient, Pondi-

is surrounded by a group of eight "mothers". 46

In this context we cannot ignore the problematic passage in the PTV, where Abhinavagupta says that the "goddesses of the senses" (karanadevatā), which Abhinavagupta says the sun of Siva, 47 "are described in the scriptures are like rays emanating from the sun of Siva, 47 "are described in the scriptures of the Mata etc. as the retinue of Lord Bhairava."48

Immediately preceding this section is a description of another pantheon of five deities that is derived from the Krama: khecarī, gocarī, dikcarī and bhūcarī, which are emanations of vyomeśvarī. 49 Abhinava's treatment is however, anomalous, because he has to adapt the terminology to the verse of the Tantra he is commenting upon. In his commentary khecarī is the highest, of which all others, i.e. vyomacarī, gocarī, dikcarī, and bhūcarī, are emanations. 50 Provided that we accept the Paryantapañcāśikā as a work of Abhinavagupta⁵¹ the following verse from this work would prove that he also accepted the ordinary sequence: "Plunging into the great lake, into the consciousness of the self that is vyomeśvarī, who is full of the four vāhas, i.e. the streams of khecarī etc., one should submerge the insentient world."52

What is remarkable in this section of the PTV is that there seems to be a conflation of two pantheons: some of the statements and quotations point to the series of eight mothers, 53 others to the Krama deities already mentioned. I suppose that the ambiguity is deliberately not resolved to suggest that, although the Krama deities are mentioned, our author did not want to follow the Śākta Krama with a purely female pantheon, but integrated it into the Kaula or Mata with Siva at the centre. He does so by showing structural similarities rather than

cherry: T 334, 83, 985, 496, 760 (Sarvajñānottara); RE 108716 (Sarvajñānottara, Jilineand Yogapāda). 47852/47818/47828 Sarvajñānottaravṛtti of Aghorasiva.

51 The editor RAGHAVAN does not question the attribution on the strength of the Guinniches paramarsa, but the work bears no formal imprint of our author such as an allusion to his teachers, the mention of his name and the like. This might not weigh much for a small well. but in the case of an author who even dated Stotras, some suspicion is appropriate

12 bbccar sodicatuhsrotovahapurnam mahahradam | vyomeśvarim atmacitim vigalna bods

The passage quoted above mentioning Siva's parivāraļi and the quotation from the Malini tantra in Parātrimšikāvivarana, p. 43.

by trying to connect unequal numbers: the set of Krama deities are described on a psychological level as personifications of deluding states of mind like "lust". a psychologist and the flust, "anger" etc. 54 This "inequality" of the states of mind is samsāra and therefore nothing but an ignorance of reality. The Kaula set of deities can be described in very similar terms: their activity binds the soul even closer to samsāra as long as their true nature remains unrecognized; if recognized, they grant liberation in life. 55

The same passage from the Sarvajñānottara is quoted in TĀ 27.6 in a different context, 56 but pointing to a similar interpretation. There the use of mantras from the "higher" scriptures in the installation of outer idols is forbidden, because these mantras can only grant perfection (siddhi), if they are used secretly and internally; outside they might be even dangerous. This is explained by Siva's lust for enjoyment and by alluding to the negative consequences for the worshipper, who fails to comply with it;57 the same quotation from the Sarvajñānottara is then adduced as a scriptural support. Here the desire for enjoyment, which is more readily connected with ferocious deities, ⁵⁸ is projected onto Siva. In the Vārttika the quotation has been adduced for similar reasons; the concept of enjoyment as a source of liberation, which was mentioned in 45, is explained in an admittedly oblique way through the quotation: if the desire of the deities is gratified through enjoyment, they grant perfection, or liberation. 59

56 uktam jñānottarāyām ca tad etat parameśinā | śivo yāgapriyo yasmād viśeṣān mātṛmadhya-

57 Cf. TĀ 27.4-5.

59 We can distinguish many aspects of this structure, a ritual one ("outside" deities are gratified by forbidden substances), a gnostic one (their nature is recognized), and one of internal ritual (inner experiences are the offering) which forms the bridge between the other two.

⁵⁴ saiva khecarī kāmakrodhādirūpatayā vaisamyena laksyate | PTV, p. 40.

⁵⁵ aparijñātasvarūpāś ...sāmsārikapāśyapaśubhāvadāyinyah | ...jñātasvarūpās tā evoktayuktyā jīvanmuktatāpradāyinyah | PTV, p. 43f. This might have been the inspiration for Pratyabhijñāhṛdaya, Sūtra 12 and 13, which also connects both pantheons. The proximity of both sets of deities is also indicated in the anonymous quotation in TAV on 29.16.

⁵⁸ They are described as "desiring to devour" (Lit.: "lick") (lelihāna glossed as bhoktum ekāgra by Śivopādhyāya, see below), for instance in Mahānayaprakāśa (TSS) 7.142: tato pi väsanärüpapuryaştakavilāpanāt | mahāvilayarūpatvāl lelihāneti kathyate ||. The word occurs in Vijñānabhairavatantra 77b, interestingly in a metrically wrong passage (bhavipula without a preceding ra) and is, together with rerihāṇa attested as a name of Siva. Harunaga Isaacson informs me that rerihāna, which is known to the dictionaries only from lexicography, actually occurs in the Ur-Skandapurāna (14.19c) being edited at present by ADRIAENSEN, BAKKER and ISAACSON.

verses 48-49

I took the construction -viyojane ...upāśrite as a dual. The other possibility would be the locative of a samāhāra-dvandva.

The two verses sum up the creation of the Śāstra in order to answer the question raised in 24cd–25ab. As the differentiation inside consciousness becomes more complex, the expression of knowledge is objectified as the Śāstra and descends finally to the lowest level of human speech. Thus knowledge is reduced to differentiated doctrine that eventually crystalizes in a text. The formulation of this process sounds rather complicated and the reason for this is probably an interpretational inconsistency: in order to maintain his monistic standpoint the author has to disguise the more straightforward doctrine that the knowledge "that has its source in the lotus of Śiva's face, though one, becomes manifolds, as it resorts to objects." On This model works in the Siddhānta, where the world and Śiva are divided, but it has to be reinterpreted, if the Śāstra and the world are created by the same process, if, in other words, Śiva is the direct source of the limitation.

Section 5 The Five Powers

Up to this point the author, by mentioning only three powers, had suggested that he was dealing with levels within the Trika. Applied to the hierarchy of the Śāstra the introduction of the five powers of Śiva marks the transition to the theological realm dominated by the Siddhānta. As explained in the introduction, the pentad of faces or mantras is a pan-Śaiva doctrine used in the Siddhānta for the legitimation of its own hierarchy of the Āgamic canon. The Trika-Śaivas could not alter this structure without coming into contradiction with scripture itself, but the aim was never to render the Siddhānta completely invalid, to remain in control of the whole Śaiva revelation it was crucial to include it as a lower level. The most natural solution was therefore to find a scriptural passage that would back up the claim for an extension of the fivefold structure (160) and to demonstrate that the pentad is only a further differentiation of the Trika (393).

verses 50-51

It is interesting to note that the pentad of powers is deduced from this less than obvious passage in the MVT, because our author, despite all claims that "everything is in the Mālinā", does not slavishly adhere to this Tantra for quotations, and the same doctrine could probably have been obtained more easily from elsewhere. If this is not just accidental we ought to conclude that Abhinavagupta wanted to demonstrate that the scope of the Mālinā was not limited to the higher levels only, but was capable of including also the pentadic structure of the Siddhānta's Sadāšīvamūrti.

The pun with prapañca/pañca is probably the reason for the inverted position of some of the words in this quotation. The text of the original runs as follows:²

That this pentadic structure is Siddhānta-orientated is proven by the fact that the upper face (Iŝāna) is reserved for the Siddhānta Āgamas, See Introduction for details.

² This is quoted from Somdev VASUDEVA's forthcoming edition of the text. GNOLI reads-paryena for -parvena in his translation of the MVT and the TÂ (GNOLI (1972), p. 355 and p. 791) (= J₁'s reading), but this must be just a misprint. The transmission of the text of

savyāpārādhipatvena taddhīnaprerakatvatah ||2.34|| icchānivṛtteh svasthatvād abhinnam api pañcadhā | iti pañcātmake bhede vijñeyaṃ vastu kīrtitam ||2.35||

It is also quoted in the Tantrāloka 10.185 for a different pentadic structure:

[Commentary] "If each one of the lower forms merges into the preceding, it would give up its own nature. As a consequence there would not be any place for the fifteen[fold nature of the perceiving subjects up to mantramahesvarah]. To this objection he replies:

[TĀ] This has been prescribed by the Creator in the Śrīpūrva[śāstra, i.e, MVT].³ for he proclaims that the nature of the states of waking etc. correspond to his being equipped with activity (vyāpāra-), with sovereignty (adhipatvam) etc. Although Śiva is undivided, [this division] is due to his subtle inner knowledge.⁴

In his commentary, Jayaratha quotes the full verse from the MVT and indicates a correlation between the five states of consciousness and the five principal powers:⁵

MVT	śaktih	avasthā
savyāpāra-	kriyā	jāgarā
adhipatvena	jñānam	svapnah
taddhīnaprerakatvataḥ	icchā	sausuptam
icchānivṛtteḥ	ānandaḥ	turyam
svasthatvād	cit	turyātītam

As we shall see later, other pentads could be added to this structure.

5.1 The Nature of Time

The question in 52 provokes a long digression on the relation of manifestation, cognition and time. The author tries to come back to the main topic in 125 but succeeds not before 133.

One of the important points of Abhinavagupta's doctrine is what we could all a gradual transition from nonduality to duality. To indicate the intermediate (bhedābheda) state, the term "differentiation" has been used instead of "division". Simplifying the matter slightly one might say that "differentiation", which does not entail duality, is a process inside consciousness, whereas duality entails a projection of the already differentiated content to the outside.

At this point in the discussion we are still in the intermediate state⁶ and the pentadic structure is therefore without the corollaries of duality like time and space. This is, however, difficult to believe for the opponent, who counters by eliciting a clear statement from our author. Abhinavagupta can only agree and is then confronted with the fact that he has already used divisions of time.

verse 53For the identification of the deity Kālī with time, see TĀ 6.7:

[Commentary] If the whole universe appears only as merged in consciousness, as its appearance cannot otherwise come about, there is – because of its eternity – no connection of consciousness with time. How can on the other hand [be explained that time is connected] to a group of things which is inseparable from it [consciousness]. To this he responds:

[TÅ] In its highest form 7 time, being of the nature of sequence and non-sequence, resides in consciousness. It is called $k\bar{a}l\bar{t}$ and is the highest power of God. 8

the MVT and the TA is unambiguous and only the -tva, which governs both parts of the compound, can be correct.

³ Opinions as to how the compound śrīpūrva is to be understood vary: the "glorious first", or "one whose name starts with śrī".

⁴ nanv adharādhararūpam pūrvasmin pūrvasmin rūpe nilīnam sat svarūpam eva jahyād iti, tatrāsya niravakāsaiva pāncadasyādišanketyāšankyāha "etat ca sūtritam dhātrā śrīpūrve yad bravīti hi | savyāpārādhipatvenetyādinā jāgradāditām ||10.185|| abhinne 'pi sīve 'ntahsthasūksmabodhānusāratah |"

⁵ ity atra sivasya savyāpāratvena kriyāsaktipradhānā jāgarā | adhipatvena svasvātantryād asādhāranatattatsṛṣṭimayo jñānasaktipradhānaḥ svapnaḥ | jñānakriyābhyām hīnenaudāsinsapracyāvātmanā prerakatvenecchāpradhānam sausuptam | eṣaṇīyapāmatayā tannivṛṭtyāpy ānandasaktipradhānam turyam | nirānandatayā sarvasarvātmakaparipīmasvarūpavisrāntes cicchaktipradhānam turyātītam iti pañcāvasthātmakatvam ity arthaḥ |

⁶ Verse 49 was an exception, a leap forward to duality in order to answer the introductory question.

⁷ GNOLI proposes to read sarvaḥ with one manuscript for paraḥ, but I tend to think that Abhinavagupta, while identifying Kālī with the highest power wants to make the point that this form of time is not equivalent to the tattva of the same name, and have therefore retained paraḥ.

⁸ nanu sarvam idam jagat saṃwillagnam evāvabhāsate 'nyathā hy asya bhānam eva na bhavet, saṃwidi ca niṭyatvāt kālayogo nāsti, iti katham asau tadanuṣaktasya bhāvajātasyāpi syāt | ity āśaṅkyāha "kramākramātmā kālaś ca paraḥ saṃwidi vartate | [...] kālī nāma parā śakiḥ saiva devasya gīyate ||7||"

CI, satra ca idam evam atra idānīm ityādibhedakalanā na kācit PTV, p.5. There [in the first moment] the construction of division as [evident in] 'this'. 'so', 'here', 'now' etc. is absent,"

After forcing the author to admit this problematic point, the pūrvapakṣa has no difficulties in showing that the differentiation inherent in this account of the evolution of the Sastra had presupposed the concept of time from the very beginning. In the first verse of the commentary itself (15c) he has used prāk to describe the highest state, in 19c he refers to a future division, etc.

samafīrsikā is attested in Rājataranginī 3.135 and means "Gleichstellung" according to the PW.

nilam saroruham needs some explanation. Following the more usual sense of the word we would have to translate: a "blue lotus". 9 Ratnākara@anti while commenting on the word nīlapankaja in Hevajratantra 1.3.7, says even more bluntly: paikajam utpalam. 10 In fact blue lotusses are known only to poetic imagination, 11 but a fictitious poetic convention would not serve the argument in our text. It might be argued that to the mediaeval Indian mind poetic conventions were not unreal, 12 but in our case the solution is, I think, much easier. There is a definition in the Amarakośa, perhaps not used too often by classical authors, which gives nīlāmbujanma as a name of the blue water-lily (nīlotpalam). 13 In other words ambujanma, and probably also other words formed by synonyms (ambhoja, saroja etc.), can exceptionally be used

9 One might argue that the etymological meaning of saroruha could accommodate all sorts of aquatic plants, but the meaning established by usage (rūdhī) is that of a lotus (Nelumbo nucifera gaertneri) and not of a water-lily (Nymphea stellata etc.). See RAU (1954).

for "blue water-lily", if the colour is stated to be blue. 14 The logic behind this for "blue water my for that no blue lotus exists in nature and that therefore no ambiguity can arise. 15

5.2 Light as Knowledge

This passage is preliminary to the discussion of time that follows in the next section.

verses 58-59

The translation of prasāda in 58d is confirmed by the similar phrase (prakāśānugraha) in IPV 1.5.2 (vol. 1, p. 155).

In other words, if a cognition different from the light of consciousness would be required to know the light, then this knowledge would imply a light different from the first one to become manifest, and so on. It follows that one has to assume identity of light and cognition in order to prevent the logical fault of

verse 60

The similar aprathātmakam occurs in TA 1.26, where ignorance is defined not as the absence of knowledge, but as incomplete knowledge: "Therefore a knowledge that does not consist of the complete manifestation of a reality to be known, is ignorance [...]." 16 In combination with -ātma- the ka-suffix in 60c does not modify the meaning (svārthe) and I assume the same for the one in aprathamānakam.

The verse under discussion contains a succinct allusion to the discussion of perceptibility in the Trika, which is a response to the Mīmāmsaka doctrine of "manifestedness" (prakatatā) understood as a quality of objects. 17 An extensive treatment of this controversy is given in the chapter on vastudharma in

¹⁰ Quoted from a draft edition of the text by Harunaga ISAACSON.

¹¹ Thus RAU (1954). In SYED (1990) ROXBURGH is quoted, who says he has not come across a blue Nelumbio in "these parts of Asia", but that it is said to be a native of Persia etc.

¹² Rajasekhara states that poetical conventions are not untrue, but facts from a different time or of remote places, which entered the language through the old masters who travelled the world. purve hi vidvāmsah sahasrafākham sāngam ca vedam avagsha. süstrüni cüvabudhya, desüntarüni dvipüntarüni ca paribhramya, yün arthün upalabba prantiavantas tesam desakālāntaravasenānyathātve 'pi tathātvenopanībandho yahsa kas-

¹³ syad utpalam kusalayam atha nilambujanma ca | indivaram ca nile 'smin site indiv dakairave, Amarakola, Vārivarga, vs. 37. "kuvalaya is a water-lily of any colou (utpala). sillembujanma as well as indivara are used for the blue [variety], kumuda and kairana far

¹⁴ SYED assumes a "rare blue lotus" to avoid contradiction, but her source for the identification is, as far as I can see, the Śabdakalpadruma, which mentions nīlāmbujanma as a synonym for indivara. As we have seen, this does not mean that indivara can come to mean "blue lotus", but that nīlāmbujanma can irregularly be used for "blue water-lily". See SYED (1990).

¹⁵ This observation can perhaps reconcile us with Indian poetry, whose lack of natural realism RAU laments in his famous article on lotusses.

¹⁶ ato jõevasya tattvasya sämastyenäprathätmakam | jõänam eva tad ajõänam [...] 17 Jayaratha identifies the opponent's side as kaumārilam matam (TAV 10.21) and sabara-mata crāss side as kaumārilam matam (TAV 10.21) and sabaramata (TAV 10.57). According to him, there is a difference between the two sub-schools

TA 10.19ff and IPV on 1.5.2, where Utpaladeva had stated that the object, in order to be perceptible, must consist of light. But it is not possible to account for the process of sensory perception only by supposing a "light in the object", i.e. the object's manifestedness, because then all objects would be manifest to everyone all the time. Abhinavagupta brings out this criticism levelled at the Ksanikavadins and the Mīmāṃsakās by Utpala ¹⁸ and says:

The same fault is to be found in the [Mimāṃsaka] doctrine of 'manifestedness'; if [as in their doctrine] the light is completely merged with the body of the object, then the existence of light as connected to the perceiver, as in [the perception] 'the light is manifest to me', is difficult to account for.¹⁹

Needless to say, this is not fair to the Mīmāṃsaka theory of perception, which, at least in sophisticated accounts, supposes two 'lights', one inside and one outside, i.e. belonging to the perceived objects themselves, both of which meet in the process of perception. ²⁰

on the following point: the Kaumārilas hold that 'manifestedness' resides in the object, for the Prābhākaras it resides in the conscious subject (prakaṭatārthagateti kaumārilāḥ saṃoviṭpramātṛgateti prabhākarāḥ, TĀV 10.58ab).

18 See TORELLA (1994a), p. 112: "In formulating the Saiva position, Utp. is implicitly critical particularly of the Buddhist and Kumārila thesis ...For Kumārila, on the contrary, an added quality, 'being manifest' (prakatatā) occurs in the object, from whose presence a former cognitive act is inferred. In both cases the light is not separate — as Utp. also maintains but it is found, so to speak, completely resolved within the object [...] According to Utp. there is an illumination of the thing (whose essence is light) by the light of the subject."

19 prakatatäväde 'pi ayam eva doşaḥ, sarvathā arthasarīravisrāntaḥ cet prakāso mama avabhāsate iti pramātrļagnatayā prakāsasthitiḥ durupapādā, IPV 1.5.2 (vol. 1, p. 155f).

20 Cf. Mänameyodaya, p. 10f.: "cakşur näma kanınıkäntargatan tejo ..." atra cakşubśrotrayoh prāpyakāritve vivādo 'stīti tayor api bahirindriyatvāt tvagādivat prāpyakārinsan sādhanīyam | tataš ca cakşuşah pṛthutarapṛthivīdharādidaršanāt pṛthwagravam api tejobsyabhāvasidaham āsrayanjvam | tathā unnilanakṣana eva daratarašanaiscarādidaršanād vvāpyāvasthitena bāhyatejasā nirgamanasamaya evaikībhāvah kalpaniyah | na ca bāhyatejasah sakalavyāpitvāt keralebhyo 'pi gangādaršanaprasangah | adṛṣtopagṛhītenaivālokabhāgenaikībhāvāt |

Here, in the case of the eye and the ear, there is a difference of view in regard to functioning by reaching to the object. So, they too being external senses, like the sense of touch, etc. it has to be made out that they too function by reaching the object. And again, since the sense of sight perceives mountains, etc. which are much larger, we have to acknowledge for it, as extended field of light at the end, which is made out as the nature of light. Similarly, since just at the moment of opening the eyes, Saturn and other very distant objects are perceived in has to be assumed to become one with the pervasive external light, even at the moment of coming out. Nor does there result the possibility of seeing the Gangá from Kerala for the reason that the external light is all-pervasive; because, it becomes one only with that part of the light which is taken hold of by some unseen potentiality." (Raja and Sastri's translation)

The discussion in the Tantraloka is too long-winded to be reported here. ²¹ but the outcome is a deconstruction of the subject and object of knowledge: on the outside there are no real objects, only a manifestation of light which is identical with consciousness, and on the inside "there is no definite subject in the act of knowledge ..." (67ed).

5.3 The Nature of the Light of Consciousness

verses 61-62ab

This sums up the discussion of time and states why even objects cannot be divided by time. The reason is the identity of everything with light which is described in the next section. As 84 will show this is a further argument to tackle the question on time (54).

verses 62cd-63

This is part of the solution for the problem of omniscience in the Pratyabhijñā: there is no external light that is responsible for manifestation, but only a light of the subject that manifests objects. Further arguments will follow in 70cd-74.

verse 64

See 631 for this suspected use of sarana for "[doctrinal] refuge".

Cf. ĪPV 1.5.2, vol. 1, p. 155 (iti andhatā jagatah), for the metaphor of darkness,

verses 65-66ab

Here another argument is adduced for the identity of objects with light and the logical impossibility of the object being anything else by nature. In other words, the object, its manifestation and its knowledge cannot be distinguished. ²²

In the Pratyabhijñāhṛdaya Kṣemarāja quotes a line from one of his own, otherwise unknown Stotra:

²¹ It deals, for example, with the interpretation of the phrase "object-light" (arthaprakāša). namely whether it should be understood as a subjective or objective genitive, with a causative meaning, whether a metaphorical meaning is involved here, under which circumstances metaphors can be used at all, etc.

²² See TORELLA (1994a), p. 111, note 5, on the Buddhist doctrine of sahopalambhaniyama as the background for this concept.

If non-appearance does not appear, only appearance remains. [But even] if it does, only appearance remains, as [an appearing non-appearance] is of the nature of appearance. 23

verses 66cd-68ab

The pūrvapakṣa maintains that this theory of manifestation as the concrete universal does not exclude the possibility that an object could exist in an unmanifested state prior to its appearance. The light would then only add objectivity to a preexisting object. In this context the phrase in 67a means: "This is a theoretically valid position".

verses 68cd-70ab

Here light or manifestation is identified with Siva in the sense that Siva is the reality of everything that appears. This is not just the religious background of a philosophical concept; the description of his "inconceivable power" also tries to silence all questions about the mechanics of the process of manifestation; his "movement" is a playful manifestation of diversity. ghūrni, literally "staggering", is a technical term derived from the Mālinī for describing one of the five stages in body-centred meditation. During this meditation one who is about to enter the reality of consciousness perceives a kind of bliss (ananda), due to contact with the plenitude of consciousness. Then there is the phenomenon of internal "sudden ascension" (udbhava), "trembling" (kampa) and finally "sleep" (nidrā), which lasts until one enters consciousness itself. The actual realization of the plenitude of consciousness is marked by "reeling" or "staggering" (ghūrni), as one is no more aware of the body as belonging to the I, but of everything as being included in consciousness. 24 In the same passage Jayaratha connects the word ghūrni to the vibration of consciousness (spanda) and in 69d this is probably what is meant by ghūrni. But the choice of words could also be seen as an attempt to identify the sober philosophy of manifestation with the sensuality of a Kaula deity. In order to emphasize this aspect we might translate the compound svātantryoddāmaghūrņitah as "intoxicated (uddāma) with his autonomy and [therefore] staggering".

verses 70cd-74

If Siva manifests as all reality, then it could be argued that his omniscience

should also be present in manifestation. This is, however, disproved by ordishould also be properly and only experience, where we see a diversity of knowledge. The problem is related to the argument on "manifestedness" and omniscience. 25

A variety of these so-called 'reflections', or articulations of awareness (vi-A variety of awareness (vi-marśa) are then quoted ²⁶ with the intention of showing that manifestation and marsa) are the corresponding knowledge can be differentiated into time, subject and obthe correspondence and object, or can be completely undifferentiated up to the point, where subject and object are identical and form only one reality. The point of 73e is of course that the light of manifestation is necessary even for the Buddhist in order to speculate on the self's non-existence.

verses 75-76

I suggest splitting the sentence with the caesura and taking kaś cit with eka, The translation "single thing" for the masculine pronoun may seem odd at first sight, but the ekah is used together with asah.

It seems that the opponent has not yet accepted the idea that the "light" is able to project contents and that categories like subject, object, time etc. are no more than such contents. The question refers to the "reflections" mentioned in the preceding passage, which seem to entail a division of light into subjective and objective. He probably means to say that if there is a subjective light which is not aware of an objective light (as in "I, Caitra, do not perceive the cloth"), there cannot be just one light.

The reader who has reached this point is relieved by a piece of realistic classroom dialogue. It seems that Abhinava never misses an opportunity to lament the stubbornness of his disciple, who is still not willing to relinquish his "materialistic" interpretation of "light" in favour of the all-inclusive, mystical Sivalight.

verses 77-78

The opponent tries to show that this theory of one light is untenable, as the diversity of things could not be accounted for: the difference between objects would become blurred.

The main line of argumentation adopted by the opponent in 78cd is a reassertion of the concretistic interpretation of prakāśa: there cannot be just one

²³ akhyatır yadı na khyati khyatir evävasisyate | khyati cet khyatirüpatvät khyatir evävasisyate | khyati cet khyatirüpatvät khyatir evävasisyate | khyati sisyate | Pratyabhijñāhṛdaya, Sūtra 4, p. 10. The verb khyā suggests the identity between "appearance" and "knowledge".

²⁴ See TA 5.100cd-108ab.

²⁵ See commentary on 60.

²⁶ There is no indication in the original of how to split the single statements. My attempt is perhaps not the only way, but lends some logic to the sequence. In 71c one could consider reading the could be reading to the sequence of a new reading the sequence of a new reading the sequence. reading patam (suggested by TORELLA), iti in 71d seems to mark the beginning of a new set of trans. set of 'reflections' modified by time.

light, even with a multiple nature, if separate objects are manifested. Our author phrases a similar objection in the IPV: "If everything manifests only through the nature of pure light, then everything would manifest at the same time and the night of a pot would be [identical with] the light of a cloth. In this way nothing

For the phrase vāgjāladambarah, cf. PTV, p. 38: iti kim aparena vāgjālena.

The verse could answer the objection to the unity of light in two ways. (a) The light can be only one, as it resides in the one self. (b) The individuality of perception is secured by the fact that the light is received by the intellect (buddhi) of the individual. In the second interpretation svātma does not mean "the one self", but "one's own self".

This verse is identical with the author's Bodhapañcadaśikā 8. It sums up the discussion on the nature of prakāśa by defining the "inert", the objects, which seem different from light, as delimited light. Knowledge or consciousness is, so to speak, the same substance, but without limitations.

In other words, once it is understood that it is the nature of light to become manifest, there is no point in discussing the "light of the objects".

An even more dramatic attempt to avoid further objections. The second line could also mean: "are like protecting the chastity of a woman who had sexual relationships with everyone".

verse 83

Although the main idea in this sentence - namely to proclaim light as the fundamental reality, which makes even our doubts about it possible and without which even "darkness" could not be grasped - is not in doubt, the word division is intricate. Each kim (except in kimcid) has to be taken as an interrogative particle and 83c has to be read as one sentence.

As so often in this compact style, the compound in 84ab has been understood As so offer an adjective supplying the cause (hetau višesanam). The "even" emphasizes as an aujection and above in the definition of the "inert" and the "conscious": in the the point in the unstructured subjective consciousness an influence of time is out of the question, but even in the solidified light of objective reality time has no hold.

on, but the one of the one of the original or original ori not "acquire" identity with the light.

verse 85

hanta could describe a variety of emotions in a heated debate, but here it is either a disciple in despair or an opponent in exasperation. 28 The opponent had raised the same question in verse 54 and is still not convinced.

nirbhajya, from the verbal root nirbhañj, means "by breaking it up into pieces".

GNOLI translates this verse as follows: "L'unica cosa che esiste è la luce che si manifesta sotto forma di tutte le cose. Questa luce non appartiene a nessuna entit... da essa distinta ma solo essa esiste."29 I would suggest that 86c summarizes the position that there is no object to be illumined.

This verse recapitulates the active aspect of the light by according it an autonomous will. It is also an attempt to join the main discussion, which we had left shortly after introducing the fivefold structure of the universe (50-51). Having dealt with objections concerning time and a discussion of the nature of prakāśa, we now proceed to an identification of the fivefold structure with the five powers of Siva starting with the icchāśakti.

verse 88

This definition of ananda introduces another aspect of the autonomy of the light. As there is nothing different from it, it can only rest in its own nature, and this is at the same time the definition of the bliss of God.

At this point, however, bliss is only described as one of Siva's powers. There are different forms of bliss in Abhinavagupta's Trika, defined as stages of rest

²⁷ sa ca prakāšamātrasvabhāvatvenaiva yadi višvasya prakāšah, tarhi višvam yugapad est prakāšeta, ghataprakāšo 'pi pataprakāšah syāt – iti višvam saṃkīryeta |, IPV 1.2.8. vol. l. p.74.

²⁸ hanta is glossed by Jayaratha with sākrośam (upadiśati), TĀV 35.7. 29 Verses 86–93 are translated in GNOLI (1979), p. 56f

(viśrānti) in different forms of the life energy (prāṇa, apāna, etc.), and as cor-(visranti) in different to relating to other states of consciousness, like waking, sleep etc. and the signs

The word jagadānanda is mentioned in MVT 1.1 and eventually leads to a discussion of the stages of bliss in the second Kāṇḍa of the MVV (20-40).30

verse 89

This verse which describes again svātantrya/icchā may appear to be repetitious, but it introduces the aspect of manifestation (bhāsana) that is needed for the definition of krivā in the following verse.

verses 90-91

I suspect that the feminine bhāsanā is used deliberately, in order to emphasize the aspect of power, and take it to be an otherwise unattested variant for

One important sense of kalanā is "differentiation". 31 But my translation follows the exegesis of the root in the sense of projecting (kala ksepe) given in TA 4.174a; "'projection' means the division of one's own self." (svātmano bhedanam ksepo)32 The sense of the verb pravibhaj, "to divide" or "to separate" emphasizes this meaning of kalanā and is therefore implied in the translation of kalanā. To be more literal ("through which the self-differentiation ... is separated") would indicate two processes, a self-differentiation and its separation, but I cannot see how this could be intended here. It is true that there is a differentiation and a projection to the outside, but pravibhaj does not yield this sense.

verse 92

The suffix -tah in svātmamātratah is interpreted as a locative, following the rule sārvavibhaktikas tasi.33 One might dismiss this as an artificial exegetical device used only in technical literature, but it is used too often to be ignored.34 unmeşa, literally "opening the eyes", is another word which might just

30 See the parallel in TA 5.44ff. Cf. also Bṛḥadvimarśinī, vol. II, p. 177 (line 21)–179.

mean "become manifest", but it is used here in a specific technical sense. The mean become manages define the word: (1) in Spandakārikā 2.8 it is that following two passegs for the follow which destroys ignormal which destroys ignormal which destroys ignormal which destroys in the context of meditation. 36 (2) *Īśvarapratyabhijňākārikā* 3.1.3: "*Īśvara* is in the context of meditation." in the context of the opening of twards (timesa)". ³¹ Here isvardativa is defined as externality, the predominance of 'this', and sadāsiyagyaratativa is definition of 'I', internality. Abhinavagupta's interpretation nativa as the processing starts with a quotation of Spandakārikā 1.1 thereby disclosing in the Vindastation in the Vindastation in the source for the idea: "He whose opening out is the origin of the universe" the source for the universe in this quotation the *isvaratattva* is called opening out (*unmesa*)." As so often, his quotation is not literal, as the sentence is split into two parts. A literal often, in squared of the same passage quotation of Spandakārikā can be found in the treatment of the same passage in the IPVV (vol. III, p. 266).

The present context is, however, more complicated. From what precedes it seems that we are redefining the full set of five powers, normally called cit, āṇaṇda, icchā, jñāṇa, kriyā as aspects of the process of manifestation. The list in our passage is out of order: icchā (87c), ānanda (88d), kriyā (90a), jñāna (91d), but the strong conclusion in 92d forces us in the present context to put ummesa in the place of cid, even if it is clearly used for ananda in 197c in a closely related context!

5.4 The Number of Powers

The next two verses form a justification of the validity of differing pantheons, i.e. of a central Siva with varying numbers of śaktis, or even with a female deity alone. The last idea was certainly seen as suspicious for the Saiva mainstream, and the Sāraśāstra had to be adduced as a scriptural testimony for a purely Śākta pantheon.

Å more detailed gradation of powers is given in TA 1.110f:

[TA:] The lonely hero, the pair, with three powers, fourfold, as with five forms, sixfold, sevenfold and adorned with a group of eight [...]

³¹ kalanā pariechittih, TĀV 6.6.

³⁴ yaryonmesād udayo jagatah – īty atra īšvaratattvam evonmesašabdenoktam

[Commentary:] He is "the lonely hero" [i.e. Siva alone] in the first meditation of the Netratantra, "paired" in the same [text]. In the Kula method there are the three powers Para [, Apara] and [Parapara]. "Fourfold" [means] divided into Jayā, [Vijayā, Jayantī] and [Aparājitā].³⁹ "With five forms" [means divided] into Sadyojāta etc.

This is taught [in scripture] that:

In the Siddhanta the pentad is the essence, the quaternary in the left and right [stream], but the trinity in the Bhairavatantra ... '40

In TA 1.111 and commentary the sets of deities for the numbers up to twelve are given and even a thousandfold pantheon (according to Jayaratha in the Triśirobhairava) and an innumerable number of powers.

The conjecture "Sāraśāstra", proposed by SANDERSON, is based on the quotation of a line from this text in the IPV. 41 Here Sāraśāstra stands for the lost Trikasāra, 42 but the term is also used in a wider sense for the genre of "quintessential scriptures" of the non-dual schools, 43

Although both variants in 94c are different from the text of the Mālinī, the version with the verse-filling vai in Ked and J2 is less convincing.

The scriptural support for the multiplicity of powers is Mālinī 3.5-6. The full text of the quotation runs as follows:

vā sā śaktir jagaddhātuh kathitā samavāyinī icchātvam tasya sā devi sisrksoh pratipadyate ||5|| saikāpi saty anekatvam yathā gacchati tac chṛṇu evam etad iti jñeyam nānyatheti suniścitam ||6||

39 Siva worshipped as Tumburu with these four powers is one of the pantheons described in the Netratantra. See Introduction, p. 22.

verses 95-97 In TA 1.95ff Abhinavagupta says that God is described by words taught in the In TA 1.9311 referred through "etymology" and gives examples of etymologies that are formed through "etymology" and gives examples of etymologies that are formed through the lost Sivatanus T. Sāstrās unio gies of Bhairava from the lost Śivatanuśāstra. The sodaryaih in 95c therefore

means "related to the denoted object", a fact that can be demonstrated through nirvacana, rather than "related to one another". nirbhara in 95a is part of such a nirukti of Bhairava. 44 For the use of "nearer" and "further away", cf. TĀV 5,6; kecid dhi upāyāh samvidi samnikṛṣṭāh, kecic ca viprakṛṣṭāh |

In these verses the author carefully introduces the concept of the highest deity being ultimately nameless. The reason for this is that names, being mental constructions, are dependent on prior manifestation.

verse 98

The doctrine of a formless deity has its problems, if one wishes to establish a school above others, a school which has not only a formless level, but also specific pantheons. One has to safeguard some forms of worship against a too radical mystical devaluation of form. 45 The "group of words" (tat = śabdajātam) that describes the highest deity appropriately is therefore not "just conceptual", for the point of much of the preceding discussion has been to prove that the threefold and fivefold structure of Siva's powers is a direct representation of reality, - as will be the fivefold Śāstra.

But even if one wishes to deny any connection between vikalpa and reality, and thereby make the concepts expressed in the Śāstra irrelevant, our author maintains that the ideas contained in the Śāstra are still Śiva's "constructions", or at least inspired by him. The causative may hint at the different interlocutors in the Agamas, who are producing the doctrine originally taught by Siva.

verse 99ab

As TA 11.21-23 shows, the Trika according to Abhinavagupta knows of two tattvas beyond the thirty-six pan-Śaiva ones. Beyond the thirty-sixth tattva, which is called siva, there is parasiva as the thirty-seventh, and beyond that a thirty-eighth. The śivatattva is completely empty (śūnyātiśūnya), thereby representing the complete transcendence of all (lower) tattvas, but this negation cannot be the highest reality for the Trika. There is therefore a thirty-seventh tattva which is the undivided, autonomous reality. But even this level of reality can be made the object for meditation and instruction. There is therefore a

⁴⁰ ekavīro yāmalo 'tha trīśaktiś caturātmakah | pañcamūrtih sadātmāyam saptako 'stakabhūşitah [110] ...[Commentary:] yathā ekavīro mrtyujiti prathamadhyāne | yāmalah tatraiva kulaprakriyāyām tisrah saktayah parādyāh | caturātmā jayādibhedena | pañcamūrtih sadyojātādītayā | tad uktam: siddhānte pañcakam sāram catuṣkam vāmadakṣiṇe | trikan

⁴¹ Commenting on the word sāra as a synonym found in the "main Āgamas" for the highest reality Abhinava says: śrisāraśāstre 'pi nirūpitam: yat sāram asya jagatah sā śaktir mālini parā iti, IPV vol. 1, p. 211. See also SANDERSON (1990b), p. 45, fn. 70.

⁴³ TÃV 14.33 understands *Sārasāstras* as "*Ūrmikaula* and others" (See GNOLI (1972).

⁴⁴ See Sanderson (1990b), p. 75, fn. 178.

⁴⁵ Abhinavagupta's attitude to ritual is quite similar. See SANDERSON (1990b), 9.3.1–9.4.

thirty-eighth reality that is utterly subjective and – as Jayaratha says – "pure thirty-eighth reality that the state of the knowledge" (bodhamātra). 46 It is difficult to say whether Abhinavagupta's doctrine is represented properly by Jayaratha, but when we take into consideration the description in the TA, the thirty-eighth, as an unobjectifiable reality and the description of the variant in J_1 is therefore

verses 99cd-101

This form of time is not identical with the tattva of the same name, but is a power that belongs to Siva himself. ⁴⁷ Jayaratha (TĀV 6.7) explains that one talks of a power or potentiality (śakti) to indicate that Śiva does not suffer this differentiation himself, he is still beyond sequence and non-sequence; "a fire though united with the power to burn, does not show any [signs of being itself burnt] like blisters".

tatra could be interpreted in a variety of ways, but it must refer to the place where according to Abhinavagupta time has no differentiating influence.

5.5 The Transcendence of Purity

vidyādi refers to an intermediate level in the series of tattvas, represented by māyā and the five kañcukas: kalā, vidyā, rāga, kāla, niyati. That the Siddhānta opponent has selected $vidy\bar{a}$ is probably not significant. The series of $ka\bar{n}cukas$ usually starts with kalā or kāla in the theology of the Siddhānta. 48

This question introduces a line of argumentation which is crucial for Abhinavagupta's exegesis of the Mālinītantra. As indicated in the introduction, the Mālinī shares the basic dualism of many other Āgamas, and from this perspective our author's claim to be based only on this text and simultaneously to uphold a non-dualistic theory is remarkable. It would on the other hand also be unfair to say that Abhinava is deliberately misunderstanding or reinterpreting his fair to say that primary scriptural source in a manner which is completely foreign to it. There primary scriptures on the primary scripture is probably no one philosophy that follows naturally from an Āgama. Dualistic is probably to be difficulties in finding a consistent philosophy expounded in the exegests too had a sense much Agamic material appears to be pre-theoretic, or not proptext. In a sense whether this is due to a complicated history of redaction, or also to the nature of these texts remains to be seen.

From an unbiased perspective the obstacles to Abhinava's monistic reading are, however, considerable: the hierarchical structure of the universe with its are, nowered and an impure part are too pervasive, and important for the religious practice he wishes to explain, for a simple non-dualism to be convincing.

In our verse the first problem is raised by the opponent in a forward leap: if we accept this theory of prakāśa being the common denominator of everything, the final consequence would be that the hierarchy of tattvas could not be maintained, because all the tattvas would partake of Śiva's purity. It has to be remembered that in the dualists' account of creation Siva is not in contact with the impure part of the universe, but Ananta, a partially liberated soul, is entrusted with the "office" (adhikāra) of creating the lower universe and other minions administer it. 49

verse 104

The intensive narīnṛṭyāmahe occurs also in TĀ 10.34: apūrvam atra viditam narīnrtyāmahe tatah. According to Jayaratha the line is meant to be polemical.

verse 105

There are two more or less obvious interpretations: tat in pada c could refer to the "highest reality", Siva etc., or to kathā. I have adopted the second in order to maintain consistency with 124. It then comes to mean that the concept of purity and impurity is not a feature of reality itself, but only of the concepts we form about reality, and it is therefore difficult to evade in a discussion, which must necessarily work with the dualism inherent in conceptual thought.

⁴⁶ Jayaratha also records that some "who have fallen to the state of nescience" quarel over whether this doctrine exists only in order to avoid the accusation of having two mutually contradicting qualities, namely transcendence (viśvottīrna) and immanence (viśvamaya) in one reality. He also rejects the allegation of being in contradiction with scripture on the grounds that the thirty-seventh is only for instruction.

⁴⁸ In the Siddhānta Tantras we find a very variable picture. See GOODALL (1995), p.xix.

⁴⁹ The locus classicus for this is Kiranatantra 3.26–7. Cf. also SANDERSON (1992), p. 282–

The objection is not easily answered, as it presupposes the monists' theory of The objection is life to the state of the objection in the objection is a detailed discovery of the objection in the objection is a detailed discovery of the objection in the objection is a detailed discovery of the objection in the objection is a detailed discovery of the objection in the objection is a detailed discovery of the objection in the objection is a detailed discovery of the objection in the objection is a detailed discovery of the objection in the objection is a detailed discovery of the objection in the objection is a detailed discovery of the objection in the objection is a detailed discovery of the objection in the objection is a detailed discovery of the objection in the objection is a detailed discovery of the objection in the objection in the objection is a detailed discovery of the objection in the objection is a detailed discovery of the objection in the objection is a detailed discovery of the objection in the objection is a detailed discovery of the objection in the objection is a detailed discovery of the objection in the objection is a detailed discovery of the objection in the objection is a detailed discovery of the objection in the objection is a detailed discovery of the objection in the objection is a detailed discovery of the objection in the objection is a detailed discovery of the objection in the objection is a detailed discovery of the objection in the objection is a detailed discovery of the objection in the objection is a detailed discovery of the objection in the objection is a detailed discovery of the objection in the objection is a detailed discovery of the objection in the objection in the objection is a detailed by the objection in the cussion of the problem of purity in the TA, which I shall briefly summarize. The pan-Indian concept of purification is applied in the *Tantrāloka* (e.g. 4.118ab). but not without translation into the realm of cognition. The reason given for this is the illogicality inherent in the concept of purification and the scriptural injunction that all rules concerning religious practice are invalid at the highest level. The crucial passage from the eighteenth chapter of the Mālinītantra. which is discussed in TA 4.212cd-275, starts with: "Here [on this level of practicel there is no purity or impurity." (MVT 18.74a) The analysis then starts with the question of whether purity and impurity belong to the nature of an object. If they did, purification would amount to a change of the nature of a thing, which is impossible. Moreover, if we were to subscribe to a materialistic theory of purification, we would have to assume substances that would be at the same time pure, as they would purify objects lower on the tattva scale, as well as impure. as they themselves could be purified by those above them. But apparently the concept of religious purity does not allow of such a relativism. If we were to suppose that mantras are the cause of purity, 51 then it should be their identity with Siva which effects the purification. But in this case everything else would be equally pure through being identical with Siva as the light of manifestation and the concept itself would thus be rendered invalid. 52 But in the mantras it is their consciousness of the nature of Siva that constitutes their purity and likewise all levels of reality can be pure, if only the Yogi recognizes their identity with Siva. With this argument purity has become a form of knowledge and has been transferred from the object to the subject.

In Abhinava's use vandhya ("barren") is far from its literal meaning, for a more natural translation: "although he is completely unable to produce diversity" is excluded by being in contradiction with his philosophy.

It should be noted that the question concerned the problem of impurity, but

the answer is about duality. I do not think that Abhinava is trying to evade the the answer is about the transcendence of purity and impurity is non-duality problem: for the Kaulas the transcendence of purity and impurity is non-duality put into practice (advaitācāra).

verses 109-110ab

verses 109-100.

The appearance of duality in non-duality does not itself constitute samsāra. It is The appearance as light that souls become and its absence proof that one has risen beyond it. 53

As defined in the Trika $m\bar{a}y\bar{a}$ is not a kind of delusion, but the perception of something as different from consciousness (bhinnavedyaprathā). Similarly ignorance $(avidy\bar{a})$ is not absence of knowledge, but incomplete knowledge.

We cannot accuse the author of being prolix here. He will come back to the concept of "anxiety" or "inhibition" in the next verse, but here he is trying to answer the serious objection of not being in accord with scripture.

"This Śāstra" can only mean the Mālinī, but I have not been able to find a "bhagavadyoga" there. We could suspect a lost passage or just a very free paraphrase, but it is more likely a variant reading for MVT 1.4, which runs in all the sources: 54 bhagavan yogasamsiddhikānksino vayam āgatāh. With this verse as well as MVT 1.10a - the whole Agama is put into the right perspective for Abhinavagupta, since it indicates in the very beginning that the main aim of this Śāstra is not liberation through action, i.e. ritual, but through Yoga. His reading bhagavadyogah could add another important point, namely that yoga is to be understood as a unification (yujir yoge) with Siva and not just a kind of trance (yuj samādhau) that could accommodate different concepts of liberation. 55

Verses 111cd-112ab describe the method of teaching a non-dualistic doctrine under these conditions, that is, to disciples who are bound by dualistic thoughts. It is to take into account all dualistic notions and to dispel them by minute anal-

⁵⁰ The question concerning initiation is dealt with only in the second part of the Vārnika (II.152-154). For the theory of ritual from a non-dualist perspective, see SANDERSON

⁵¹ This, by the way, shows the relevance of this discussion for initiation, where the mantres

⁵² According to Jayaratha the aim is not to prove the invalidity of the concept itself, but its transcendence on the highest level of practice.

 $^{53\,}$ Cf. the role of the "consumption of a sacramental impurity" in the unconventional initiation of the non-dualists. See SANDERSON (1995), p. 46.

⁵⁴ Somadev VASUDEV, who is preparing a critical edition of the MVT, kindly informed me that according to the sources available at the moment there is no such variant in the transmission of the Tantra. A confusion of the ligatures of dya and nya in Śāradā is however

⁵⁵ Different types are mentioned, for instance, in the Śaivaparibhāṣā (p. 341); utpatti, samkrānti, samāveša and abhivyakti.

ysis. 56 With this definition he is able to explain that the Śāstra uses dualistic terminology only in order to transcend it.

verses 112cd-114

In a system of non-duality the concept of unification (yoga) itself has to be reinterpreted, since there is no way one can "enter" into Bhairava, or remain⁵⁷ in him, for this would imply a duality of the soul and Siva. In the formulation of the Pratyabhijñā the soul can only recognize its true nature to be Śiva, and consequently the Trika had to reinterpret both ritual and meditation as encapsulating this knowledge. The unity with Siva cannot be produced, as it is already there. but, unlike the Siddhanta, which held the view that ignorance was caused by a substance-like covering of the soul that had to be removed by an action lie rituall, it conceived of the obstacles in more psychological terms:

"Therefore repeated practice serves to obliterate the identification with the state of being the [artificial] subject [centred in the] body etc.,58 but not in order to attain the [real] identity which is always (?) the essence of mani-

On a more philosophical level the same principle can be applied. As duality is a given fact, it would neither be possible nor make sense to teach non-duality directly. The dualistic concepts have to be analysed to be finally negated.

To summarize: the opponent's question (107) is dealt with in two ways; firstly, ritual is not the primary concern of the Mālinī, but Yoga; secondly, it is necessary for didactic reasons to suppose duality. This means that even if large parts of the Mālinī are dualistic and advocate ritual action, only portions or even single statements in the text that deal with Yoga and negate the dichotomies of ordinary religious life (pure/impure, etc.) represent the actual, non-dualistic doctrine of the Tantra, i.e. its Kaula essence.

verses 115-116

The first line is problematic. yāvadgati could be translated as "by all mean-The first line is possible", 60 but judging from the context I think that Abhinava s", "as far as possible on adultistic Vedanta here and to define his adis trying to state dustive. For him duality is always present as an appearance in vaitavadan as included in the non-dual ground; duality is therefore not entirely rejected, one does not rethe non-dual growth and ignores it, but sees it for what it is: an expansion of one's own self. 61

ne's own sent most of the doctrinal constants of Saiva theology, such as the "levels of reality" most of the most o thirty-five tattvas below Siva would be utterly useless.

I could not find any indication in the text that Abhinavagupta wanted to discuss or reject Sāṃkhya doctrine with "twenty-five" tattvas in 116c; it is more likely that a scribe did not understand the significance of the number "thirtyfive" in the context and "corrected" it.

verse 117

An Indian commentary might introduce this verse with the objection that if duality somehow remains all one's life, what is the point of being liberated in life.

Apparently it is the absence of the fear or inhibition, which we have described as a symptom of samsāra, that defines the liberated state, rather than the mere absence of duality.

verse 118

The Ked reads 118c as a compound.

I have eventually decided to cut through the Gordian knot by reversing the position of tad and vat.

The Vijñānabhairava is important for Abhinavagupta's Trika in as much as it lends scriptural support for higher non-ritualistic levels inside the Trika, characterized by an increasing "essentiality". This perspective emerges from the introductory part of this Tantra, where every "structured form" of the deity is called an illusion, taught only to provide those who are unable to grasp the formless deity with some "means of concentrating their awareness in meditation." 62 The

⁵⁶ For a similar phrase for "detailed exposition", cf. vibhajya vyākhyātam, IPV 1.1.1, vol. l.

⁵⁷ upaveša means literally "sitting down", but in upavista, for instance, the sense is extended

⁵⁸ The Pratyabhijīākārikās know of several artificial (krtrima) identities based on the body. the vital energy, the mind and the void. The first to mention these is probably Kallaja in his

⁵⁹ ata eva dehādipramātṛtābhimānanimajjanāyābhyāso na tu sadā prathamānaiāsāraptamätriäpräptyartham, quoted in Pratyabhijäährdaya (Sütra 15, p. 36) as being from the author of the thor of the Śripratyabhijñā, i.e. Utpaladeva.

⁶⁰ Bhāskara glosses it once as yāvadupāyam. See below.

⁶¹ ĪPK 4.1.12: sarvo manāyam vibhava ity evam parijānatah | viśvātmano vikalpānām prasare 'pi mahesatā ||

⁶² See SANDERSON (1990b), p. 74-76.

doctrines taught in the Yāmala[tantras] (see Vijñānabhairava 1) are therefore not useless, but necessary for the movement from duality to non-duality, as every instruction in non-duality has to start from duality.

The same verse from Bhatta Nārāyaṇa's Stavacintāmaṇi is quoted in IPV 1.2.1 and in Bhāskarakantha's Cittānubodhaśāstra 2.165 (p. 38).

In the introductory verse to this chapter of the IPV the author accords a metaphysical necessity to the opponent's view (pūrvapakṣa), namely as that which is manifested by Siva himself in order to dispel it:

We adore Siva, who manifests everything in division as the pūrvapakṣa and then leads it to non-duality as the correct view. 63

Bhāskara, the commentator on Abhinavagupta's Vimarśinī, develops the idea slightly further by calling, in his introductory verse on the same chapter, nonduality the "middle argument":

"We adore Siva, who after destroying duality as the pūrvapaksa with the middle view of non-duality, finally adopts the highest [i.e. inclusive] non-

But the principle is not only applied to philosophical views, but also to religious practice. In his commentary on Bhatta Nārāyana's verse Ksemarāja introduces it with the question why, if only knowledge is effective, ritual is taught at all:

"If according to the [Advaita] Vedānta everything is part of the Lord, then why is not only knowledge taught in the portions [of authoritative texts] that deal with action, 65 and [furthermore] how can [action] be [taught and then] forbidden in the portions dealing with knowledge ... "66

Two verses before in the Stavacintāmaņi the three Vedas had been mentioned and the commentary therefore applies the idea to the Vedanta by following the context, but in the $V\bar{a}rttika$ it is obviously applied to different layers within the Agama and more specifically within the Trika. 67

gama and more programmed the strength of the s Ksemalaja staught by God himself as that which must be abandoned and it is only ignois taught by make plausible why this fact is not stated in clearer terms in the proper place, i.e. in the lower scriptures themselves. There is the secrecy of the higher teachi.e. in the lower transfer that is adduced as a reason why it is only revealed to those fit for it. Another ings that is a line in the increasing of protecting the five cosmic acts, that is, to make creation, which necessarily entails obscuration (tirodhāna), possible. In keeping with his context Ksemarāja directs his polemic against "those deluded people" (i.e. the Mīmāmsakas) who devalue the aspect of knowledge by saying that it is only a praise of ritual action, not a description of facts 68

verse 121ab

is not very clearly phrased. Surely our author wants to say that the combination of heterogeneous elements in the verse from the Stavacintāmani creates the poetical effect, and that this combination is expressed by ca. The only ca in the verse is in 120a, but this combination is not so surprising. What must have been interesting for Abhinavagupta in this context is the close combination between 'veiling' and 'unveiling', a combination which is expressed only by the absolutive followed by the participle. I therefore assume that to express this combination, our author rephrased part of the verse: udbhāvvante bhramāś ca [bhidyante ca] and wished to emphasize with the atra that not the ca in the quoted verse itself, but the one in his paraphrase, is meant. It is therefore the combination between udbhāvya and bhindate that is the unexpected element in Bhatta Nārāyana's verse.

⁶³ pürvapakşatayā yena viśvam ābhāsya bhedatah | abhedottarapakṣāntar nīyate taṃ stumb

verses 121cd-122ab

The "purification of the adhvan", as part of the Śaiva initiation, is only possible The "purification of the comes one with Siva in order to unite the disciple's soul with the higher levels of reality. A purely dualistic theory must therefore leave part of the efficacy of initiation unexplained. This answers the objection raised in

The opponent seems to follow up to this point, but takes exception to the word

This definition of non-duality might be seen as contradictory to the preceding A traditional commentator would probably say that the present verse describes ultimate reality, where there is no more question of heya and upādeya, but the previous section had described the way to this goal by refutation of duality.

Here the qualification of this doctrine of non-duality as "supreme" is crucial. On the one hand non-duality is only conceivable as an uttarapaksa, an antithesis to dualism. On the other hand it cannot continue to stand in opposition to it, as this opposition would itself disprove non-duality:

"But non-duality is not taught by us to be the exclusion of duality; this would only prove your position, for then the duality would be explicit That in which [the notions] 'this is duality', 'this is not duality' and 'this is duality plus non-duality' equally appear is what is called non-duality."

This supreme non-duality is a philosophical position which is able to accommodate everything. 70

verse 124

GNOLI translates the verse, reading the transmitted rasān, as follows: "Dal punto di vista del dualista, tutte le cose sono invece confinante in se stesse, e, quindi, la non-dualit... non può fare altro, a mio parere, che un buco nell'acqua." 71 Given the economy of Abhinava's style it is, I think, less likely that it gabdo 'yaṃ should be used in such a weak sense. Moreover I doubt that the §abdo 'yani should that the Sanskrit shares the idiom "un buco nell' acqua" 72 and therefore propose to read rasāt in the sense of "automatically". 73

ad rasal in the herefore not a causative, but a denominative and a confusion be variant rasān as a attended to of the two can explain the variant rasān as a attempt to provide the accusative of the two card at object. Provided the interpretation is correct, the verse would work very well object. Provided work very well with 105 in trying to explain why this peculiar non-dualism cannot be easily understood from the perspective of dualism.

Abhinava therefore says in the IPV:

As we will state later the "consciousness" that can be expressed refers to objectivity, because it becomes the object of differential thought and, since it is created, is not the highest consciousness. The same applies to its [other] names: "agent of action and cognition" and "god". Therefore one should strive by all means to avoid the fault of degradation through becoming an object. [...] But for the purpose of instruction it is impossible to avoid completely that it becomes an object. 74

verses 125-126

For alam, see p. 53

The two verses form a couplet in a new metre and, judging from the contents, the variation of form here indicates a summary. The first verse ends the discussion on non-duality and recapitulates the statements concerning the relationship between consciousness, i.e. Siva, and time. The second rephrases the important concept of an appearance of duality within non-duality.

In the part of the text discussed here the prakrtam is mentioned in 160a, 249a and 347, where it refers more or less directly to the doctrine of the five streams, but in the section preceding 126 the author was still discussing the nature of knowledge itself and its relation to time as a preliminary to that.

126d and the following line in brackets are problematic: the unmetrical svātantryāt could be corrected, for instance to nirapekṣaṃ, but the chances of

⁶⁹ na hy advayam dvayāveśabādhenāsmābhir ucyate | tvatpakṣopagamo hy eṣa syād dvayan tad dhi susphutam || idam dvaitam idam neti tad idam ca dvayādvayam | iti yatra sama

⁷² Provided my interpretation of the Italian as being equivalent with German: "ein Schlag ins Wasser" is correct.

⁷³ rasāt is used by the author in T $\bar{\text{A}}$ 37.39 and 4.115; svato rasāt in PTV, p. 216 ("spontaneamente" GNOLI (1985), p. 137). Cf. also the use of svarasatah in TĀV 15.47.

⁷⁴ samvid iti tu ucyamānā vikalpyatvena prameyatām spṛśantī sṛṣṭatvāt na paramārthasamvit iti vakṣyāmaḥ | kartā jīātā ca maheśyara – ityabhidhāne 'pi sa eva prakāra āpatet. tti - yathā yathā prameyabhūmikāpādananyakkārakalankaparihārah sakyah tathā sathā yāvadgati yatitavyam ...upadešāvasare hi sarvātmanā tāvat sā prameyatā asya parihar-lum at al hum aśakyā | ĪPV 1.1.2 (vol. 1, p. 32f).

arriving at more than a merely metrically possible reading with the same sense

The line that follows in all sources cannot be anything but a scribal gloss, because of the way it refers to the preceding verse.

In pāda b aham eşa is emphatic (cf. so 'ham APTE (1986), s.v. tad, no. 5.); "this

"Maitra and Caitra" means "anyone" and -prāyāḥ adds the sense of approx-

This question is only a modification of the previous one on omniscience. If consciousness is undivided and present in all subjects, and, moreover, source of the powers of cognition and action, then an intersubjective identity in action, and even in knowledge is inexplicable.

ekaghanabhāvavimarśa could mean "a homogeneous awareness of being". but, in order to indicate the implicit duality, "becoming" is preferable. For the problem of the opponent is not the awareness of unity, but the different scope of knowledge in subjects that are ultimately identical with Siva. 75

verse 128

As so often, Abhinava starts his answer by bewailing the stupidity of the opponent. He then affirms his radical theory of manifestation: the opponent's question is not valid, because it refers to something inside manifestation, but it has never been denied that duality exists in manifestation. It has only been stated that this duality is, however real, on a very different level than non-duality.

The main misunderstanding of the opponent, from this perspective, lies in his unwillingness to acknowledge the fundamental priority of a light that is utterly unobjectifiable. The question is inappropriate in as much as it presupposes that the qualities of this light are to be found equally in all its manifestations.

verse 129

This verse is too elliptic to be sure about the interpretation: nanu might start a question and naitat the answer. But the next verse elaborates on the concept

of "possession" (mamakāra) and suggests that the emphasis is on the notion of of "possession" of "possession emine". The symmetry of the verse would mean that the mere process of perception derstood in this way the verse would mean that the mere process of perception derstood in this derstood in the process of perception or appearance of a thing that is seen as the manifestation of consciousness does or appearance of a thing that is only the notion that corrections are appearance of a thing that is only the notion that corrections are appearance of a thing that is only the notion that corrections are appearance of a thing that is seen as the manifestation of consciousness does not a thing that is seen as the manifestation of consciousness does not a thing that is seen as the manifestation of consciousness does not a thing that is seen as the manifestation of consciousness does not a thing that is seen as the manifestation of consciousness does not a thing that is seen as the manifestation of consciousness does not a thing that is seen as the manifestation of consciousness does not a thing that is seen as the manifestation of consciousness does not a thing that is seen as the manifestation of consciousness does not a thing that is seen as the manifestation of consciousness does not a thing that is not a thing that it is not a t or appearance or not entail any duality. It is only the notion that something belongs to oneself and not to others which creates a division that misrepresents reality.

verse 130

Dvaipāyana might stand for Durvāsas in a Śaiva context, the Rsi, whose mind-Dyapayani mg born sons, according to the legend related in *Śivadṛṣṭi* 7.107ff (quoted in TĀV born soils, become of the threefold Saiva revelation. But here it is a refer-1.8), were the same and and 18.53 (nirmama). In his commentary on the Bhagavadgītā Abhinavagupta sees this sense even in the *māmakāḥ* ("our people" or "selfish") in the initial verse of the text. This unobtrusive reference to the Gītā is used to prove that such a doctrine is to be found even on the most general level of scriptures.

This verse is to be connected with 125, where the relationship between consciousness and time was mentioned as the main topic. It tries to reconcile the notion of time as a differenting force with the indivisibility of consciousness through the sarvasarvātmakatvavāda, the doctrine that everything consists of everything. 77 This doctrinal peculiarity explains why the fullness of consciousness persists within differentiation.

The phrase kālakalanā in 131a is an echo of Vijnānabhairava 14. For the root kal and its interpretation, see commentary on 90f.

⁷⁵ As a grammatical term bhāvaḥ describes also a 'process' activity (Pāṇini 3.3.11). See Eivind KAHRS' article in: Essays in Honour of Nils Simonsson. Ed. by Eivind Kahrs, Oxford The Institute for Comparative Research in Human Culture 1986, p. 115ff, Compare also Al-BRECHT WEZLER, Bestimmung und Angabe der Funktion von Sekundär-Suffixen durch Pånini, Wiesbaden: Franz Steiner Verlag 1975, p. 99f, where bhāva is translated as "dynamisches Sein" (p. 103).

⁷⁶ Cf. Abhinavagupta's Gītārthasamgraha, introductory verse 2: dvaipāyanena muninā yad ida. idam vyadhāyi sāstram ...

Section 6 The Five Streams of the Sastra

6.1 Kula

Having explained how there can be difference in unity and simultaneously full. ness, i.e. a state of differentiation without division, he takes up the proposition made already in 50 about the fivefold nature of the universe and applies it to

Without the conjecture in 134ab the line would mean: "By subordinating the persistence of the [state of being the] power and the soul, the highest deity lot speech] is emphasizing [this sense of the Sastra] in her own self." But this does not work well, as the next verse starts with with a reference to the previous (ittham) and has Siva as its subject.

The translation assumes that we are talking about levels of sense in the Sästra: one belonging to Siva or Sambhu, one of power (śākta) and one of the soul (anu), hereby following one of the interpretations of the word Trika. The compound śaktyanusthitim might therefore be interpreted as śāktam āṇavam

verses 134cd-138ab

As a general rule, different doctrines are alluded to in this account of the Sastra in order to clarify their relative position in the hierarchy: those on a higher plane represent truth more completely than those positioned on lower levels The Trika is an exception in as much as its structure encompasses different

Our author has started with the Trika through defining its characteristic as the equilibrium of the three powers that defines the highest undifferentiated state. and proceeds now to the Kula. But in fact the relationship between the different layers of the text is more intricate, as we are moving from the "highest Inka". which is a metaphysical concept that is probably without a socio-religious corelate, to the Kula, which, as we have seen, represents a plane within the Irib with a specific initiation. The fact that a subsidiary topic, namely how to conwith a specific in an undifferentiated reality, is more on the mind of the opponent ceive of the confusion, for the doctrinal background on which time is dealt with adds to the control which belongs in some sense to the core of the Trika. is the Kramas and the first part of the Vārttika is not a systematic One ought to beautiful or the five streams of the Sastra, but a complicated argumentation to description of the disparatement of the highest position. Through the disparatement legitimate the covered by it and the vagueness of its references to religious reality the argumentation seems sometimes unconnected.

In verses 134cd-138ab the process of the creation of the universe, that is of duality from unity, is crystallized in the term visarga, "emission". The first meaning in our context is that of "pouring out creation" from an undivided state. Parallel to this run at least two other levels of meaning: (1) Creation symbolized as sound, where visarga is the letter of the Sanskrit alphabet of the same name which comes into being by a division in the bindu, the single dot, which signifies the expansion of the undivided reality. (2) The sexual metaphor of creation as ejaculation (visarga). The Kula is frequently called "secret", perhaps because of its sexual metaphors and practices, and this may account for the obscure language as well as the more poetical tone which our author sometimes adopts when dealing with it.

135cd-138ab is an attempt to devalue time as an objective reality by deriving it from the primary act of creation: the process of emission is not something that takes place on a time scale, but the differentiation involved in this process produces internal time as a by-product.

6.2 Time

verses 138cd-139

The opponent does not accept this paradoxical account and confronts our author with a commonsensical definition of time,

The conveniently metrical, but ungrammatical singular vibhajyate can be justified by taking "past" and "future" as separate since their boundaries to the present lies so to speak at opposite ends.

¹ See SANDERSON (1997).

² See PADOUX (1990), p. 277ff, and TA 3.136cd-137ab.

In 140ab a tasmād correlating with yatra has to be supplied. I understand 141cd to mean the following: if there were a real dividing line between past, present and future, not only would there be a division of one object from the other, a we notice in the manifestation of duality which constitutes the world, but also a division within a single object into past, present and future. That means the continuity observed in the world could not be explained. Abhinavagupta's own concept of time, i.e. as merely a qualifier of things, was stated earlier (55-57).

6.2.1 The Obliteration of Time in the Krama

The Krama is a non-dualistic system of Kālī worship and is the most heterodox of the Kashmirian systems used by Abhinavagupta.3 For its transgressive practices it is, like the Kula, "esoteric", and discussion of its doctrines is of ten accompanied by a remark about its secrecy. Central to its doctrine is the worship of sequences (krama) of deities that describe the process of percention as "projection of content, immersion in content, retraction of content into the state of latent impression within the subject, and finally the dissolution of these subjective impressions in the implosion of consciousness into its pristing. non-discursive potentiality. In some traditions, pure luminosity (bhāsā) is worshipped as a fifth phase englobing these four as its creative vibrancy."4

Descriptions of the system frequently play on the symbolism of the three parts involved in the process of knowing and their metaphorical representations: the subject of knowledge is called "fire", as it "incinerates" the object and thereby continuously obliterates duality in the process of perception, only to recreate it in every new perception. 5 Knowledge is called the "sun", because it illuminates the object; and the object of knowledge itself is the "moon" which nourishes the perceiver. These identifications then allow the writer to play on solar and lunar symbolism: the sun, marking the outer realm and, more impotantly, its time divisions into months etc., is naturally connected to the number twelve. 6 In the process of perception it symbolizes the eleven senses (five organs of sense, five of action, plus the mind) and buddhi [=prakāśacakra]. The moon with its sixteen parts is represented as the "circle of bliss" (ānandacakra)

consisting of the twelve parts of the prakasacakra, but with buddhi and manas consisting of a counted as one, plus the five tanmātras. For the present purpose it may suffice counted as the terminology by translating a condensed description of this process from TA 5.63f:

"Therefore it will manifest, fill and resorb8 the object through the sun, which is devoted to initial effort (udyoga) and which consists of twelve parts."9

[Commentary:] "Therefore - because it vibrates with the awareness of the "I" - it, the highest light, having manifested the level of the contracted subject, will manifest – project outside – every object to some extent ($\bar{a} =$ feat), that is, as contracted like "blue", "joy" etc., fill it, that is hold it in existence in precisely this form for some time, and resorb it, i.e. destroy it by assimilation. It does so by virtue of the sun, i.e. the instrument of knowledge, which has a completely replete form, as it consists of twelve parts. [namely] the expressions (parāmarśa) [of sound] from "a" to visarga [which are twelve by] excluding the "barren" sounds and which is devoted to initial effort (udyogah ...tatra saktena), that is by being directed to the outside with the intention to manifest objects. This is the sense. 10

The TA then goes on to describe the "moon" as that which devours this emission only to emit nectar (amrta) into the fire of knowledge. The same metaphor for perception is used in the following verses in the Vārttika, where the author tries to show that the experience of meditation as described in the Krama is a state of consciousness in which time is transcended.

³ A summary is given in SANDERSON (1987), s.v. Śaivism: Krama Śaivism.

⁵ yoʻyam vahnih param tattvam pramatur idam eva tat | ityadyuktya parasamvidama pra

A reference to this in the context of the Krama occurs in Mahānayaprakāša (TSS) 49th māsarāšyādirūpa 'pi dvādašātmānubhūyate |

⁷ In fact the sequence according to the Mahānayaprakāśa starts with the fivefold khacakra, followed by prakasa-, anandacakra, then the murticakra with seventeen parts [ahamkara is added to the sixteen of the anandacakra] and windacakra.

³ The verbal root care is used as a technical term for "resorption" (samharana) or "dissolution" (vilāpanam). The cognitive aspect for this process, as we will see below, is the "reflection" on the object which "dissolves" it.

⁹ tata udyogasaktena sa dvādasakalātmanā 63 sūryenābhāsayed bhāvam pūrayed atha carcayet | Jayaratha glosses -saktena, but the reading of the ms. kha in the KSTS edition of the TA gives -raktena which has an additional pun: "red".

¹⁰ tato hamparāmaršasphuraņād dhetoh sa parah prakāšah saṃkucitapramātrbhūmikāvabhāsanapurassaram udyogah arthāvabibhāsayiṣā, tatra saktena sadaiva bahirmukhena dvādaša sandha|misprint in K_{ed}: santha|varjam akārādīvisargāntā yāh kalāh parāmariās tatsyabhayena praptaparipurnasvarupena pramanatmana suryena ekaikam bhayam a tsat samkucitena nīlasukhādinā rūpeņa bhāsayet bahih srjet, pūrayet tathātvenaiva kamcit kālam sthäpayet, carcayet svätmasätkärena samhared ity arthah | See PADOUX (1990), p. 258

verses 142-144

These verses describe the obliteration of time in what is conceived as the lib. erating experience in the Krama. In order to make the concept more accessible the timeless level of reality is not described in the process of creation, but from

As Jayaratha says, this structure of the process of perception is within ordinary human experience:

"A [person as the] subject of experience who wishes to accomplish something will first perceive a group of objects as centred in knowledge, then think 'it is thus', and then rest in himself by becoming content in the thought 'now I know it' and dissolving the outer form, - this matter is therefore within [normal] experience. 11

The difference to the practitioner - as Abhinavagupta says - is his heightened awareness of the present consciousness, which brings the process of projection to a momentary standstill, in which time is transcended and normal individual-

verses 145-146

This short elaboration of the idea adds religious perspective to the psychological process. In a sense the practitioner is only released from the continuous cycle of projection, because the deities of consciousness are pleased by his offering that consists of his awareness of the object ("moon") in the present moment. Abhinavagupta redefines the ritual of gratification as a form of gnosis by evoking overlapping metaphors. The fullness of the moon, which comes about as the nectar is held inside instead of being poured out into the "fire of the consciousness" of the perceiver, alludes to the vessel for the offering to the goddesses. The white full moon resembles the sacrificial vessel of the Kāpālika, which is made of human skull, and provides a subtle connection to the heterodox background of the Krama.

I think that this passage adds another aspect to the interpretation of the mūlasūtra of the MVT by mentioning the "moon of one's knowledge"; the light of the moon which comes down to be reflected in the other faces and light of the mount of the faces and which will be described as the Kaula stream (395) can also be explained in the terminology of the Krama.

verses 150cd-151ab

From this verse it seems as if the discussion of Krama doctrine was adduced only to prove the commonsensical concept of time as being divided into past, present and future as ultimately invalid. But, as will become clear in 160, the Krama is an integral part of the main topic.

verses 151cd-153ab

Once the division of future and past has been abandoned, even the concept of present time, and therefore of time itself becomes meaningless. The experiential equivalent of this theory is the practitioner of the Krama who "devours" time 12 and perceives objects while remaining in the non-dual absolute. 13

tutih is mentioned neither by the pw, nor in SCHMIDT's Nachträge or APTE's dictionary; it is given in MW, s.v., as a variant of trutih. In the writings of the Kashmirian Saivas it is to my knowledge the standard form of the word.

verses 153cd-155ab

The source of this quotation, if it is not just a statement of doctrine, is not known. In the previous verse our author had described the goal of the Krama as a form of internalization, but on closer analysis also the absence of manifestation is due to the rays of one's own consciousness.

verses 155cd-156

A Dāmara[śikhā] is included in the list of sixty-four Bhairavatantras in the Śrikaṇṭhī, 14 where it is grouped with Vāmatantras. In the Tantrāloka a ḍāmarayāga is mentioned in connection with the Devyāyāmala.

Prof. SANDERSON has pointed out to me that the same verse is quoted in the PTV as being from a Vādyatantra, and that Abhinavagupta's reference there to another work which deals more extensively with time is probably to this pas-

¹¹ yah kal canarthakriyarthi hi pramata pramanoparudham evarthajatan prathamam docu vet, arantaram 'idam ittham' iti vikalpayet, tadanu 'jhāto 'yam mayā arhah' iti sana sähkimänäd bahlrüpatäviläpanena svätmany eva viśramayet – ity anubhavasáksiko sas

¹² For kālagrāsah, cf. Mahānayaprakāśa (TSS) 4.14; atra dattāvadhānānām deśakālaktīvātmanah | kālakramasya sahasā grāso bhavati yoginām || "For the Yogis whose attention is fixed there, the process of time, which consists of [the manifestation of] space, time and action, is suddenly devoured."

¹³ kie brahmany abhedarûpe sthitvă carati vişayam avagamayati | Parătrinsikāvivaruna, p. 30.

¹⁴ Ed. in the Appendix, vs. 284. Quoted by Jayaratha on TÂV 1.18.

6 The Five Streams of the Śāstra

sage in the Vārttika. 15 This sequence of the completion of works, namely MVV sage in the *Variana*. This seq. \rightarrow PTV \rightarrow TĀ, is corroborated by the fact that Karṇa's death is mentioned only in the TA; from the way he is mentioned in the MVV and the PTV we must con-

The point of the two verses, which seemingly contradict the preceding statements, is to apply the same difference that persists between light and appearance to the state of amrta, i.e. the present moment, and the expansion of rays, An ultimate absence of time does not conflict with "commonsensical time", as they are ontologically as distinct as light and appearance. This verse also serves to integrate the Krama concept of time with the Pratyabhijñā doctrine of appear-

Phrases like these indicate that one has dealt with the more heterodox aspects of the Saiva religion. The socio-religious reason for the secrecy is the association of the Krama with the impure Kāpālika culture of the cremation grounds. Here, in philosophical debate, this secrecy is however derived from the nature of reality itself: the description of the process of perception is always short of reaching reality, which lies in the subjective present and evades any approach from the outside. 17 On a philosophical level it is not the heterodox cult performed in an impure environment, but reality itself that is hidden.

6.3 The Sixth Stream

verses 160-163ab For paramesthin meaning "Śiva", see ĪPK 1.5.14.

15 tad uktam śrīvādyatantre "samruddhya raśmicakram svam pītvāmṛtam anuttamam | kālo bhayāparicchinnaṃ vartamāne sukhī bhavet || " iti | vistāritas ca vistarato 'nyatra mayaina kālobhayāparicchedah |, PTV, p. 35. The name of the text remains problematic; SANDER-SON has tentatively proposed $v\bar{a}dya$ to mean "beginning with $v\bar{a}$ ", i.e. $v\bar{a}ma$. Similarly opaque is the reference to a Śrīlādyatantra in PTV, p. 201, if it is not just wrong for radys.

The secondary Sandhi srotodbhavam [\(-srota\)\(dbhavam^{18} \)] in 162a could he justified as aiśa, i.e. peculiar to the language of the author of the Tantras [Īśa = Śiva]. 19

The "[main] topic" mentioned here will occupy us through to the end of this section: the division of the Saiva revelation into five streams and its integration into the non-dualist's account of scriptural revelation. This is accomplished by not the beautiful a "highest" stream, literally one "higher than the higher" which has as its characteristic that it is not emitted by one of the five faces of Sadāśiva, but by the Goddess. It seems therefore that the lengthy discussion of the Krama concept of time, although formally prompted by the opponent's persistence on the topic, is an integral part of the description of the sixth stream. On the other hand the "perceptions emitted by the goddess" would more appropriately lead to Śākta scriptures and not to a Tantra like the Bhargaśikhā that is "taught by Siva", and we might for that reason want to read devavisṛṣṭāḥ in 160ab, assuming that a scribe still had the Krama passage in mind and understood devi. But if we take into account the fact that Abhinavagupta introduces the Krama in an indirect way, and veiled within the Trika, 20 the inconsistency in $dev\bar{\imath}$ lies in his system and not in the transmitted text.

The Bhargaśikhā is quoted a few times in the Tantrāloka; the quotation in 4.255 on the "devouring" of death, time etc., fits well in our context. Other quotations - in 12.20 on vīravrata, 15.280 on vāmācāra - suggest that it was an important scripture for the non-dualists. 21 The main problem is however the qualification saura- given in our text. It could in theory distinguish two texts, one taught by Siva and one by Sūrya, but then only the first would be appropriate to our context. It is more likely that a "Sauratantra" had already been included into the Śaiva canon by identifying Sūrya with Śiva. 22 A Tantra of this name actually appears in the Śrīkanthī's list of Sauratantras! 23

The interpretation of the verse quoted from this lost Tantra is crucial to the whole section of the $V\bar{a}rttika$. It is adduced to justify the claim that the non-dual

as GNOLI suggests.

¹⁷ Cf. the quotation from the Trika(tantra)sāra in PTV, p. 171, and Pratyabhijāākrdaņu (ad Sūtra 1, p. 4).

¹⁸ Cf. namaükti etc. in W.D. WHITNEY: Sanskrit Grammar, Cambridge, Massachusetts 199,

¹⁹ See GOODALL (1995), p. xxiv-xxvii, for a list of aiśa forms in different Tantras. 20 See SANDERSON (1986), p. 204.

²¹ There are other quotations with variations in the name; in 23.6 a Kacabhārgava is quoted on knowledge being the only important quality of the guru, in 32.62 a Bhargāṣṭakaṣīkhākula; in Spandasamdoha, p.12, on vīrabhairava.

²² Sec Kşemarāja on Sāmbapañcāšikā 21 (p.13): Śrībhargašikhāyām api: naiṣa varno na vā fel. fabdo na caivaivam kalātmakah | kevalah paramānando vīro nityodito ravih | nāstameti na codeti na santo na vikaravan | sarvabhutantaracaro bhanur bharga iti smrtah | soo con

²³ See Śrīkanthī, verse 75.

Šāstras are not part of the five streams which are accepted by the Siddhānta, and of which the Siddhanta forms the highest, but are above it. Perhaps this is even to be understood as a slanted exegesis of the compound paramesamukhodbhūta

At this point the question suggests itself why it is the Bhargaśikhā and not the Mālinītantra itself that is adduced as an example for the highest scripture. Naturally we can only speculate on the distinctive qualities of the lost Bhargašikhā that made it the candidate for this high position, but if we judge from the few quotations, it appears that the Tantra is adduced for the [eka]vīra form of Śiva/Bhairava, where the pantheon consists of Śiva alone, i.e. without an entourage of powers. This form is indeed appropriate for the "highest" level, in which the pentad of powers is not yet manifest, but on which a concrete samācāra, namely the worship of vīrabhairava, takes place

The Mālinītantra on the other hand would surely be seen by Abhinavagupta as including the same level, but not as limited to it, and would therefore not serve as a good example. It will become clear later that the Mālinī as the highest Trikatantra is not only beyond duality and therefore representing the "higher". but also capable of leading from the world of duality to this higher truth in as much as it integrates the Aghora face whose characteristic it is to devour duality. The sectarian frame-work of Abhinavagupta's Trika runs parallel to his doctrine of supreme non-dualism: it embraces duality, i.e. lower forms of revelation from the perspective of the "supreme non-dualism". Transcendence of time, duality and the like therefore represents only one aspect of reality, while the superior scripture or system is the one which accommodates "transcendence as well as immanence". 24

verses 163cd-164ab

If the emphasis is on api here, the verse would explain why there is not just one non-dualistic scripture, but a variety.

6.4 Trika Defined as "Half of Six"

This is the definition of the Trika view of the Śaiva canon. At this point in the text the author has sufficiently defined the sixth stream and has shown that the pentad of streams that is known to his wider audience of dualists is derived from

it. The author will return to the details of this interpretation of sadardha at the end of this chapter.

The word Trika is more commonly interpreted as the triad of nara, śakti, and fine word and apara, and apara, but here Abhinava interprets the word sadardha, which could be taken as merely a synonym for Trika, but which according to his teacher is not just a synonym, but conveys a different sense. It implies that the doctrine of the Trika is derived from half, i.e. three, of the six streams, namely the highest stream (*ūrdhvordhva*), the Vāma and the Daksina (cf. 394). It is not quite clear why the author quotes his guru for this doctrine, as he quotes scripture for the same in TA 37.25ff, where he says after describing the MVT as the ultimate essence of the Vidyapītha:

This has been taught in the Ratnamālā by Śiva: the essence of all Tantras is the Kaula doctrine, which is based on the Vāma and Daksiņa, and fuses both. [This is to be found] in the doctrine of the sadardha. 26

There is however one problem with this: the text goes on to describe the defects of the Vāma and the Daksina, but also the Siddhānta without apparent reason, and one could form the idea that this trinity consists rather of the Siddhanta. Vāma and Daksina. One would also find other passages that at first sight confirm such an interpretation. As mentioned in the introduction, Jayaratha in his commentary on TA 1.18 expounds such a trinity, and it is also used in the etymology of Triśirobhairava in 395cd-397. This is probably the reason why Dy-CZKOWSKI has explained the problematic pūrvārdha with a spatial interpretation: "The 'pūrvārdha' seems to refer not to the 'half on the west side' but that 'in front' of Trika, i.e. the Siddhanta-, Vama-, and Bhairavatantras of which Trika is the essence."27

It is however hard to believe that Abhinavagupta would have tried to defend an explanation of sadardha, according to which the 'half' would consist of four, namely ūrdhvordhva, Īśāna, Vāma and Dakṣiṇa. As will be explained later, the trinity of \tilde{I} sāna, Vāma and Daksina (395cd-397) is used by author to make a different point. But here the $p\bar{u}va$ must refer to those Šāstras that are

²⁵ naraśaktiśivātmakam trikam PTV, introductory verse 3.

²⁶ uktam srīratnamālāyām etac ca paramesinā ||25|| aseşatantrasāram tu yāmadaksinam ásritam | ekatra militam kaulam śrisadardhakaśāsane | 26|| Similarly in the Jayadrathayāmala, quoted in SANDERSON (1986), p. 186, footnote 83.

²⁷ DYCZKOWSKI (1988), p. 174. In order to give the passage a spatial interpretation, we would have to have to assume a projection of the six streams into two dimensions. We could adduce the Bhita figure (KREISEL (1986), p. 61), where Vāmadeva and Aghora are in the eastern half, but it is unlikely that our author had this specific sequence in mind.

"earlier" in the sequence of creation, as their doctrine is ranked as higher. Such a sequence of the six *srotas* is reflected in the hierarchy of initiations. Even if the details of the different lists have to be brought into agreement, ²⁸ it is apparent that the highest level is occupied by the initiation of the Trika and different modes [Mata, Kaula, Kula] which have no direct correspondence in the system of the *pañcasrotas*, but which could, for the time being, be treated as subdivisions of the Trika. This is followed by the Daksina, the Vāma and finally, the Siddhanta. Presumably the remaining two streams, namely that of the Garuda- and Bhūtatantras, were without a religious correlate at the time of Abhinavagupta and are therefore left out of consideration. As our author says in TĀ 13.321, a person initiated in the "earlier" (pūrva) stream is authorized to perform initiation in those below, but not vice versa. pūrvārdha therefore means the three higher parts of the six streams: ūrdhvordhva (the sixth stream), the Daksina and the Vāma. The trinity formed by Īśana [=Siddhānta], Vāma and Daksina in a second step is an attempt on the side of the Trika to encompass the whole spectrum of Tantric Saivism, i.e. down to the Siddhanta. It is the definition of Triśirobhairava, but not of sadardha.

The position of alam at the end of 165d connects the idea that it is adequate to describe Trika as "half of six" with the next verse, where he justifies this interpretation by saying that it is not an arbitrary variant in order to keep the doctrine obscure, for if it had been, then other, more complicated, variants for sadardha should also be in use.

6.4.1 Yāmala

verses 167-168

For the conjecture in 168b, see SANDERSON (1986), p. 186.

The author now reverts to a description of layers that are as it were inserted between the equilibrium of the powers that defines the Trika and the fivefold expansion. This gradation is reflected in the construction of the Trika's mandala in which the Matayamala is slightly below the Trika:

"In the (Śaiva-)Siddhānta the throne culminates in the (nine) Powers of Gnosis. In the Vama and the Daksina schools it is extended to incorporate Sadāśiva. In the Matayāmala it rises above Sadāśiva to end in the Conscious (samanā). Here in the Trika it goes even further, ending only in the Transmental (unmanā)."29

Matayamala, as argued by SANDERSON, 30 stands for the Picumatabrahma-Matayamata, an unedited Saivatantra that survives in manuscripts:

"This central stream of revelation is identified by Abhinavagupta as the Kaula, that mystico-erotic tradition which pervades the higher reaches of he Bhairava-teachings and has indeed expressed its relation to the Vāma and Daksina by combining the goddesses of both in some of its rituals. The Yamala-teachings (represented here by the Picumata-Brahmayamala) fit perfectly into this hermeneutical 'rise of kundalini'. For they are located by Abhinavagupta in this duality-devouring stream of the Kaula centre at the point at which the perfect fusion of Vāma, Dakṣiṇa and Kaula, claimed as its own by the Trika, is yet to be fully realized."31

6.5 The Five Faces of Sadāśiva

verses 169-171ab

The translation of prthagbhāvaviyogāsu may seem forced, but the first meaning that comes to mind for prthagbhāva, "separateness", would be redundant.

Among the names for the five powers $vid\bar{a}$ is just an infrequent variant 32 for jñāna, but spanda for ānanda is anomalous.

Having described the inclusive trinity of powers right from the beginning and having assigned a slightly lower slot to the Yāmala, the author now wishes to explain the transition from the non-dual cults to the "outside", i.e. to the pan-Śaiva model of the evolution of scripture characterized by the pentad of powers. He does so by emphasizing again and again that, although the pentadic form is somehow built into the structure of powers, their actual division involves more of the appearance of duality, a higher degree of limiting adjuncts (upādhi), and takes place on a much lower level of the universe. For the first time in the text our author identifies the five streams of the Śāstra with the five mantras, i.e. faces of Siva. In order to emphasize the structural principle on this layer of the universe he adds another pentad, namely that of the five angamantras.

²⁸ See SANDERSON (1997) for a detailed treatment of the issue.

6.6 Īśāna

The lengthy section that follows is a characterization of the five faces, but in-

verses 171cd-174ab

It starts with the Isana-face, which stands for the appearance of objects inside consciousness, but without a projection of duality. Since this face is directed upwards towards the light, its characteristic is that of dissolution. There is however a subtle activity of the power of action in it.

The purpose of the following verses is to differentiate this intermediate state from the manifestation of the levels below māyā. In contradistinction to spanda, which is defined as an indistinct vibration, the sphāra mentioned here allows of some activity, but is to be distinguished from the "normal" activity of the krivāśakti in the "impure path" (aśuddhādhvan) of the universe.

174ab quotes MVT 1.26. See SANDERSON (1992), p. 300ff, for a detailed commentary on this monistic reading of the otherwise purely dualistic states ment in the Tantra.

6.6.1 Non-duality of Action

verses 174cd-175

I have adopted J₁'s reading in 174c which gives the sequence śuddha, śuddhetara [= śuddha plus aśuddha] and aśuddha, and thereby avoids the awkward asuddhetara of the Ked. One could of course argue that this usage is elliptical and śuddhetara is more likely to be understood as equivalent to aśuddha rather than as a dvandva. This is not impossible: as the argument needs only examples of impurity, the "pure" could have been omitted and we might interpret 174c as "intermediate (śuddhaśuddhetara) and impure (aśuddha)" by reading śuddhetara in śuddhaśuddhetara as equivalent to aśuddha. But I think the subsequent discussion and the viśva in 174d point to the easier interpretation.

The last line is an attack on the Siddhanta model of creation, according to which Siva is not in contact with the impure levels of the universe. There lower creation is initiated by a liberated soul, Ananta, who is vested with power and authority by Śiva. It is not possible to counter the Siddhānta in this point directly, as MVT 2.24cd-25 contains one of the classical formulations of this doctrine that is quoted even by dualists. But from the perspective of the nondualists the Saiddhāntika model is flawed, because it presupposes an influence of time on Siva. The following verses are devoted to this topic by demonstrate ing that even in human experience there are instances where such a gradation ing that even in the properties for Siva, whose powers are incomparably cannot be accepted to the non-dualists that such a deism is untenable and the division into pure and impure ultimately invalid.

verses 176-179

The text is too elliptical here and I suspect a lost line after 176 that provided the

The quotation in 177cd is from the lost Tattvārthacintāmani by Kallata and appears also in the PTV and the TA. 33 In the context of the *Tantrāloka* our author tries to get a slightly different meaning out of the quotation. It occurs in a passage that describes the gradual obliteration of duality. In this process of meditative awareness of perception, differential thought (vikalpa) as well as the tutis, i.e. the sixteen moments of a perception, decrease and the thoughtfree awareness of the perceiver emerges (TA 10.200). The entry into Siva has only two tutis, one correlated with the owner of the power (śaktimat) and one with power itself. One should concentrate on the second to gain omniscience and power to act (207), because the first is merely the full and undifferentiated consciousness, in which no objects and actions are possible (209). It thus transcends the world and is not useful for the Yoga of the Śaiva householder envisaged by Abhinava. For this concentration on the second tuti, he quotes Kallata and understands tutipāta as the 'elapse of the [first] tuti', i.e. 'the second'.

Nevertheless the api introduced into the same quotation in the Vārttika and the hopefully simpler context lead to the straightforward interpretation for pāta as "duration". For a similar conception, cf. the description of pasyantī vāk in PTV, p. 4f: na hi prathamajñānakāle bhedo 'trāsphurat.

The verses up to 181 provide examples of non-duality in human perception. As 177ab indicates, the examples are taken from areas where individuals can attain to such a perfection in human crafts or art that their attention to detail is fused into a single act of intuition.

In 178d the meaning of prakarsati and the comparison of the mind with a sword is not clear. From the examples that follow, we can infer that the mind is able to extract details of perception in "no time", but applied to the sword the image is difficult to interpret.

³³ yad ähuh śrikallaṭapādāḥ tuṭipāte sarvajñatvasarvakartṛtvalābha iti, PTV, p. 103. And TA: iathā coktam kallaiena śrīmatā tutipātagah | lābhah sarvajňakartrive tujeh pāto | parā tutih 10 2001 | 10.208||. DVIVEDA (1983a) adopts the reading from the PTV in his collection of citations from lost works, but Jayaratha's commentary (TÂV 10.208) has again a different reading: yat tatıvārthacintāmaṇih 'tuṭipāte sarvajñatādayah' iti |.

According to the definition ³⁴ the figure involved "voicing the notes so rapidly" that they appear as if merging", which in western terminology might be called glissando. I cannot say whether this is achieved on a Vīṇā as on a guitar by hitglissando. Teamor all ting only the first note on one string, but the point is, I think, clear: the trained musician is able to identify the scale in a virtuoso figure that lasts only "a mo-

For dhārā (181a) in the sense of "highest limit", see TĀV 29.2, where it is understood as parakāsthā.

The preceding examples can of course work only in favour of Abhinavagupta if one accepts his proposition that the objective world exists in an undivided state before being projected outside. The first perception always takes place in one instant and contains all knowledge, which is subsequently - as in 176transformed into action. The side-swipe at the dualists is to be noted: the "nondual reality" in most of the examples is something that can only be realized through becoming an "expert".

For vāvat in the sense of "even", see APTE (1986), s.v.

pātañjali is an attested variant (MW, s.v.) required by the metre.

To demonstrate the point again and to elicit wider acceptance by adducing a sect-neutral acclaimed source, our author quotes Yogasūtra 3.33. This Sūtra stands at the end of a long section on the meditational techniques to be used for obtaining "magical powers" and proclaims intuitive knowledge as an alternative $(v\bar{a})$ to the preceding techniques.³⁵

What was described more as a Yogic technique is in Abhinavagupta's interpretation transformed into an ontological statement. The magical powers envisaged by the Yogasūtra (vibhūti or siddhi) are reinterpreted as the perfection of all things that appear.

verses 185cd-187ab verses rosetting feature of our author's theory of "supreme non-duality" that It is an interest of the little and the control of the little and duality is noted by duality is noted to explain the world we perceive, but that it also "adds" an aesthetic quality to an otherwise world we percent the series of a philosophical level the notion of a serile absolute. This concept reflects on a philosophical level the notion of a God whose creation is for his own pleasure.

verses 187cd-188ab

Abhinavagupta provides us with several explanations of the word sādākhya in Administratory in his commentaries on IPK 3.1.3.36 The present context still describes Sadāsiva, whose mantra-body is the source of further differentiation and who therefore exists as intermediate between duality and non-duality. As creation through $m\bar{a}y\bar{a}$ has not yet taken place, there is only a slight activity of the power of action; the state is still a projection inside consciousness that is characterized by the power of cognition.

verses 188cd-190ab

The insertion of the anusvāra in 190a solves two problems in this passage. It provides the predicate, and avoids the unnecessary qualification of the "great knowledge" as "arisen" (prādurbhūta-).

In a way this refers back to the objection raised in 24cd-25ab, i.e. that differential thought, which is necessarily the basis of the Śāstra, excludes the possibility of scripture being directly grounded in God as the non-dual ultimate reality. The problem was first dealt with by expounding light (prakāśa) as being self-expressive, it is here repeated with reference to the intermediate state and it will be reasserted in 413cd, where the author says that the sense of the Śāstra, up to its formulation in human language, exists in the highest God, the thirtyseventh tattva. 190ab shows that the continuity of revelation down to lower forms of expression makes the Śāstra soteriologically effective. 37

tad in 189b must refer to $\bar{u}rdhvapada$, since the continuity of knowledge is emphasized in this passage. To understand tad as $m\bar{a}y\bar{a}$ would imply an influence of the lower on the higher, which our author would surely deny.

verses 190cd-191ab

The reading of K_{ed} in 191b (aśuddhādhvavidhāv iva) would mean: "as if one's religious practise [were] in the impure [order of the universe]." But this is not

³⁴ The technical terms used here are to be found in the sixth chapter of the Samgitaranakara. in the passage on dhātus. These are sounds produced by a certain right-hand technique (prahāravišesotthāh) (6.125ab). After giving the subdivisions, the text goes on to describe the variety vistāraja, which "is called ekavistāra by other experts", prahāralāghana kṛtvā svarān ekūkṛtān iva | vaicitryāt kvāpi viśrāntah svaro vistārajo bhavet || 135 || km tstårasamjinam tam apare sürayo jaguh |. Another comparison involving a viståra on a Vina 15 See Vyásabhásya thereon: tena vä sarvam eva jánáti yogī prátibhasya jiánasyotpattövit.

³⁶ See TORELLA (1994a), p. 190, footnote 4.

³⁷ sivapradam could be glossed as sivatāpādanahetuh.

meaningful in our context, as the line should give the reason why adheren of lower doctrines are excluded from true liberation in the next verse. Surely our author does not want to say that the Vaisnava's religious practise is actually based on the śuddhādhvan, but rendered ineffective because they pretend to be

It makes more sense to assume that it is the failure of lower doctrines to recognize that the impure is not different from the pure and to pretend that their religious practise is based in and leads to a freedom from impurity. The anitude expressed in 191b would therefore refer to their inability to transcend the

verses 191cd-194ab

The nisthita in 191d serves to emphasize that their true religious identity lies in these "lower" doctrines. Whatever the outer practise for reasons of social conformity may be, it is the internal practise that defines the true status of the practitioner. 38

The syntax of the passage is odd. We would expect the construction to mean: "Just like those who are fixed in other doctrines [...] are not liberated completely, those who are consecrated as Saivas too are not [liberated]* An unbiased reader would then deduce a difference between saivasamskra and parameśānaśāstre samyag dīksita that would be accentuated by to h is however difficult to maintain such an interpretation; neither is samskra different from diksita, nor is it possible to give śaiva a sense so different from parameśānaśāstra as would justify this interpretation.

The verses state the difference between the liberating Saiva religion and the other religions that allow access to merely incomplete liberation. But within the truly liberating Saiva religion there is a difference between the systems on which Abhinavagupta bases his exegesis ("our systems", i.e. Atimarga, Trika. Krama, Kula) and "other streams": the first strive for liberation in life, while the other can only promise final liberation at death. 39

We see that Krama is mentioned here explicitly under the heading "Saivism". This confirms SANDERSON's interpretation of saiva as "one who follows the ostem taught by Siva", rather than "a worshipper of Siva", for the second system taught by spell to the Krama with its pantheon of exclusively female deities.

verses 194cd-196ab the two verses contrast the author's systems, in which liberation in life is The two verses with the Siddhanta, whose reliance on complicated ritual makes this impossible. 40

verses 196cd-197ab

leok ata eva in 196c as referring back to the end of the previous verse and to mean that because the Saiddhantikas eventually reach the highest fruit, their dectrine must reflect some of the characteristics of the higher, Kaula stream accume and in 196d is out of order (bhinnakrama) and refers to samhāradršām. sumharadri, literally "one, whose doctrine is dissolution" could in the context (see below) refer to the method of unification with a series of gradually bither tativus. This upward movement follows the "order of dissolution" www.harakrama), that is, the lower levels are progressively dissolved in the higher From the context it is clear that this must refer to the Siddhanta and the conjection, which is not at all obvious, could be provided by the identification of the main deity of the Siddhanta, Sadasiva, with nimesa in IPK 3.1.3.

kilapāda refers to the Sārdhatriśatikālottaratantra, a Saiddhāntika scripture commented upon by Bhatta Rāmakantha (II). 41 The passage, which according to Rimakantha deals with the samayadīksā, mentions an initiation that is based in the five elements as identified with the five kalās. 42 After this identification follows the controversial statement (7cd):

If you know this, o Mahāsena, you could even initiate outcastes. 43

Rimskantha interprets the line as follows: "The sense of 'one could even initate outcastes' is hyperbolical. The sense of a verb connected to the word api againes utmost 44 hyperbole, as in 'one might even split a mountain with one's

³⁸ Compare TÂV 4.25: "As he has internally resorted to it [i.e. the lower doctrine] is as based on it, and not [just] superficially in order to preserve the course of the world state. cording to the rule "internally a Kaula, externally a Saiva, but in daily life a Vadia divastale dayar di tannistho, na punak 'antah kaulo bahih sawo lokacire tu sudka

¹⁹ See SANDERSON (1997) (fn. 1) on the question whether the whole or only pure of the Atimirga are promised final liberation.

 $[\]stackrel{q}{\sim} 1\bar{A}\,37\,27a$ shows that for Abhinavagupta the Siddhānta is characterized by an (over-)em-

Er de identity of this author, see GOODALL (1995), p. i-vii. For the interpretation, cf. States

head'. It is therefore impossible that this is the object of a precept. 45 It is therefore appropriate to explain [the phrase] 'one should perform initiation of foreigners, outcastes etc.' in the same way as one would explain (vat) the splitting of a mountain with the head, – which is not to be done by force, as in the inter-

As said before, Rāmakantha was probably an older contemporary of our author and his remark must refer to pre-Abhinavaguptian interpretations of this passage, but Abhinavagupta's omission of api could well be a response to Rāmakantha's attack on the Kaulas. This "Kaula perspective", namely that Siva has hidden the true doctrine in the lower Tantras, appears for instance in Ksemarāja's interpretation of Netratantra 10.11cd-11ab which ends a description of Bhairava with the following words: "This [form of Bhairava] has been taught in all Tantras, [but] veiled, not explicitly. My intention has not been recognized by anyone, [as it is] difficult to discern in the world,"47 Ksemarāja then quotes the same passage from the Kālottara and adds: "Such secret doctrines [like initiating outcastes] would otherwise [that is, if they were not veiled] be despised." 48 From this inside view the omission of api in Abhinavagupta's quotation brings out the real sense that has been compromised by Śiva himself only not to upset the Saiddhāntikas.

6.6.2 The Emergence of Duality

verses 197cd-199ab

This verse seems to contradict the observation made in the commentary on 92, namely that unmesa is used irregularly for cit. We can only assume that this was not perceived as an inconsistency by our author, and that the meaning of unmeşa as cit in 92 seemed as obvious to him as the meaning demanded by the present context.

Here unmesa is used to denote the second of the five powers, usually called ananda, or else we have to understand cidummeşa as "the opening

45 In other words the passage, despite the optative, is no vidhi, but an arthavăda.

of consciousness", which seems unlikely because we would then expect of consciousition. More importantly, the first interpretation is confirmed by PTV

with this verse the three aspects of reality, namely non-dual, intermediate jāāna, krivā. with this completed and the description of the other faces can proceed. Išāna and dual are completed and the description of the other faces can proceed. and dual are completed. Isana is the only face among the five that has been described before and its position is istneous account is position is indeed ambivalent. On the one hand it stands for transcendence, as it is turned indeed annovation indeed annovation above, 49 but this exclusiveness is seen more as a defect, as igrevents liberation in life and cannot escape the dichotomy between pure and impure.

verses 199cd-200ab

In the comparison the kaphasamcaya resembles the upādhis: if they are absent, the powers remain in non-duality which is their nature; if present they produce duality, but this change of function does not imply a transformation of their na-

The transmitted reading in 200c seems to make sense at first sight, but for the answer (especially 201d) to make sense the emendation is, I think, unavoidable.

The opponent cannot leave this peculiar concept of limitation unquestioned. The idea of "limiting adjuncts" (upādhi) suggests something that is external to and beyond the control of what is limited. For it to be effective, according to the opponent, requires that objects change under its influence. Limitation through upādhi cannot therefore take place in a reality that is like Šiva immutable even though identical with the world.

verses 201cd-203

The verb upā-ruh is used a few more times in this text (234c, 269a). It occurs already in the phrase pramāņopāroha in the Vyāsabhāsya ad Yogasūtra 1.9. which might be the ultimate source for the same phrase in Pratyabhijñāhrda-

 $i \alpha$ in the sense of "a little" (APTE (1986), s.v.) is the lectio difficilior. As mentioned above 201d must refer to viśvātmābhede in the question. We can infer from the answer that the opponent tried to prove a division between siva and the world, and tried to do so by showing that the assumption of a non-

^{46 [...]}śvapacān api dīkṣayed ity atiśayārthaḥ | apiśabdopahitasya bhāvārthaṣya 'api pana tam širasā bhindyāt' ityādāv iva pare 'tišayapratipādanārthatvena vidhivisayatvāsamblavåd iti siraså parvatabhedavan mlecchasvapacådidiksanam atråpi kartavvam evei yakun vyākhyātum | na tu kulācāryair iva balāt kartavyam iti || The translation of the last classe

⁴⁷ sarvatantresu ca proktam pracchannam na sphutikrtam [10,10] mamāšayo na kesiņi

^{48.} ityādyatirahasyam anyathā vyākupyeta | Netratantroddyota on 10.11ab.

⁴⁹ See TÃ 15.204c; discussed in the introduction

division would lead to an inconsistency in the interpretation of *upādhi*. The argumentative structure of the question is therefore as follows: limiting adjunct gumentative structure on reality, if we assume a division between siva and the world. This is of course strongly rejected by our author, but with an opaque argument (202cd). Assuming that "silent" means "inactive" here, we might interpret it in the following way: in the opponent's, i.e. the Saiddhāntika's, account of creation there is a division between Siva and the world, that means, from the perspective of the non-dualists, that the Saiddhāntika's Śiva is not able to accommodate objects that undergo change. But as Siva is an all-pervading reality, there must be a place of contact between the world and Siva, and there - we must assume - the objects are miraculously inactive, if Siva's nature is to remain unchanged. With the absurdity of the idea proven, the author can affirm the unsurprising solution: the ontological status of Bhairava, as we have seen in previous passages dealing with the Pratyabhijñā theory of ābhāsa, is radically different from manifestation and any influence of the manifested duality on the manifesting light is impossible. Therefore the reading of Ked in 203d has to be dismissed, as it does not provide an answer to the question in 200cd. The answer cannot be the denial of upādhis and duality as in the Ked's readings, but to show that all divisions are on the side of the appearances, and not on the side

verse 204

For the opponent the discrepancy between the appearance and its source as regards their qualities is not explained, unless one would regard the one as real and the other as unreal. But for Abhinavagupta reality is the appearance of God as a variety of forms.

verses 205-206ab

The opponent brings up a contradiction: if everything that appears is real. dreams too should be real, but dreams lack the causal efficiency that is characteristic of 'real things'. The author therefore ought to clarify his definition of reality and appearance. The issue is, however, not addressed here and the reader is referred to the section about dreams (921ff, 1000ff). There the waking state is defined as the appearance of a variety of manifest forms, whereas in the dream state appearances are unstable. Despite their fundamental identity as appearance, causal efficiency is limited to the realm of duality, which means to externally perceived things. 50

50 See IPV on 1.8.6 for details.

verses 206cd-207ab

winnesa is here as in 92 and 386d, but unlike 197c, used for cit! In 933a too pronneşa seems to stand for cit, but there the case is even less clear, because promises is used for a different argument, namely to describe the twelve Krama deities as an extension of the five powers.

In the present case the reason for the choice of words might be the image of "awakening", i.e. the arising of the light in the east, where Tatpurusa resides. The metaphor of light is used for the description of the directions that come into being with the five faces, but this light is – if we are allowed to extend the image not the light of knowledge emitted by the moon, but the light of the sun, in which objects are manifested, until they dissolve, when the sun sets in the west (Sadyojāta).

verses 207cd-209ab

The author now tries to explain the name 'Tat-purusa' as 'its [i.e. the īśvaratattva's] perceiver'. The face is said to be "clearly recognizable", either because of the division between subject and object, or because it is the eastern face which is connected to the light. The details of this 'etymology' are however not clear.

It is noteworthy that neither of the usual sequences of the faces, the "vedic" starting with Sadyojāta, and the "vertical method" (dandabhangi) starting with Isvara are used here. The logic behind this sequence is probably to show that Iśana, Tatpurusa and Sadyojata form a group against the remaining three, namely ūrdhvordhva, Vāmadeva and Aghora.

verses 209cd-210ab

Here the fact that the Gārudatantras, which deal with the cure of snake-bites etc., are associated with the eastern face has to be explained, but the logical connection to the previous verse, expressed by ata eva, is not evident.

verses 210cd-211

The Gārudatantras, which would have to be dismissed as lower scriptures of purely magical, or medicinal value, acquire metaphysical legitimation in this account: their ability to avert negative influences is reinterpreted as a stabilization of a creation that is always in danger of falling back into non-duality, just like children are more easily seized by the nine grahas.

6 The Five Streams of the Śāstra

verses 212-213ab

Following the dictum that the teacher should expound the contents of scripture Abhinavagupta does not provide us with the text, but only with a summary of MVT 2.60ab. The connection of this quotation with the Isana face may not be self-evident, but becomes clearer if we look at TĀ 9.310. There the same line from the Mālinī is quoted for a definition of "superiority" as implying "the state of pervading [the lower]" (vyāptṛtā). According to Jayaratha superiority is not a temporal or spatial category, but a gradation of quality. The higher is that which pervades the lower. 51

Sadyojāta

verses 213cd-214

Although this could be taken as an answer to the question in 200cd-201ab it is part of the definition of Sadyojāta who is related to the power of volition (icchā-

verses 215-218

The idea of a disappearance of all objects in Sadyojāta is developed in order to explain the characteristic of a specific group of scriptures. We would expect that these refer to the Bhūtatantras, but there is no indication for that. The only correspondence that is established here is that between Sadyojāta and suṣupii. - mediated by icchā.52

218 makes it clear that "disappearance" is only the "manifestation of disappearance" within the light.

This short digression on reality, determinacy and the inconceivable power of God is perhaps motivated by the paradoxical description of Sadyojāta. It emphasizes the point that "unreal things" exist either as "real imaginations", or not at all, and that Sadyojāta's sleep is therefore only apparent.

6.8.1 Excursus: The Justification of Repetition

verses 224-229

Judging from the retaliation in 239 the hanta in 224cd is probably polemical. for aucitya (226) in the sense of "habituation", see PW which refers to

Kathāsaritsāgara 24.95 etc. janah sa in 226b could mean "you" as opposed to ayam janah, but the context demands a more general statement.

It is tempting to understand augha as "flood" and as referring to inundation. but kṛṣ ("plough, till") would then have to be taken very inaccurately as "cul-

ankurakandalaih in 227a could be understood as "sprouts and shoots", but the comparison with the plantain whose stem is considered to be "without essence" (asāra) is more appropriate here.

For marmasthānam in 226, cf. TAV 28.396.

The reader will welcome the lively interruption at this point. The opponent -here we might better imagine one of his disciples - accuses him of repetition and the response is a string of comparisons that aim at justifying the recapitulation of crucial doctrines. Mere repetition is of course rejected by our author

229 A similar comparison, with devotion as the axe, is to be found in Hara-

verses 230-234

Without the conjecture in 230b the contrast expressed by api would be very weak indeed.

For the identification of kapittha, see MEULENBELD (1974), p. 536.

With verse 230 the author resumes the description of Sadyojāta. Although the Bhūtatantras that are usually attributed to the Sadyojāta face are said to deal with exorcism, the actual description in 232-234 applies more to the otherworldliness of what might seem to be a Kāpālika, or perhaps Pāśupata, practitioner. 53 But in the system of the pañcasrotas the Pāśupatas (atimārga) appear as associated with Tatpurusa, and this takes places on a different level.

⁵¹ The same quotation is used in a similar context by Kşemarāja: 'yo hi yasmād gapakrabā sa tasmād gapakrabā sa tasmād ūrdhvam işyate' iti sthityā ūrdhvā višvotkṛṣṭā raśmayo yasya], Sāmbapankālūb. 52 See commentary on 50-51 for the correlation of susupti and iccha.

⁵³ By the way, the stereotype kapālamālābhāraņa occurs, for instance, in Svaechandatantra 9.31c. In Yogavāsistha, Nirvāṇaprakaraṇa, pūrvārdha, 18.10a is is applied to the mothers. It could describe Aghora in Netratantra 9.24a, but there the matter is not so clear. If we assume that the verses are construed symmetrically, i.e. that two Pādas describe one face each in 0.22.20. each in 9,23-25ab, then the attribute could indeed apply to Sadyojāta! On the other hand the text and in the could indeed apply to Sadyojāta! the text applies this description explicitly to Aghora in 10.4a.

6 The Five Streams of the Śāstra

Rather than referring to a specific group, this description seems to target ascelle Rather than reterning to use as an attempt to counter a possible would explain the critique that follows as an attempt to counter a possible objection to our author's yoga-based interpretation of the Tantra, namely that the domain of

234d is marked by the editors of the K_{ed} with a question mark.

6.8.2 Critique of vairāgya

This critique of vairāgya is soon interrupted by a question, but taken up in the second Kānda of the Vārttika.

There is a parallel in II,110-111, which attributes the idea to a "guru" 55 It seems to be a critique of the concept of detachment (vairāgya) and the corresponding yogic technique of pratyāhāra. Our verse summarizes the idea that an active withdrawal from sense objects, thought to be facilitated by pain, cannot be successful because the mental flux does not even in pain come to a standstill; on the other hand it rests and becomes detached even from a pleasant experience, if satisfied through the knowledge of the object. The conclusion in the parallel in II, 112 is that only a passive detachment can produce the falling away of mental activities. To try to actively "pull back" (pratyāhāra) from mental activity, only "cements" one's dependence on the mental flux. As mentioned by TORELLA, 56 the same idea is to be found in Svabodhodayamañjarī 12,57 but one has to consider the possibility that the phrase goes back to MVT 3.6cd (quoted in IPVV III, p. 262).

verse 236

In this verse the author tries to adduce the Yogasūtra as support for the theory that knowledge is superior to detachment. 236 sums up Yogasütra 1.15-16:

drstānuśravikaviṣayavitṛṣṇasya vaśīkārasamjñā vairāgyam | 1.15|| tat param puruşakhyāter guṇavaitṛṣṇyam ||16||

The translation of the passage is tendentious in order to make Abhinavagupta's The translation of the translati

6.8.3 Excursus: The Motive for Creation

verse 237

The expression yadi na kupyase, lit. "if you are not offended", occurs in IPV 15.12 (vol. 1, p. 201).

Despite all efforts 237cd does not yield any sense - J₁'s reading is only accepted for metrical reasons - , unless one would emend it beyond recognition. One can imagine that an elaborate word-game on duality or division was the source for the corruption, and that akānde in Pāda c is perhaps wrong for akhande (cf. TĀ 4.270a). The expression khandanadāyi in the answer would be in accord with this (241), but I would not hazard a guess at the reading.

For rasāt, see commentary on 124.

238c echoes the MVT's description of rāga: rāgo 'pi rañjayaty enam svabhogesv asuciśv api 1.28cd. 58

Despite the problematic line the argument seems to be clear: the opponent cannot reconcile a mind searching for pleasure with an eternally immaculate consciousness.

verse 239

The author did not forget the accusation of repetition, made by the opponent in 224ab, and sees his pedagogic approach justified.

verses 240-244

yoga is understood as "manner", "mode".

vipañcitam is not attested in the dictionaries, but might be glossed as viśesena (pra)pañcitam. Cf. PTV p. 59: tad eva asmābhih vipañcitam iti and Nareśvaraparīkṣāprakāśa, p. 88f.

The following passage tries to answer the objection made in 238, which concemed the contradiction between the natural "desire" of consciousness for objects, which are by nature impure, and its own purity. In 241 Abhinavagupta

⁵⁴ As SANDERSON has shown, Abhinavagupta's philosophy aims at the Śaiva householder. not at the ascetic (SANDERSON (1986), p. 202) and the higher levels of his Trika problem. Tantric asceticism with its insignia, i.e., matted locks etc. (SANDERSON (1997), fn.29)

⁵⁵ See commentary on 22.

⁵⁷ pürvair nirodhah kathito vairāgyābhyāsayogatah | ayatnena nirodho 'yam asmāblir upadisyate ||. Quoted with variants in TAV 4.257. This small work has appeared in translation in GNOLI (1989), but the text is unfortunately not yet published.

 $^{^{58}}$ Adopting the variant in the edition; see also the quotation in TAV 9.200ab.

6 The Five Streams of the Śāstra

emphasizes that the manifestation of duality in a non-dual reality does not bring about a division in the manifesting light itself. But in order to produce the appearance of duality, which is primarily the antagonism between the subject and the object of experience, the "power of Siva" has to create lower states of conthe object of experience, sciousness, in which this duality can be perceived. Those states, i.e. consciousness. ness as knowledge (mitirūpā samvit), naturally follows its objects, just like material forms are by nature inclined to dissolve into the elements from which they

verses 245-246ab

A general example to explain why consciousness, because of its fullness, has the natural tendency to flow into lower states. The same idea is quoted in II. 100-101, but no source for the quotation is known.

verses 246cd-247ab

The opponent seems to accept the natural flow towards objects, but not its selectiveness. If this selectiveness is not due to any external influence, but to its own determination, it would follow that consciousness is necessarily connected

Abhinavagupta cannot deny this, but phrases his acceptance very carefully, and then reinterprets this peculiar kind of $r\bar{a}ga$ as merely the toleration of the influence of something else, rather than a desire for something.

Sadyojāta (continued)

verses 248cd-251ab

The opponent tries to stir up another contradiction, but the author is suddenly reminded of his main topic and goes on to explain the western face of Sadāsiva in the terminology of the process of perception. The passage describes how consciousness becomes contracted and is gradually emptied of all the parts involved in the process. The completion of it leaves the consciousness in a void similar to the state of dissolution at the end of a kalpa. This is then linked to Rudra, the deity presiding over the resorption of the universe (saṃhāra).

At this point the author provides us with an overview of the correspondence

between the causal deities (kāraneśvara) and the five faces in order to show between the cause of Rudra refers to Sadyojāta. The future tense (bhavisyati) that me described and Aghora are still to be described.

The emendation of the transmitted reading kajo is based on the required sense Theemenant and Theeme help nere except which would be formed analogous to sarojin, which assume an error for kaji – which would be formed analogous to sarojin, which assume all cross an epithet of Brahmā – is paleographically conceivable and furthermore restores a ra-vipula from a Pathya Śloka.

This would lead to the following set of identifications:

Rudra Sadyojāta Tatpurusa Sadāśiva Īśāna Vāmadeva Visnu Aghora Brahmā

If we compare this list with the one given in the introduction, we note a transposition of Rudra and Brahmā. Since the identification of Sadyojāta with Rudra is corroborated by the wider context and cannot be due to textual corruption, we cannot but assume that our author has altered the identification, to which he in other places adheres, ⁵⁹ to fit his context. That this should be done with such an important category is remarkable.

In the present context the use of these deities has notable implications. As the set of kāraneśvaras sometimes includes anāśrita as the sixth, the identification hints at the correctness of the highest, sixth "stream" (srotas) above Išāna. It is perhaps also a way to suggest that in a sense Sadāsiva, who represents the Śaiva-Siddhānta, is not the deity that - as in the Siddhānta model encompasses the whole canon through its five faces, but that Sadāśiva's scope is really that of the $\bar{I} \hat{s} \bar{a} n a$ face, and that the other faces are open to a different exegesis, namely that of the Trika. In other words, to confine Sadāśiva to the upper face is to limit the influence of the dualistic Siddhanta to a part, which is

⁵⁹ Cf. Bihadvimaršinī III, p. 309: tata eva brahmahrdayo visnukantho rudratālur īšvarabhrimadhyah sadāšīvordhvabrahmarandhro 'nāśrītātmakašaktisopānoparipadah kāraņasakavigrahah paramesyarah. Here the sequence of causal deities corresponds to the normal squence of faces beginning with Sadyojāta (see introduction). Five causal deities are menlioned here in 254, Särdhatrišatikālottara 23,9cd–11 and Netratantra 7.23. Compare also Somatom, ki Somafambhupaddhati, Nirvāṇadīkṣāvidhi, 233–236, and the list in BRUNNER-LACHAUX (1971).

- as we have seen in the interpretation of 165 - excluded by the definition of the Trika. Another indication of the tendentiousness of Abhinavagupta's interpretation here is that the sequence of the five faces will culminate anomalous with Vāma and Aghora - the two faces that are part of the sadardha and there.

The required sense forces us to understand anya in 254a elliptically as any

Here the word brahman is explained in a way which reflects the capacity of these five faces or powers to remain internally undivided (199ab), while displaying division on the outside. The image of the five-faced Sadāsīva is thus expressive of this differentiated, but undivided structure, and the doctrine that every face contains all five powers, but emphasizes only one, is reflected in the notion that each of the five faces is again fivefold (378). This doctrine may also account for the fact that a clear correlation between one power and one face does not emerge from this text.

In 254 the five causal deities (kāraneśvara) to which these five faces corespond are introduced and their name explained as the 'causes' for the predominance of one of the five powers in every face.

The complicated description in 256 possibly attempts to circumvent the objection that the state of rudra, being described as "contraction", i.e. the absence of manifestation, could play any role in this stage of creation.

The quotation in 257 is IPK 3.2.1: "Such being the structure of reality, Ruha is the deity that presides over the state in which this subjectivity exclusively subsists; Brahmā and Visnu reside in the flowing of the differentiated contaable reality."60

With the passage inserted by K and $J_{\boldsymbol{\Sigma}}$ the following – metrically correct text would result:

bhinnaprameyetyādyam ca nāmtah kimtu kadācitke bhrama ityādi tacchrīmadutpalena nyarūpyata

no surraitamenterilimiterasthitau rudro "dhidaivatam | bhimaprameyaprasan brahmani *Novemberous | The translation is TORELLA's. See also his notes on the verse in Torella (1994a), p. 197.

Although bhrama is certainly a corruption of brahma, I am unable to emend Although which makes the question whether to include this into a meaningful sentence, which makes the question whether to include this passage less relevant.

verses 230-237 One will find Saiva interpretations and nirvacanas for Sadyojāta that analyse One will into one of the state ne nava reads first jāta and then ajāta through repetition. 63

As indicated above the idea of an existence of contraction inside manifes-As made and the more natural result of contraction would be the resorption of manifestation. Here the state of Sadyojāta, although 'conraction by nature, has to exist in order to interact with the other faces in the production of scripture.

6.10 Vāmadeva

Having dealt with the Isana face, which despite being the "highest" is devalued by its inability to include the lower, and also with the eastern and the western faces, which are "without essence", 64 the author now turns to the remaining two faces, i.e. Vāmadeva and Aghora. 65 The next ten verses (260-270) seem to describe Vāmadeva, but their internal logic often remains opaque.

visiam sthitam: the universe in its sthiti-phase, which corresponds to Vämadeva. The emphasis on sthiti is corroborated by 263cd.

verses 262cd-265

The identification of emptiness with the state of deep sleep (susupti) prompts a short anticipation of the passage on the five states of consciousness, i.e. waking. dream, profound sleep, the "fourth" and the one 'beyond the fourth'. For details, see the passage starting with 921cd.

⁵¹ Compare also the name ajah for Sadyojāta in Mrgendratantra, Vidyāpāda, 3.8, and ajāta

Q salyah takālam eva jātam, Rāmakantha on Matangapāramešvara, kriyāpāda 3.62.

⁶³ Compare his double interpretation of Sivantera 1.2 in TA 1.26f, which goes back to Kallata. 64 According to Jayaratha (TÂV 1.18), see introduction, p. 29.

⁶ On the vimationar, see SANDERSON (1986), p. 212–214.

verse 200 The second vibhuh is probably corrupt; perhaps we ought to read prabhuh in-

This verse shows that each of the five faces is not simply correlated to one of the five powers. There is indeed an emphasis on one power in a specific face - according to the table given in the introduction Vāmadeva should be linked to ananda and this is certainly the background for 275 -, but an emphasis of one in an organic, integrated whole. The pentad of powers works in each face and for this reason each face is again fivefold. I suppose that the author would justify this with the sarvasarvātmakavāda that he has already mentioned (cf.

This explains that the experience of void prevalent in Sadyojāta prevents the differentiation of being and non-being etc. The conjecture in 269b is based on the quotation in the next verse.

The source is Utpaladeva's Ajadapramātrsiddhi 1: yathā sadasatām naiva viśeso 'sti nijātmani | jadājadānām apy evam nāsty asāv iti niścayah ||

In 271b one Śāradā mistake can lead to the opposite sense: J₁'s reading vimrsta could mean "becoming conscious of own and other [and thereby obliterating it]". But cidanuprāṇanā is more naturally connected to supporting differentiation. Cf. IPV, vol. 1, p. 242: iti tadanuprānitā vikalparūpatā.

verses 273-274

 $v\bar{a}mah$ in 274d could mean just "adverse to", but the preceding two lines suggest this more witty interpretation.

6.10.1 Vāma as Beauty

Here the general characteristic attributed to the "left stream", i.e. the technique of attraction in erotic magic, is reinterpreted as an expression of the aspect of āṇaṇda and saubhāgya. Elsewhere (TĀ 38.27d) Abhinava talks of this stream as being interested mainly in magical powers.

verses 278-279

This describes the desire for appropriation as the main focus of meditation in

he Vama. The na transmitted in all the sources in 279b does not make sense, but is an understandable scribal error.

verse 280

The introduction of the quotation by $tath\bar{a}$ evokes suspicion about its authenficity. The tathā – with or without the following verse – would have to be a comparatively old insertion, since all sources transmit it. But more important than the decision to retain or dismiss the verse, is the question as to its source: it occurs in the Nityāṣoḍaśikārṇava (4.46), which is sometimes thought to be not necessarily later than Abhinavagupta, but a work of which he was not aware. The historical implications of this quotation might lead one to argue that this is one of the "floating verses" which appear in different works, but until more works which actually contain it are brought to light, we must assume a direct quotation. The possibility of the verse being interpolated in the Vārttika does not solve the problem, as our author quotes it again in the Parātrimśikāvivarana (p. 229)66 and adapts it in TA 5.94cd-95.

DVIVEDA had tried to defend the theory that Abhinava knew the Nityāsodaśikārnava by referring to the phrase nitvātantravidah in TĀ 28.123, whereas GOUDRIAAN thought that Abhinavagupta did not refer directly to this text. 67 In the introduction to the second edition of his Nityāṣoḍaśikārṇava DVIVEDA reaffirms his conclusion by presenting more evidence: "It is now established beyond doubt that during Abhinavagupta's time the Nityāsodasikāmava was a well-known work, as he mentions not only the 'knowers of the Nityātantras', but also quotes from the Nityāsoḍaśikārnava [the verse $\frac{1}{2} \sin \left(\frac{1}{2} - \frac{1}{2} \right) \sin \left(\frac{1}{2} - \frac{1}{2} \right)$ phrase e-okāragatam bījam."68 If we take into account Jayaratha's mention

 $^{^{66}}$ See GNOLI (1985), who refers to the $V\bar{a}$ rttika, translates 28I-283 and provides further

⁶⁷ GOUDRIAAN AND GUPTA (1981), p. 60.

⁶⁸ abinawaguptena na kevalam nityātantravida eva smṛtāḥ (upo. pṛ. 8), api tu parātrim-tikas. ilayas tatvavivekäkhyävyäkhyäne (pr. 229–230) tena nityäsodasikärnavasya 'kämena kāmayet' (4.46) iti, 'e-okāragatam bījam' (1.100) iti ca vacanam api smaryata iti nūnam laya samaye grantha esa prasiddha äsid ity atra nästi vivädasyävasarah [, p. kha.

of a long commentarial tradition on this Tantra, 69 one can only agree with of a long commentarial distribution, why this text is quoted by Abhinaya DVIVEDA. More intricate is the question, why this text is quoted by Abhinaya in the Vārttika for the explanation of the vāmasrotas. Was it seen to be a comparatively recent text that – despite propagating a pantheon that is quite different from Abhinavagupta's religious world – inherited material from the almost extinct vāmasrotas, such as this peculiar exegesis of kāma? This could at least explain why Abhinava quotes this Tantra, whose position in the Śaiva canon is marginal, "being known in this canon only to itself". 70

The two earliest commentaries on this text that survive are the Rjuvimarśini. by Śivānanda and Jayaratha's Vivarana. The verse in question is introduced with the assertion that merely by knowing this practise the mantra-practitioner is transformed into Kāma. Śivānanda then interprets the cryptic verse as describing the yantra of Kāmarāja and assigns its five parts, i.e. kāmastham, kāmamadhyastham, kāmānkuśaputīkrtam, pāda c and pāda d, to the five bijas of Kāmarāja: hrīm klīm aim blūm strīm, 71 which express the five forms of Kāma (kāma, manmatha, kandarpa, makaradhvaja, mohana). 72

This reinterpretation of a key term of this system of the left stream is intended to show that "desire" - from the higher perspective of the Trika - describes not a technique to gain magical powers, which according to Abhinavagupta is the main aim in this part of the tradition, but in fact only an aspect of the allencompassing process of perception: the appropriation and enjoyment of the object.

yogena vijinatamatrena gurumukhal labdhamatrena, anusthanam vinety arthah sabbakah adhigantā | madanāyate svayam kāmo bhavatīty arthah || śrīkāmarājayantram iba kāmastham iti atra bījapañcakam vestanam sādhyam konasatkam cakram ca kāmašabdenocyate | bījapañcakam tāvat hrīm klīm aim blūm strīm iti | kāmastham kimarūpena hrīmkārātmanā sthitam yad bījam tat | kāmamadhyastham kāmasya klimārasya madhye sthitam | kāmodarapuṭikṛtam uktam tad etad bijadvuyam kāmasyaimāl rātmanah satkonarūpasyodarena putīkrtam | kāmena kāmayet kāmam iti | atra dvitīvinal kamasabdah karmavyutpattya sādhyam abhidadhāti | tat sādhyam DviveDi's edibin notes a reading sådhavet for kåmayet.

petses 282-20300 [1.8] the kimkaras are part of the pantheon of Tumburu, i.e. the form of Śiva worshipped in the vāmasrotas.

verses 283cd-285ab Verses 20,500 Lam not sure whether my conjecture in 284a is beyond doubt, but the transmit-Tam not suit to the training of prāṇa and subtle body", the training of prāṇa and subtle body", is even more doubtful. The of tattva- in 284c is also suspicious.

verses 285cd-286ab The text now turns to an explanation of the four powers that are present in the pantheon of Tumburu.

verses 286cd-287

It is clear that the four powers of Tumburu are reinterpreted in this passage as partly congruent with the standard set of five powers, but the -vidikriyāh in 288b poses some problems. vidi is the form of the root in the Dhātupātha (vidi iñāne) and a more natural translation would have to understand vidikrivā as the "act of knowing". 73 But as four powers are demanded by the context, vidi must stand for knowledge and kriyā for action. unmesa again must stand for cit, while ānanda could be symbolized by Tumburu in the centre of the pantheon.

Furthermore the inconsistency in the iconographical description of Tumburu mentioned by GOUDRIAAN 74, namely the anomalous five-headed Tumburu in the Netratantra (11.3), can be explained - on a theoretical level - with Abhinavagupta's theory of Tumburu being the fifth in the middle of four powers, but being subdued by them.

verses 288cd-289ab

We have seen above that the transition from one face to the other is nowhere clearly indicated in the text; there might be an intention behind this apparent lack of structure, namely to suggest that the five faces of Śiva form a single indivisible process: the five powers are a dynamic whole, which is differentiated only through shifting preponderance. From this perspective the present verse can be interpreted as describing two aspects of the nature of Siva: his nature as Vama, i.e. as connected to four powers, as well as Aghora, whose nature is to obliterate prior differentiation and who therefore does not really allow a "count-

219

ing" of these powers. Formally the verse is a connecting verse typical for our

6.11 Aghora

It has been mentioned above that the sequence in which the five faces are introduced starts with those that play only subordinate roles in the Trika; ending the sequence with Aghora emphasizes the segment of the canon that deals with

In the following account of the southern face, Abhinavagupta argues as follows: since Aghora is related to the non-dualistic Śāstras, the power that manifests this face, i.e. the power of action, is interpreted as that which nullifies prior division, thereby conforming to his description of non-duality as a rejection of duality. The aspect of resorption inherent in this concept accounts for the destructive practices prevalent in this part of the tradition, 76 but its fundamental structure, namely the "uprooting of duality" shows also that it is superior to the

We might add another thought: the doctrine of unification through action that our author expounds in the sequel can also serve to explain the working of ritual action. Unlike the Siddhanta the Trika has the problem that in order to explain how initiation can produce the liberating unification with Siva, it has to reinterpret action as producing or embodying knowledge. But if the power of action necessarily leads to unity, ritual action too, besides expressing the underlying unity of the factors of action, will lead to this unity. 77

The qualification "carefully" (sādaram) indicates that we are not dealing with outright destruction, but as with a controlled fusion.

verses 292cd-294ab

The "subtlest power" is cit.

parāvadhau, lit. "in the highest limit". The transmitted reading purāvadhau is meaningless.

The description of kriyā evokes the image of a ferocious emaciated goddess

 $_{\text{that is eager to devour the offerings made by the devotees and becomes full in}$ the process. 7

6.11.1 Unification Through Action

The question prompts a discussion on action (-308ab) and its agent (308cd-The question of the question o with the kriyāšakti. Abhinava's position that the power of action corresponds to the non-duality inherent in the Bhairava scriptures of the southern stream indicated subtly in 289cd – is now restated and defended.

verses 295-300ab

The author counters by adducing a grammatical parallel, 79 namely the status of actions as expressed in verbs. There is a discussion of this in Kaundinyabhatta's Vaivākaranabhūsanasāra:

"With this in mind it is stated in the Vakyapadīya - see there - that 'the activity $(bh\bar{a}va = kriy\bar{a})$ described with verbal endings is non-existent'. And this activity [cooking by default] is said to be diverse in form: blowing [?the firel, heating [the pot] from below and effort. For it is proven by experience that the knowledge of those diverse [activities] is [understood] from the sense of, for instance, the verb 'to cook'. And this [manifoldness] does not entail a multiplicity of meaning."80

This proves for our author that not only in language, but also in reality, action has the power to unite objects. But in 296cd-297ab he wishes to go further by saying that this fact of daily experience and of grammar is only explicable if we assume a single reality of which these constituents are interdependent parts. The problem posed by objects with different natures becoming one through action therefore cannot occur; action only makes manifest the underlying unity. In 297cd-298ab the opponent introduces the view that "cooking" is just the name

6 The Five Streams of the Sastra

300ab "For the same reason" refers to 297ab. verses 300cd-301ah

The opponent disagrees with the theory of unification through action and at the opposition of perception, in which different causes are involved that the

verses 301cd-304ah

Our author emphatically rejects this view and shows the inconsistency in the opponent's argumentation: in order to explain action we cannot but assume the the difference between, for instance, the faculty of sight, the lamp and the metal process is ultimately unreal. If they were separate entities, no single read could ensue from their cooperation.

verses 304cd-308ah

This concludes the discussion of the power of action.

6.11.2 The Agent

verses 308cd-309ab

Starting from the assertion that Siva is not divided by the results and agents of actions, the opponent raises a question on the concept of the limited agent in contradistinction to the universal agent Siva: Even if we accept that Sivas power of action unifies objects and thereby destroys division, it is not clear by the limited agent, i.e. consciousness identified with a body, relates to this pro-

verses 309cd-310ab

Without the emendation to iti the sentence hardly makes sense. I take iti to met the repetition of the opponent's phrase "katham paśavah kuryuh". For Ahlinava the question is evidently self-contradictory and therefore rejected

The creation of an earthen pot is one of the stock examples used in Indian logs. to discuss causation, especially to distinguish the efficient ('potter') from the instrumental cause ('clay').

verses 311cd-312 reries 311cu ...
The api in 311d is, I think, out of order (bhinnakrama) and refers to "the potter". As the sequence of the three lines as transmitted in all manuscripts does not

As the sequence of the argument, I have moved what seemed to be the conclufollow the logic one other slight oddity in the text as transmitted, namely the sion to the critical state of the beginning of a line, but after a first line of objection, can thereby also be resolved.

ereover the state of the agent with Siva that is effective in causation. If it is only all individual causation is only Siva's causation. The opponent now reverses the all individual argument and says that if it is this non-difference of the potter with Siva, then the potter would partake of universal causation and would in a sense also be the agent in the production of a cloth, 81 and therefore everything else, as Śiva is the cause for everything.

verse 313

After this preparatory argument follows a serious objection: The law of karma. i.e. the future effect of actions on their agent, would be rendered invalid by this theory.

verses 314-315

This describes our author's concept of karma and at the same time immunizes his position against any objection: there is in fact no result of past actions, but only for those who have this insight. In other words, objections are useless, because those who do not understand this theory are indeed bound by karma.

This is a side-swipe against the Saiddhantika, who maintains that in order to be finally liberated at death, the initiate has persevere in his daily observance in order to nullify the karma that is incessantly building up. 82 His life after initiation is seen merely as the rest of his prārabdhakarma, which continues like a potter's wheel, but is destined to come to an end. 83

The dualistic Śaiva-Siddhānta explains the unliberated state with the concept of mala - an impurity conceived as a substance that has to be removed by initiation -, with māyā and its products, whereas Abhinavagupta's interpretation of mala is based on MVT 1.23cd which defines mala as ignorance. 84 Accord-

⁸¹ Weaving is another craft adduced as an example for creation.

¹² There are of course exceptions, like the nirbija-dīkṣā for those who are incapable of performing samaya, but this seems to be more a social compromise than a convincing extension of the doctrine.

⁸³ See SANDERSON (1995), p. 40f.

³⁴ See TA 9.68ff, and 13.41cd-128. For the dualist's concept of mala, see Rămakantha's com-

ing to his school this "impurity" (mala) falls into three parts, \bar{a}_{nava} , $k\bar{a}_{ma}$ which means that both $m\bar{a}y\bar{a}$ and karma are rain. ing to his school this school that both $m\bar{a}y\bar{a}$ and karma are reinterpreted as

Abhinavagupta here describes and refutes the theory of an inactive, merely ex-Abhinavagupa net periencing consciousness whose "agentship" is only apparent. For our author this would contradict the nature of consciousness, but the opponent steps in by adducing the Sāṃkhya doctrine of an active prakṛti that binds the inactive soul I understand this as a philosophical pattern introduced by a Saiddhāntika who when talking of prakrti, means $m\bar{a}y\bar{a}$, which in his dualistic system is different

By rendering vrthā not adverbially ("wrongly"), but rather freely as "nonsense", the translation intends to capture the cumulative effect of the intensive jegipate ("to assert obstinately"), vṛthā ("wrongly") and the derogatory description of those who adhere to this doctrine as misguided. The force of grhe is not clear to me (perhaps "privately"?).

In TA 10.46-50 Abhinavagupta allows a metaphorical interpretation only if there is a real entity or quality to which the metaphor refers.

verse 321

I suppose that parigīvate implies "taught in the Śāstra".

verse 322

As far as I can see the verse only makes sense if we understand prayojana in the sense of prayoga.

verse 323

The second line is possibly corrupt, at least not understood by the present author. In the first pada the transmitted text is unmetrical; without an intelligible second half the conjecture is of course extremely tentative.

Here the opponent, or a disciple, offers a solution for the dilemma of an active self thought to be identical with an inactive God.

This verse might be directed to his young students, but could also be just the usual insult of the pūrvapakṣa.

In other words, a differentiation in these three qualities is not sufficient to ac-In one a count for individual agentship, because these three qualities always coexist as

In translating this set of question and answer (328–329), I took nanu as an potentials. indicator for the question; but 328 could also be the objection, weakly indicated by kim, and 329 the answer. 329 would then run smoothly into the next verse, but leave *nanu* as introducing the answer – which is very unlikely.

verses 330-334

Abhinavagupta now reduces activity to a quality of knowledge pertaining to God. The conjecture in 332b is only an attempt to get some sense into these difficult verses.

verses 335-338

This is a short discussion of various theories which are then rejected. In 338, for instance, the possibility that the self is the agent not by virtue of its own activity, but by manifesting universal agentship through its qualities, is briefly

verses 339-340ab

This, however, would conflict with the theory of liberation. If the presence of those qualities alone would be sufficient to experience the result of actions, then -given the pervasiveness of the selves – a liberation from karma is not possible, as their presence in other selves would be enough for a reappearance of karma.

verses 340cd-342ab

From here on follows the author's conclusion. If God is the ultimate cause for every part of a complex process that seems to have its own causes, nothing remains to be done for the individual agent.

verses 342cd-344ab

The universal causation by God extends even to the minute details. This conelusion, derived from the Pratyabhijñā doctrine of manifestation and of God's

6 The Five Streams of the Śāstra

absolute autonomy, leaves nothing to do for the individual. 343cd could also be read as another attack on the Siddhānta concept of indirect causation through

verses 344cd-345ab

It is of course impossible to say whether the Śāradā manuscripts used for the Kar actually read the avagraha in 344d, but 'bhede would not serve the argument

This settles the question on *karma* that was raised in 313. There is no indvidual soul that could independently of God create karma or be influenced by

verses 346cd-347

The author finally takes up the main thread of argumentation by identifying the power of action with the southern face (Aghora),

parā in 347b could also mean that the kriyāśakti or the Aghora-face is identified with the parāśakti. 85

verse 348

Here the fact that Aghora is directed to the South is "explained" with the second meaning of the word daksina. The second line is not clear to me.

verse 349

The opponent, probably accepting the previous argumentation, wonders whether anything can ever become an agent. But for Abhinavagupta, who seems to understand bhavah as "beings" rather than just "things", this is the starting point for a description of the liberated state.

In order to put the doctrines connected to this face into the right perspective the following passage has to show how this power of the southern face is responsible for liberation and is therefore appropriately called "non-terrifying" (aghora) and "kind" (daksina).

verses 353-354ab

This is a quotation of MVT 3.33. There the powers of Siva that are "not terrifying" are attributed to the goddess Para. In the preceding two verses in the MVT the terrifying powers had been attributed to Parāparā and the "extremely terrifying" to Apara.

The quotation is of Spandakārikā 48, which is also quoted in TĀ 13.266. The verses 354cd-355ab The quotation 17 The quotation of the qu fea is also ascertified the emphasis must have been on 'jñātā' to which I have perefore in the translation subordinated the other attribute 'svamārgasthā', which, by the way, is omitted in the parallel (TA). For the different interpretations of the commentators on this verse, see DYCZKOWSKI (1992).

6.11.3 Phonematic Emanation

The power Para mentioned in 354 is not only one of the three powers of the Trika, 86 but also a name for the highest form of speech (parā vāk). In his attempt to associate the power of action, the goddess Parā and the highest level of speech, Abhinava now proceeds to give an account of the "great creation" (mahāsrṣṭi), i.e. the creation that starts with the Sanskrit alphabet. 87

verses 355cd-357ab

The transmitted reading is metrically faulty and an emendation to krodīkrtau seems to be the only way out.

The first creation that appears when the power of action "opens up" is the Sanskrit alphabet in its normal order $(m\bar{a}trk\bar{a})$, ⁸⁸ i.e. from a to ha. This happens on the highest level of speech ($par\bar{a} v\bar{a}k$), where a differentiation of letters has not yet taken place and they therefore appear only in an abbreviated form. This indistinctness expresses itself on the phonetic level through the grammatical rule of contraction (pratyāhāranyāya) according to which the combination of the first (a) and last letter (ha) of a series encompasses all that lies in between. The lack of differentiation in this contraction is expressed by the bindu, the dot that represents the anusvāra and is interpreted as the undifferentiated reality. "By resting in the bindu" the first articulation or awareness of sound is that of "I" (a-ha-m).

⁸⁶ See Sanderson (1990b).

¹⁷ See PADOUX (1990), Chapter 5: Phonematic Emanation, and especially p. 306ff. 38 See TA 15.115cd-120c for the ritual placement of this series of letters onto the body

verses 357cd-365ab

In this passage the importance of the Śāstras created from this face is empha-

One might consider to emend *bhava* in 362a to *abhāva* in order to add a fourth state of absence of both fullness and emptiness.

vāmācāra in 364d is translated as "transcendence" according to a definition given in TA 15.278, where the practitioner is enjoined to perform the ritual with the impure left hand, "as it goes against samsāra" (samsāravāmācāravān). which is explained by Jayaratha: "The [practice with the left hand] is opposed to the world of transmigration, excluded by the world and therefore a secret

The point of samkalpasatyabhāva in 364ab is not clear to me.

verses 365cd-366ab

My restoration of the verse with three conjectures can only be called tentative, but e and o in Śāradā are easily confused and the tra in trasta can be explained

The verse asserts that the religious practice based on this phonematic emanation inherits the main quality of the kriyāśakti described above; its powerto

This "great creation" (mahāsrsti) 90 is not on the same spatial and temporal level on which all processes of creation and resorption are supposed to take place. To interpret it only as the first creation, i.e. one preceding 'normal' srsti, is thus not

verses 368cd-370ab

The correlation of Aghora with the kāraneśvara Brahmā, which - as we he have said above - is anomalous, concludes the description of the five faces as identified with the five powers and the five kāraņeśvaras. The series starting with Iśāna/Sadāśiva and ending with Aghora/Brahmā is the following: 91

vaktram kārana śakti sadāśiva iñāna

īśvara tatpurusa rudra sadyojāta visnu vāmadeva kriyā brahmā aghora

See 80 for the quotation from his own Bodhapañcadaśikā.

⁹¹ See the tables in the introduction and 252.

Section 7 The Three Divisions of the Śāstra

verses 374-375ab

The following section, which concludes the first chapter of the Vārttika on the pañcasrotas (i.e. 15–399), has been excerpted by Jayaratha in his commentary

The editors of the K_{ed} of the $V\bar{a}rttika$ supply a short explanation that is based on Javaratha with 374.

What follows is a description of how the divisions of the Śaiva canon come about on the lowest level of speech, where we can finally talk about texts; even if they are still taught by deities to other deities and not yet "brought down to earth" by avatārakas. The first group of texts is the so-called Siva division, ten texts which are attributed to specific combinations of the five faces: (1) Īśāna emerged, (2) Īśāna emerging, (3-6) Tatpurusa and Sadyojāta emerged and emerging, (7) the three together, (8) Isana and Tatpurusa, (9) Isana and Sadyojāta, (10) Sadyojāta and Tatpurusa.

This arrangement also explains why these three faces are excluded from consideration in the Trika (sadardha). As they stand exclusively for duality, their scope is too limited to be integrated fully into the non-dual schools.

verses 375cd-376ab

Jg's reading in 376b ("in the division called Siva") is equally possible.

verses 376cd-377

As we have seen the three faces Isana, Tatpurusa and Sadyojata represent duality; the combination of these with the left and the right face therefore produces a group which is supposed to teach a doctrine that is intermediate between dualism and monism.

If we ignore the interpretation in TA 1.18 for the time being, we seem to If we ignore drow of six. The most straightforward interpretation is to form have three groups of six. The most straightforward interpretation is to form have three groups of two by combining Vamadeva and Aghora with the three faces mengroups of two of the three groups can be formed, similar to the description of the tioned before. The states of emergence. I concede that -udbhavaih in 377b contradicts this interpretation, but I cannot see another way of forming three groups of six. Instead of resorting to more complicated interpretations one might consider emending boldly -udbhavaih to -bhūtakaih.

The problem with this verse is that it cannot be brought in line with the description that Jayaratha gives of the rudrabheda, a description that is presumably based on the Pūrvapañjikā. I do not think that there is a problem of conany based on author, for instance, describes the stages of *ānanda* differently in the TA and the second Kanda of the MVV without losing a word on the discrepancy. But if the assumption that the Pūrvapañjikā was an earlier work that was partly superseded by the $V\bar{a}rttika$ is correct, then the fact that Jayaratha's explanation is based only on the earlier source is noteworthy.

verse 378

Javaratha's testimony gives interesting readings, but in this case, where it is likely that they stem from another text that might have had a slightly different version of the same verse (i.e. the Pūrvapañjikā), conflation should be avoided. Cf. SANDERSON (1990b), 12.34-39, for the idea.

verse 379

I doubt that the transmitted reading nāpunaruktatā ("nothing that has not been said before") in 379d can be made to yield sense in this context. Jayaratha states in a slightly different context that there is no repetition in the combination of faces, and I cannot see what our author should have meant by the opposite.

verses 380-382

I have taken the repetition in anyānya (380a) as indicative of a distributive sense, rather than in the normal sense of "mutually" etc.

The passage emphasizes that the whole Śaiva Śāstra is valid, i.e. leads to true liberation. But as we have seen in 194cd-195ab there are differences as to whether this is accomplished directly, that is during one's lifetime, or gradually and slowly through further stages. For 380d compare the passage quoted in TĀV 13.303: yataḥ śivodbhavāḥ sarve śivadhāmaphalapradāḥ.

The position of this affirmation immediately after the Siva- and the Rudradivision is intentional: the scriptures that follow, i.e. those associated with

¹ Translated in the introduction p.28ff.

Bhairava that are supposed to teach non-duality, naturally lead to Siva, but at Bhairava that are supposed that also the non-ultimate doctrines of the convergence of the supposed that also the non-ultimate doctrines of the convergence of the con this point it is again emphasized dualistic and other Śaiva Śāstras must eventually lead to Śiva, because they

verses 383-384

Bhairava facing south (i.e. symbolizing death) expresses the characteristic of Aghora/kriyā, which is to destroy duality, through his colour. To use a modem image, he is the "black hole" into which $m\bar{a}y\bar{a}$, i.e. the appearance of an external

The quotation is from Vijñānabhairava 85: "All space which rests in the hear one should contemplate as Bhairava. Into all that which is the reality of the splendour of the form of Bhairava one should enter,"2

In his commentary on this verse Śivopādhyāya quotes the Vārttika, but includes in his quotation two lines with the nirvacana of the word linga that cannot be traced.3

It is impossible to say whether there were in Śivopādhyāya's times records of different states of the text, or - if the hypothesis of the Pūrvapanjikā containing a prior version of this doctrine is true - a conflation of both texts. In any case in seemed advisable to base the edition on the evidence of the manuscripts only.

It is probable that Abhinavagupta, like Śivopādhyāya, wanted to understand mūrdhni in 385c as "heart", as the Aghora-mantra itself ("om hum aghorahrdayāya namah") contains the word.

verse 386

Pādas a and b are quoted from the Vijñānabhairava (verse 85). The metrical fault in pada a appears in both editions of the text and is ignored by the translators (SILBURN and SINGH). Since the verse that follows in the the translations with evam eva, but is metrically correct, we have Vijiānabilairava audicini in the manuscript tradition of the Tantra. This must have spread through scribal 'correction' to the manuscript transmission of the have spread through that Abhinavagupta did not hold metrical faults as an Vartika. As I assume that Abhinavagupta did not hold metrical faults as an Variation 12 Variation of Tantric language, both the archetype of the Tantra and acceptable reads of the Vārttika should have read something which completes the ra-vipula which is frequent in this Tantra. On the other hand there is another unmetrical passage in the Vijnānabhairava (77b) which cannot be explained away easily. śivopādhyāya interprets durniśāyām as a night with clouded sky.

This verse is obviously meant as a condensation of the techniques mentioned in the Vijitānabhairava that can be quoted in favour of Abhinavagupta's description of the darkness of Bhairava. The general idea seems to be based on the "meditations" in this Tantra, but the details are open to interpretation.

verses 388-389

The preceding passage was apparently intended as an explanation for the idea that in this process of dissolution the four faces lose their differentiating potential and can only give rise to non-dualistic scripture.

verse 390

The sixty-four Bhairavatantras are formed by multiplying the sixteen mentioned in the preceding verse with these four aspects, the source of which is not known. 4 yugapat indicates that these scriptures are beyond time and duality.

verses 391-392

391a contains a metrical fault that could be averted by reading, for instance, śambhu for śiva, or śarva (in order to avoid conflict with 392).

The $tath\bar{a}$ ca in 392b is transmitted in only one manuscript of the Kashmirian edition of the text and should be secondary according to SRINIVASAN's rule

The author has now completed this account of the structure of the canon, that is, the descent from the higher level of speech, which is the Trika's own, to the

² linam mürdini viyat sarvam bhairavatvena bhāvayet | tat sarvam bhairavākāratejastatum

 $^{^4}$ Jayaratha's treatment of the same passage in his commentary on T \bar{A} 1.18 does unfortunately 5 See SRINIVASAN (1967).

fivefold reality which finally culminates in the Aghora face, furthermore the fivefold reality whiter finally creation of concrete scriptures from those five faces, and the three-fold classic creation of concrete scriptures. The Trika, according to the preceding creation of concrete scriptures. The Trika, according to the preceding descriptor, fication of those scriptures. The Trika, according to the preceding descriptor, is more or less a special combination of the Aghora, the Vaina and the high est (\(\tilde{u}\)rdhvordhva\) face. But this is not enough for Abhinavagupta. For him the est (*irrahvoranva*) race. The threefold division of the Section of the few verses that conclude this chapter. The threefold division of the Śāstra into Śiva. Ruda and Bhairava, i.e. the state in which the utmost diversification of doctrine takes place, suddenly reduces the pentad to an underlying trinity. In other words, even on this comparatively external level the reality is that of the Trika rather than the Siddhanta. It is then only logical that the Trika cannot remain higher than and in antagonism to the Siddhanta, it must incorporate it as a lower level.

verses 393-394ah

This connects with verses 50 and 20cd by alluding to the equilibrium of these three powers in the highest stream. There are other ways to understand vibhinna, but the most likely interpretation is that the pentad of the Siddhānta is only an extension of the Trika, whereas the latter remains a scripture of greater essentiality for the specially qualified.

verses 394cd-395ah

As we have seen in 160 the Trika was conceived of as a combination of three streams out of six, namely the "uppermost" (ūrdhvordhva), the Vāma and the Daksina. Here the fusion of the three results in the Kaula that has absorbed the characteristics of the "left" and the "right": "The essence of all the Tantras [i.e. the uppermost], when resting on the left and the right and fusing into one, becomes the Kaula [level] in the Trika."6 There is also evidence that this is a description of "ritual reality".7

verses 395-397

The reading of TAV 1.18 is exceptionally accepted in 396ef because it avoids the redundancy of -trayam/-tritayam.

The verse is a description, not of the basic structure of the Trika as sadardha. but of the deity Triśirobhairava, which obviously encompasses not only the left and right stream, but also Isana! We can only speculate on the background of this doctrine; possibly it is meant to account for peculiarities in the worship of this doctrine, possible of the same name. 8 Jayaratha notes that the Trisirobhairava in the lost Tantra of the same name. 8 Jayaratha notes that the Trisirobhairava is a samānatantra (TĀV 4.251), which can only mean that it is Trisirobhanava of the Trika, a level which accomodates even the Siddhānta? on a lower level the Siddhanta? Was the deity Trisirobhairava worshipped with the three heads Isana, Tumburu

Apart from the reason mentioned above, the reading accepted from TĀV Apart from 1AV 1.18 contains a more plausible attribution of powers, for apara, which symholizes duality, should stand for Īsāna and Parā for Aghora (dakṣa), not vice versa.

verse 398

This verse is the conclusion drawn from 396. If Bhairava, i.e. the Kaula deity, encompasses the three powers that correlate to \$\bar{u}rdhval\bar{1}\sama\and\$ and Daksina, then those scriptures are rooted in the Kaula stream and eventually lead to the goal as defined in this essential Saivism, namely the freedom from duality and contraction.

The details of interpretation are however less straightforward: judging from the context kula is used here as scripture of the Kula. As Tantras and Kulas are mentioned, it can only mean that Tantras denote lower scriptures and Kula "higher" ones, but it is not clear whether "Tantras" means only the Siddhanta scriptures, or includes those of the Vama and Daksina stream. Judging from the use of the word in one passage of the Jayadrathayāmāla9 the latter seems more probable. For the use of the word, compare also Śrīkanthī (prose passage following on verse 5).

verse 399

The first chapter of the Vārttika ends here with the quotation of the word jñānacandra from MVT 1.1., thereby implying that the preceding chapter was an explanation of the implied meaning of these two words. 10

⁶ asesatantrasāram tu vāmadakṣiṇam āśritam ekatra militam kaulam srīṣaḍardhalas sane | TA 37.27.

Appendices

Appendix 1 The Śrīkanthī

The following appendix is a transcript 1 of the singular fragment of this important text which was discovered by Prof. SANDERSON in the Nityādisamgraha[abhidhānapaddhati]. In the Paddhati the text is called Śrīkanthī; Ksemarāja uses the same name, 3 but also Śrīkanthasamhitā4 and Śrīkanthīyasamhitā.5

For several reasons I have not tried to edit the text: most of the names of Tantras in the many lists cannot be verified easily, and the characterization of scriptures are, without access to the texts that are described, difficult to follow. Even the emendation of corrupt passages is on insecure grounds, because there are more original "aiśa"-forms 6 than in some of the parallels. In other words, if one focusses on the text of the Śrīkanthī itself, there is the dilemma that, in order to understand the text, parallels are needed that are more "correct", but the more correct may still be secondary.

Before an edition can be attempted it is therefore necessary to compare the lists with parallels. For the list of the twenty-eight Siddhanta-Tantras this has been done by GOODALL (1995), and for the sixty-four by SANDERSON (forth-

For the present purpose, that is, to understand the possible influence of the Srikanthī on Abhinavagupta's philosophy, a transcript and a table of contents will nevertheless be instructive, even if the text remains partly unintelligible. Although I have not been able to trace a direct quotation from this text by

¹ This appendix is based on the results of a reading group in Saiva manuscripts formed by Dominic Goodall, Harunaga Isaacson, James Mallinson, Judit Törzsök and the present author, during which a transcript of the first 150 verses of this text was prepared.

89-101 Several topics. Definition of Kula and Kaula in 99-101; the quotation in TAV 29.4: kulam śarīram ity uktam is perhaps of 99a!

102-103 Vs. 96: śaktipāta and dīksā; vs. 97: prasādamantra. The division of the Saiva canon into ten and eighteen is mentioned in 102; thereafter, in verse 103, the chapter on the seventeen-fold śabda is concluded.

104-107 Here the five streams are described as the source of revelation. A list attributes the different kinds of knowledge, i.e. worldly, vedic etc., to the five faces. See introduction, p. 14.

108-112 List of the twenty-eight Siddhānta-Tantras. See GOODALL (1995), p.228 and 233, for an analysis of this passage with all early parallels and

an edition.

113-125 Here the twenty-eight Tantras are described as coming from parts of the body of Siva. For an edition of this part of the text with the help of a parallel in the [Pauṣkara]pārameśvara, see GOODALL (1995), p. 230–31. The readings of the Pārameśvara are only given here where the text of our manuscript is clearly wrong. 126-151ab Several topics: tarka, sambandha, bheda, artha, paksa.

151cd-155 The twenty-eight Gāruḍa-Tantras.

156-166 Subdivisions of the Gāruda-Tantras.

167-200 20 Bhūtatantras (167cd–169) (with further characterization).

201-219 Verse 201 seems to start a section on pātālakhanda, but it is not made clear how this segment fits in. Is it perhaps related to the pātālabheda (see vs. 317)? The passage that follows would speak for such an interpretation: not only is the picumata mentioned here, also the definition of Kulas (205-207ab) and Kramas (207ff) points to the "secret" lower face. Against this interpretation stands vs. 219, where it is said that "this western face has summarily been taught".

220-247 24 Daksinatantras.

248-270ab 24 Vāmatantras.

270-285 Sixty-four Tantras of the sādāśivam cakram. The list is quoted in TAV 1.18, but with several discrepancies.

286-328 The last portion contains a list of eight plus one "Kaulas" (309-311). and an important statement for our purpose in 315-317, where it is said that the system of six streams, namely the five plus the lower, is superior to the five streams. This conclusion, namely that the Saiva revelation consists of six stream is reiterated in the penultimate verse (327).

Appendix 3 Bibliography

Only very few abbreviations are used in this thesis, because it was thought that the waste of paper produced by repeating the names of texts was insignificant in comparison with the time necessary to memorize idiosyncracies. The texts that are mentioned on almost every page are of course abbreviated: TĀ (Tantrāloka), TĀV (Tantrālokaviveka), ĪPK/ĪPV/ĪPVV (Īśvarapratyabhijīā-kārikā, -vimarśinī, -vivṛtivimarśinī), PTV (Parātrinsikāvivaraṇa). Mālinī or Mālinītantra is often used instead of the full name Mālinīvijayottaratantra. MW stands for MONIER-WILLIAMS', and pw/PW for the shorter and longer dictionaries of BÖHTLINGK.

Where possible the texts were quoted according to verse numbering. Especially in the case of the *Tantrālokaviveka* this seemed advisable, because the reprint of the main edition has been repaginated. One exception is TĀV on 1.18, where I have, because of the length of the passage, also given the page numbers according to the reprint. The PTV has been quoted according to the page numbers of the KSTS edition, because this pagination is reproduced in GNOLI's new critical edition and has the advantage of being a smaller unit. References to the *Brhadvimarsini* are given according to volume and page. The resolution of Sandhi in the KSTS has not been changed.

References to the Mālinīvijayavārttika are indicated by italic numbers and refer by default to the first Kānda.

Sanskrit Texts

If more than one edition is given, the reference is always to the one mentioned first,

Ajadapramātṛsiddhi → Siddhitrayī Artharatnāvalī → Nityaṣoḍaśikārṇava Astaprakarana Astaprakaranam, ed. Vrajavallabha Dvivedī, Varanasi 1988 (Yoga-
